

(CDC Logo)

(Screen with map of United States and cities linked. Zoom out to world map with links crossing into Europe and South America.) We know foodborne illness is not just an inconvenience. People are dying. We've got to get more boots on the ground to stop these outbreaks and prevent them from happening to begin with. We want you to form an elite team to meet this challenge. And the timeline is yesterday.

(Animated female avatar) "I'm ready to roll."

(Animated male avatar) "We're on it."

(Screenshot of training log-in screen) Register today for CDC's free e-Learning called Environmental Assessment Training Series, or EATS!

(Screenshots of training) The training addresses the role of environmental assessments within the broader context of outbreak investigations and the food safety system.

This online course is designed specifically for environmental health professionals and food safety program officials in government agencies, as well as those from scientific, industry, and consumer groups.

The skills needed to participate in an outbreak investigation are different from those needed to inspect restaurants, and the role of environmental health staff is critical.

Register for this fun new training today and learn how to:

- Investigate foodborne illness outbreaks as a member of a larger outbreak response team,
- Conduct interviews with food workers to uncover critical information,

- Identify an outbreak's environmental causes, and
- Recommend appropriate control measures.

Practice applying critical environmental assessment skills in multiple outbreak scenarios.

As you complete sections, you will be awarded points toward a badge; you can also earn continuing education credits. AND it's free!

What are you waiting for? Register today!
