

MONKEYPOX MODULAR CASE INVESTIGATION TOOL

Use this tool to gather important information on a person under investigation (PUI) for monkeypox or for a confirmed case of monkeypox. It is organized in 9 modules to obtain detailed information about the patient, identify exposure events that may have led to transmission, and characterize the population(s) in which the disease is spreading. You may choose to include or omit modules and questions as appropriate given the context of the investigation.
