Venous Thromboembolism: Know the Risks, Signs & Symptoms of Blood Clots

Know the Lingo About Blood Clots

Deep vein thrombosis (DVT): Blood clot located in a deep vein, usually in a leg or arm. DVT and PE are also known as VTE (venous thromboembolism).

Pulmonary embolism (PE): Blood clot that has traveled from a deep vein to a lung.

Blood Clots Affect Many People

900,000 EACH YEAR
VTE affects as many as 900,000 Americans each year.

100,000 PEOPLE DIE EACH YEAR
As many as 100,000 people die of blood clots each year.

Everyone Is at Risk. Some Factors Can Increase This Risk.

• Hospitalization and Surgery
  One-half of blood clots occur during or soon after a hospital stay or surgery.

• Being Immobile
  Not moving for long periods of time (for example, extended bed rest or extended travel).

Other Risk Factors

• Older age
• Overweight or obese
• Family history of VTE
• Recent or recurrent cancer
• During and just after pregnancy
• Estrogen-based medicine such as hormonal birth control or hormone replacement therapy
• Injury and trauma
• During and just after pregnancy
• Estrogen-based medicine such as hormonal birth control or hormone replacement therapy
• Injury and trauma
• Recent or recurrent cancer
• Family history of VTE
• Overweight or obese
• Older age

Know the Signs, Symptoms and Risk Factors

DVT Symptoms

• Swelling
• Pain
• Tenderness
• Redness of the skin

PE Symptoms

• Difficulty breathing
• Faster than normal or irregular heartbeat
• Chest pain or discomfort, which usually worsens with a deep breath or coughing
• Coughing up blood
• Very low blood pressure, lightheadedness, or fainting

What You Can Do to Prevent Death or Complications of a Blood Clot

Know your risks and recognize symptoms.

Before any surgery, talk with your doctor about blood clots.

Tell your doctor if you have risk factors for blood clots.

If you have any symptoms, see your doctor as soon as possible. Blood clots can be safely treated by your doctor.
