

Environmental Health

ABOUT THE COVER

In this month's cover feature, "Association Between Asthma Hospital Visits and Ozone Concentration in Maricopa County, Arizona (2007–2012),"

the authors evaluated the association between asthma hospital visits and ozone concentrations using time plots and distributed lag non-linear models while accounting for potential confounders including temperature and day of the week. The findings suggest exposure to ozone is associated with increased relative risk of asthma hospital visits lasting several days.

See page 8.
