

SET-NET SUCCESS STORY, WASHINGTON – Audio Description Transcript

When COVID-19 hit, the processes in place because of SET-NET helped health officials in Washington respond quickly to understand how COVID-19 affected pregnant people and their babies.

The SET-NET team connected with other experts throughout the health department and trained the necessary staff so they could all work together to ensure that moms and babies stayed healthy.

SET-NET helps protect moms and babies—not only from COVID-19 but from any future emergencies that have the potential to harm them.

“We are confident this is something that we can quickly deploy to address any rising threat to mothers and babies.” - Debbie Mbotha, Project Coordinator, Washington State Department of Health

SET-NET: Activating Systems to Protect Pregnant People and their Babies
