

Table 12.
Measure of Association with Infection Status Among Case and Comparison Subjects*

Population of Interest	Number of Case Subjects		Number of Comparison Subjects		Odds Ratio(Positive vs. Negative)	95% CI	P-value
	Positive for EBV	Negative for EBV	Positive for EBV	Negative for EBV			
Children	5	8	27	20	0.41	(0.07-1.92)	0.32

* The results of all other viral testing were negative. Therefore statistical analysis could only be using EBV serology results.
