

# How Comparable Are the Data?

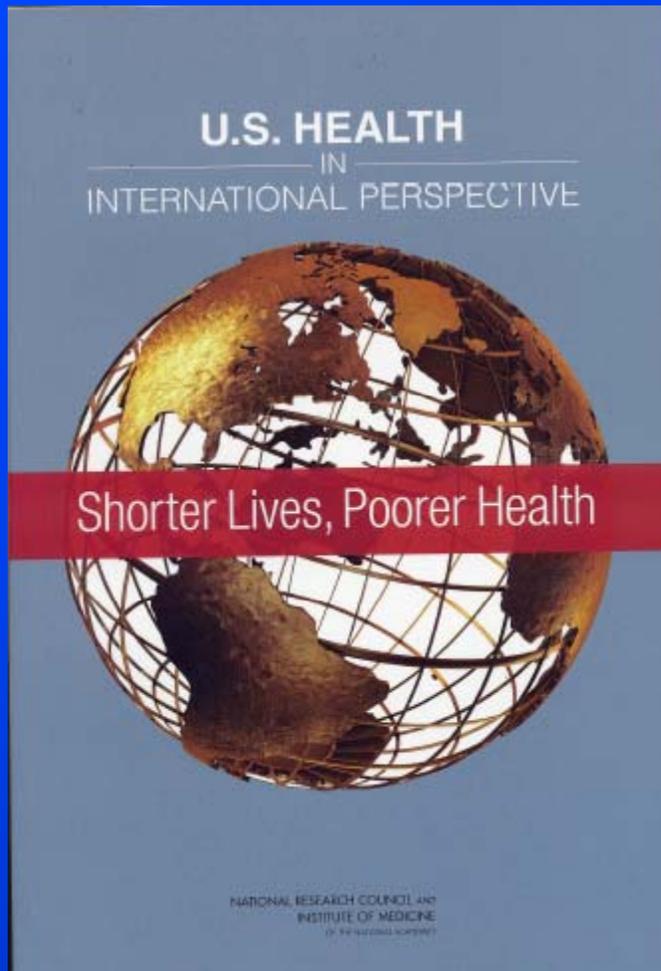

## NCHS and International Comparability

---

**Sam Notzon**

**Board of Scientific Counselors  
National Center for Health Statistics, CDC**

- Recommendation 1:**
- **NIH and NCHS to work with international partner to improve data quality and consistency to enable accurate comparisons**

# Improving International Comparability:

**Goal: Improve the quality and comparability of our own data and that of other countries**

- **Collaboration with international organizations**
  - OECD
  - WHO
  - UN
- **International collaborations**
  - International Collaborative Efforts (ICEs)
  - Others
- **Bilateral collaborations**

# NCHS and OECD

- **NCHS coordinates and supplies data on behalf of the United States to OECD**
  - **Leadership roll in overall data collection – Sam Notzon**
  - **Guidance and consultation in Health Care Quality representing HHS – Ed Sondik**

# The Organisation for Economic Co-operation and Development (OECD)

- Established in 1961
- Headquarters: Paris
- Membership: 34 countries
- Budget: EUR 347 M
  - US contribution: 25%
- Secretary-General: Angel Gurría

# OECD: Mission

- To promote policies that will improve the economic and social well-being of people around the world
- 34 member countries provide a forum in which governments can work together, share experiences and seek solutions to common problems.
- Focus on understanding the drivers of economic, social and environmental change.

# OECD: Current Membership

# OECD Health Database NCHS Roles

- Coordinator of US data supplied to OECD  
-- Sam Notzon
- Health care quality measures: Chair of OECD Health Care Quality Indicators Working Group – Ed Sondik
- Membership in various Health Care Quality Subcommittees on
  - Patient safety
  - Cancer care
  - Care for communicable diseases
  - Care for chronic conditions
  - Prevention

