

Environmental Health

Dedicated to the advancement of the environmental health professional

Volume 79, No. 3 October 2016

ABOUT THE COVER

As global generation of e-waste increases, its management becomes a significant challenge because of the many toxicants present in electronic devices.

This month's feature article, "E-Waste Management in the United States and Public Health Implications," reviews e-waste generation, current management practices and trends, policy challenges, potential health impact, and toxicant exposure in the U.S. With an estimated annual global production of e-waste to reach 65.4 million metric tons in 2017, this month's article provides environmental health with valuable and timely information on how to manage this growing public health concern.
