

2017-20 Pre-Pandemic Data – Data Release Plan

2017-20 Pre-Pandemic Data – Data Release Plan

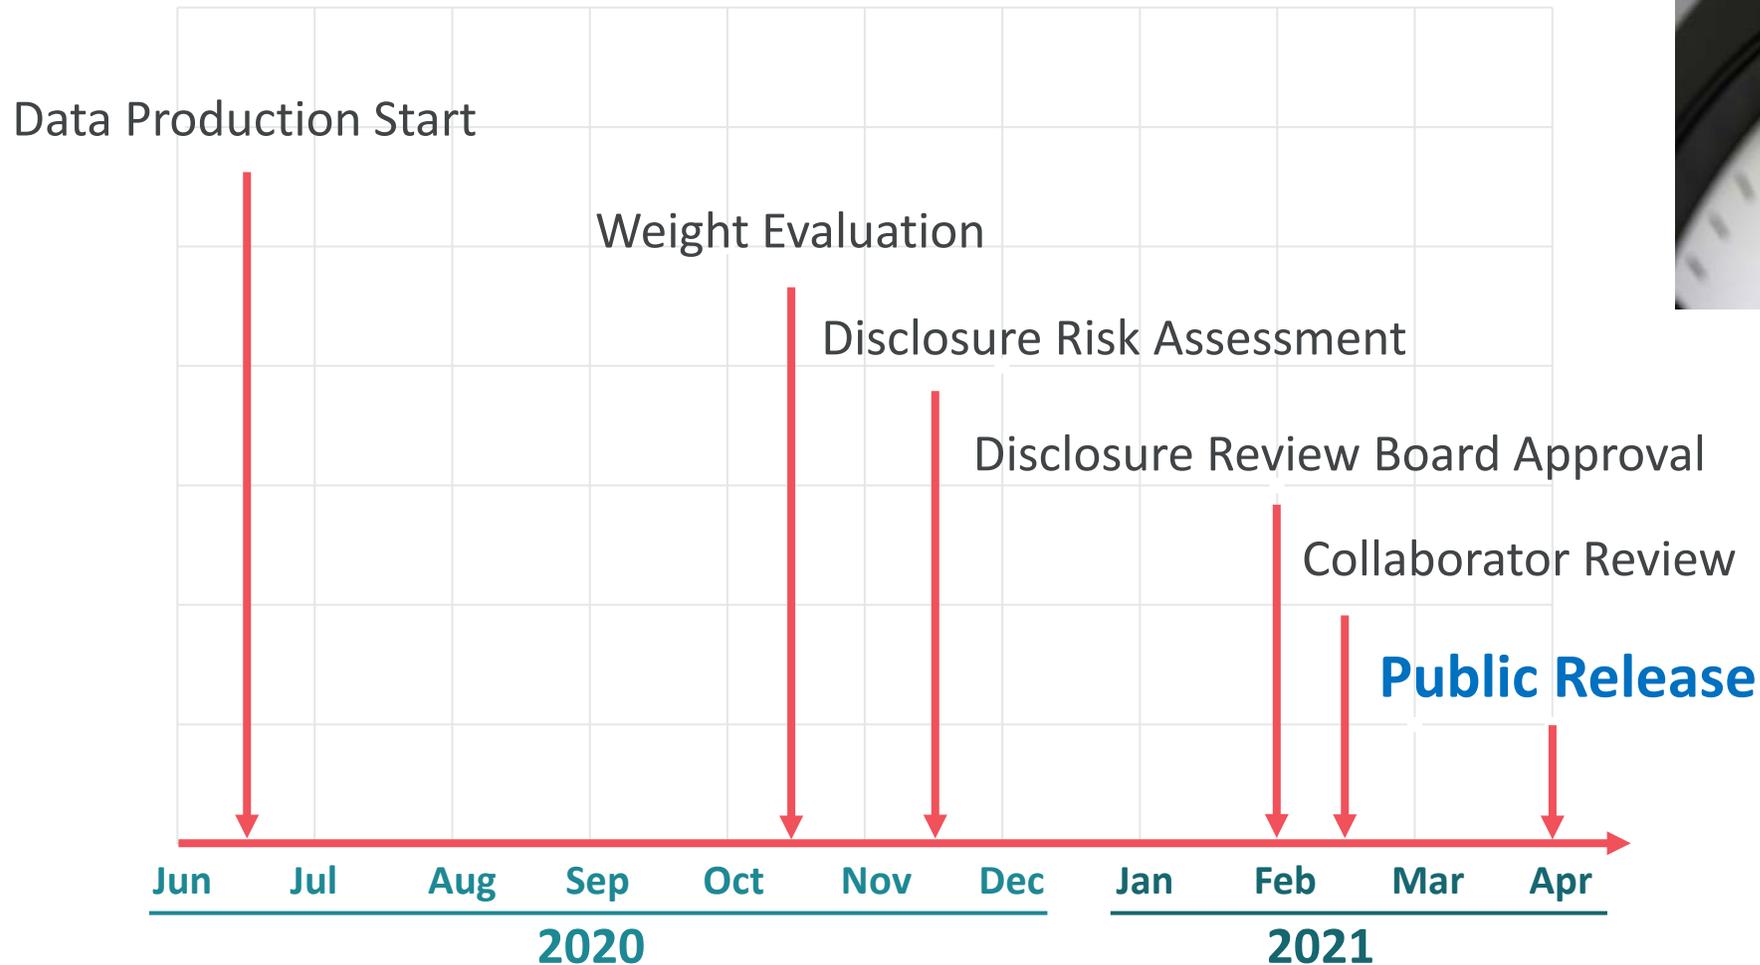

For components that were collected in both 2017-2018 and 2019-2020:

- Combine data from NHANES 2019-2020 with the NHANES 2017-18 data to form a 4-year nationally representative sample of NHANES 2017-2020.

For new components in 2019-2020:

- Make data available as a convenience sample since the completed data collection in 2019-2020 did not yield a nationally representative sample.

Timeline – First Wave Release for 2017-20 Pre-Pandemic Data

2017-20 Pre-Pandemic Data – Data Release Plan

Priority datasets planned to be released in the first wave:

Demographic Variables and Sample Weights

Examination Data

- Body Measurements
- Blood Pressure - Oscillometric Measurements
- Oral Health - Dentition
- Oral Health - Recommendation of Care

Questionnaire Data

- Blood Pressure and Cholesterol
- Diabetes
- Oral Health

Lab Data

- Fasting Information
- Glycohemoglobin
- Plasma Fasting Glucose
- Cholesterol – HDL
- Cholesterol – Total

Questions for BSC

- **Thoughts related to messaging about the file**
 - Stand-alone analysis of 2019-2020 data not possible (implications for trend analyses)
- **Interpretation of estimates**
 - What language should be used about the time period represented (i.e., most of 2020 missing)