# OECD Health Database

## Examples of data supplied by NCHS

Life expectancy at birth

Premature mortality

Mortality from various causes

Infant mortality

Low birth weight

Perceived health status

Prevalence/incidence of selected diseases

Tobacco and alcohol use

Overweight/obesity

Hospital and care statistics

Selected avoidable admissions

Obstetric trauma

Screening, survival and mortality for breast and cervical cancers

Screening, survival and mortality for breast cancer

Immunizations for children and adults including

Measures of access to care

Waiting times

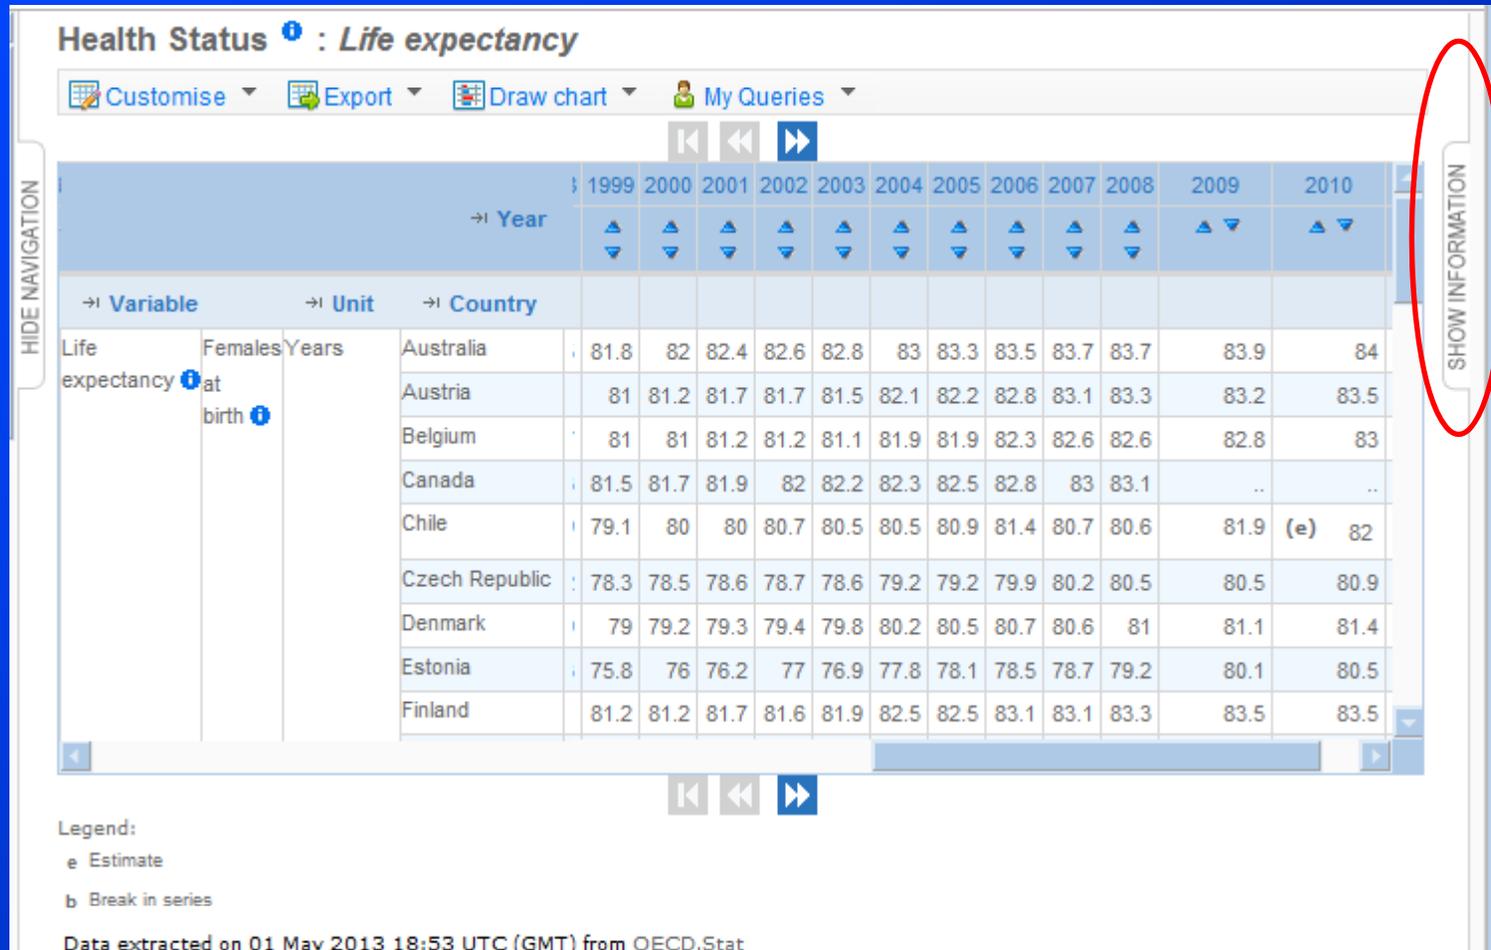

# OECD Health Database:

- Includes definition for each data item
- “Sources and Methods” documents variation from OECD definitions
- Annual meeting of “Health Data Correspondents” to highlight:
  - Recent developments
  - Data trends
  - Data comparability

