

Environmental Health

Dedicated to the advancement of the environmental health professional

Volume 76, No. 10 June 2014

ABOUT THE COVER

Our cover this month emphasizes an important point that the authors of our feature, "Incorporating Community-Based Participatory Research Principles [CBPR] Into Environmental Health

Research: Challenges and Lessons Learned From a Housing Pilot Study," make about CBPR: it is rooted in the communities that are active participants as well as subjects of environmental health research. The authors' goal was to collaborate with residents of both green-built and conventional low-income housing to determine differences in chemical exposure and biological agents. The authors also aimed to explain to residents how to reduce their exposure and therefore improve health outcomes.
