

A Framework for integration?

Three levels of Service Integration

- **Level 1: Nonintegrated services**
 - Prevention services are completely separate or not integrated at the point of client care
- **Level 2: Core integrated services**
 - Basic package of services that integrates two or more CDC-recommended HIV/AIDS, viral hepatitis, STDs, and TB prevention, screening, testing or treatment services into clinical care
- **Level 3: Expanded integrated services**
 - Comprehensive package of best and promising evidence-based practices of prevention, screening, testing, or treatment services integrated into general and social services