# Health at a Glance Biannual report

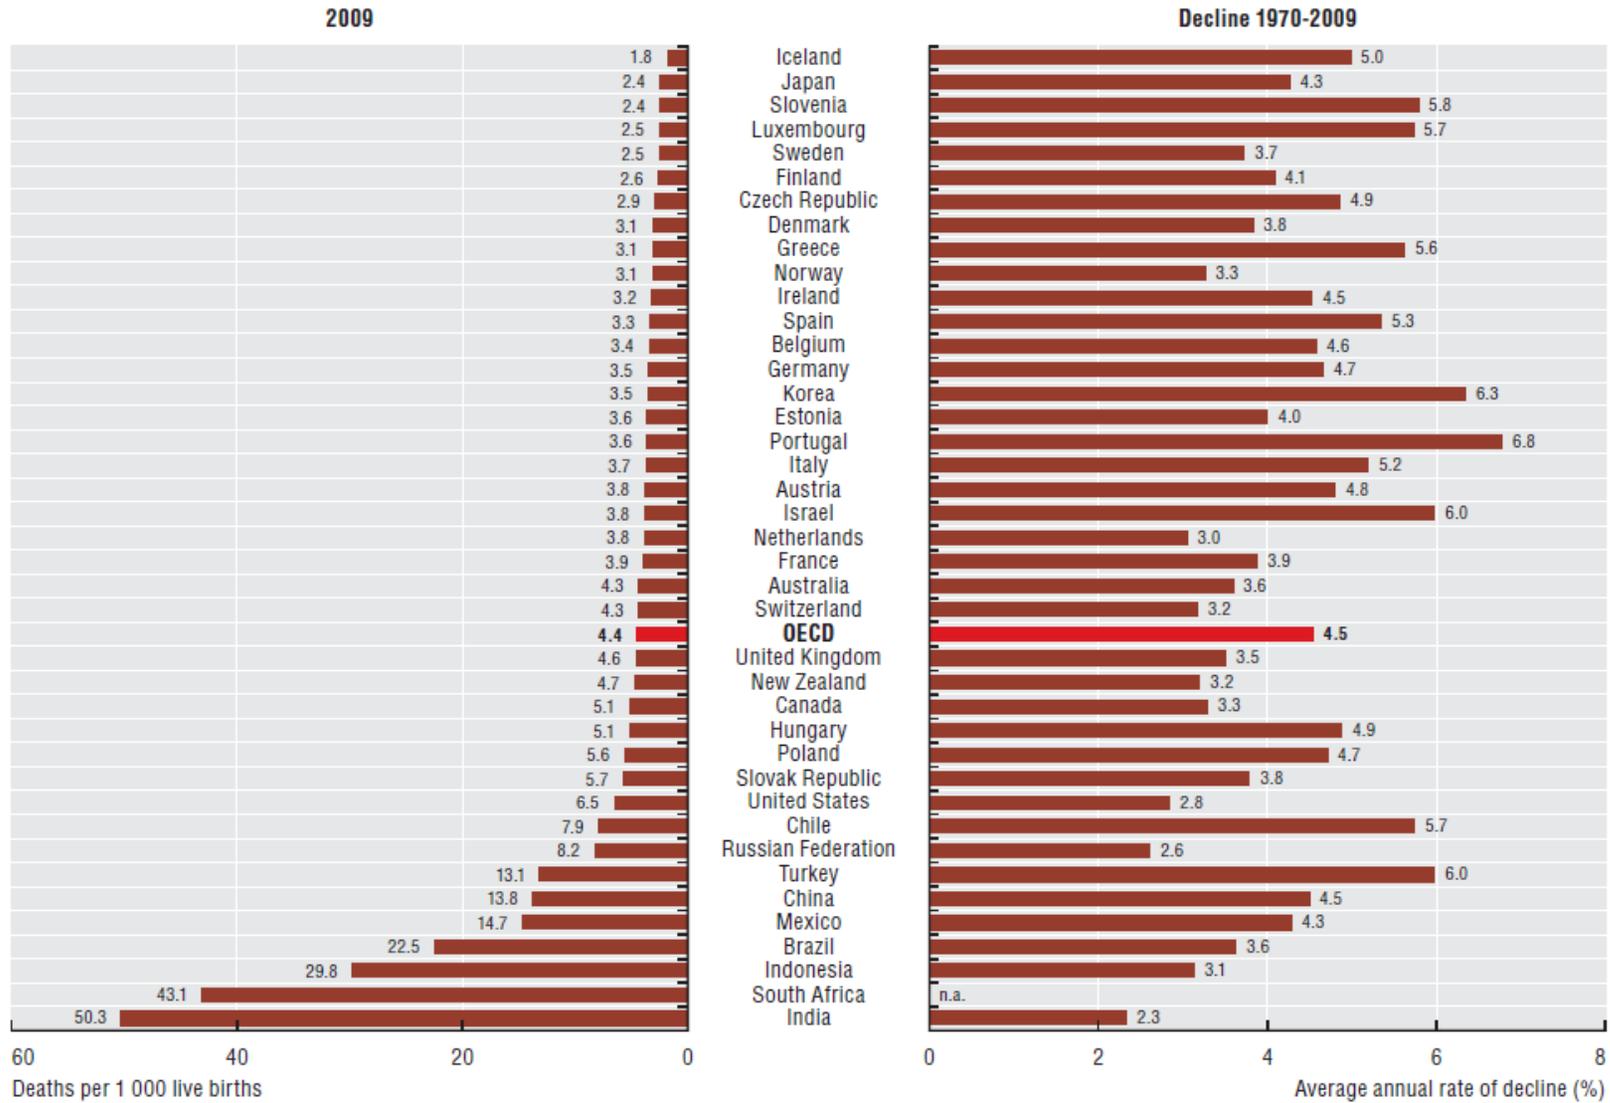

- Chapters --
- 1. Health Status
- 2. Non-medical Determinants of Health
- 3. Health Workforce
- 4. Health Care Activities
- 5. Quality of Care
- 6. Access to Care
- 7. Health Expenditure and Financing

