

SET-NET SUCCESS STORY, PENNSYLVANIA – Audio Description Transcript

In Pennsylvania, substance use disorder is on the rise in communities.

This can put people at risk for hepatitis C infections during pregnancy.

Now, because of SET-NET...

Pennsylvania health officials can monitor the impact of hepatitis C on mothers and babies and can link families to treatment and testing after delivery.

Because of SET-NET, Pennsylvania now has the data and resources to respond quickly, so that more families are connected to the care they need to live longer, healthier lives.

SET-NET: Using Data to Care for Pregnant People and Babies
