

Environmental Health

Dedicated to the advancement of the environmental health professional

Volume 76, No. 7 March 2014

ABOUT THE COVER

In this month's cover feature, "Health and Housing Outcomes From Green Renovation of Low-Income Housing in Washington, DC," the authors investigated the

connection between health outcomes and environmentally conscious renovation of apartments in the nation's capital. They found significant improvements from baseline to one year after renovation in health, housing, and allergens. The authors' results suggest that widespread implementation of green housing principles will likely result in substantial health gains and housing improvements, especially for low-income at-risk populations where disparities are most pronounced. The housing pictured on our cover is from a similar project in Chicago, the Rosa Parks Apartments in the West Humboldt Park neighborhood. That project was also completed with green principles in mind.

See page 8.