# Example: Infant Mortality

## 1.7.1 Infant mortality rates, 2009 and decline 1970-2009 (or nearest year)

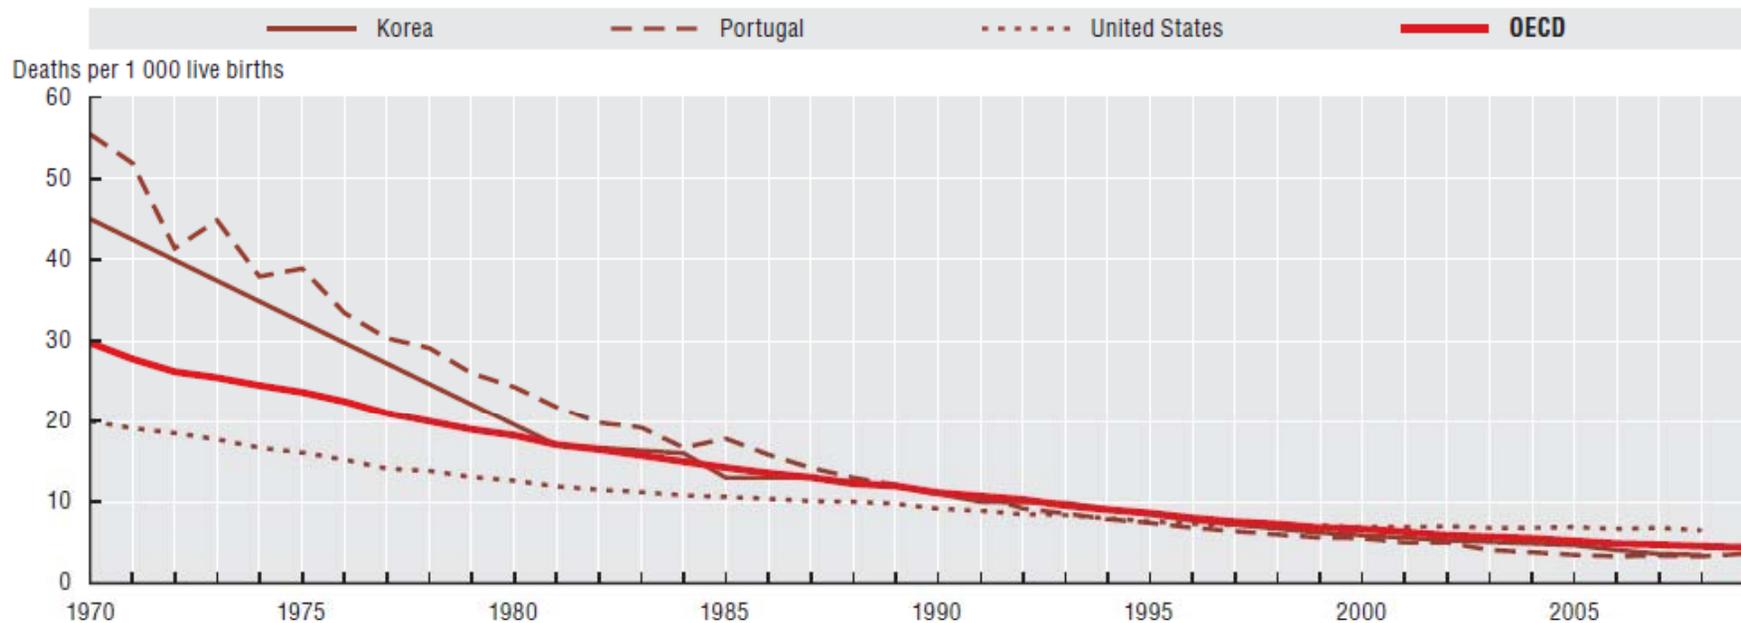

Source: OECD Health Data 2011; World Bank and national sources for non-OECD countries.

# Example: Infant Mortality

1.7.2 Infant mortality rates, selected OECD countries, 1970-2009

Source: OECD Health Data 2011.

# Example:

## Chapter 2: Non-medical Determinants of Health

### Tobacco, Alcohol and Overweight

2.3.1 Prevalence of obesity among adults, 2009 (or nearest year)

Source: OECD Health Data 2011; national sources for non-OECD countries.

Stateline <http://dx.doi.org/10.1767/888932523956>

# World Health Organization

- WHO-FIC (Family of International Classifications) Collaborating Center
  - International Classification of Diseases
    - Dates to 19<sup>th</sup> century – one of the first examples of statistical harmonization
    - NCHS supports improved comparability of morbidity and mortality data
    - NCHS contributions to development of ICD11
