

QuickStats

FROM THE NATIONAL CENTER FOR HEALTH STATISTICS

Percentage* of Children and Adolescents Aged 5–17 Years Who Had Ever Received a Diagnosis of Attention-Deficit/Hyperactivity Disorder, by Sex and Year — United States, 2019–2025

Abbreviation: ADHD = attention-deficit/hyperactivity disorder.

* Estimates are based on household interviews of a sample of the civilian, noninstitutionalized U.S. population.

From 2019 to 2025, the percentage of children and adolescents aged 5–17 years who had ever received a diagnosis of ADHD increased from 9.9% to 13.8%. The percentage of boys and girls with ADHD diagnoses increased throughout this period; a higher percentage of boys than girls had ever received a diagnosis of ADHD.