  - International Classification of Functioning

# United Nations

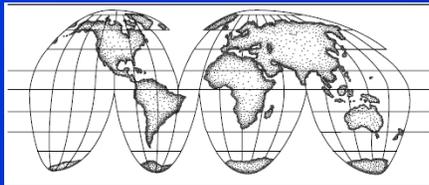

- **Washington Group on Disability Statistics**
- **Involves cooperation between NCHS and the UN Statistics Division and many participating countries**
- **In operation since 2001**

# International Collaborations: ICEs

## Goals:

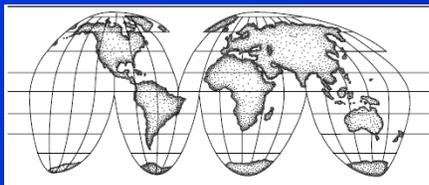

- Apply lessons learned to improve NCHS data quality
- Improve international comparability of data

# International Collaborations: ICEs

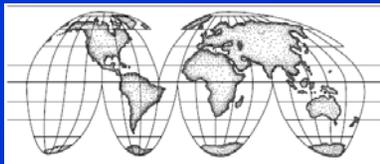

## Topics:

- Perinatal and Infant Mortality
- Aging Statistics
- Injury Statistics
- Automation of Mortality Statistics

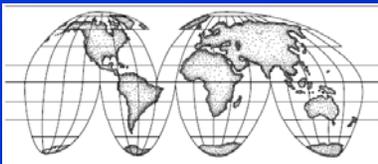

# ICE on Automation:

- In existence since 1996
- Ten member countries
- Promotes the use of automated coding for mortality data
- MMDS, the US system, is used in most English-speaking countries
- Provides forum for discussion of issues related to automated coding

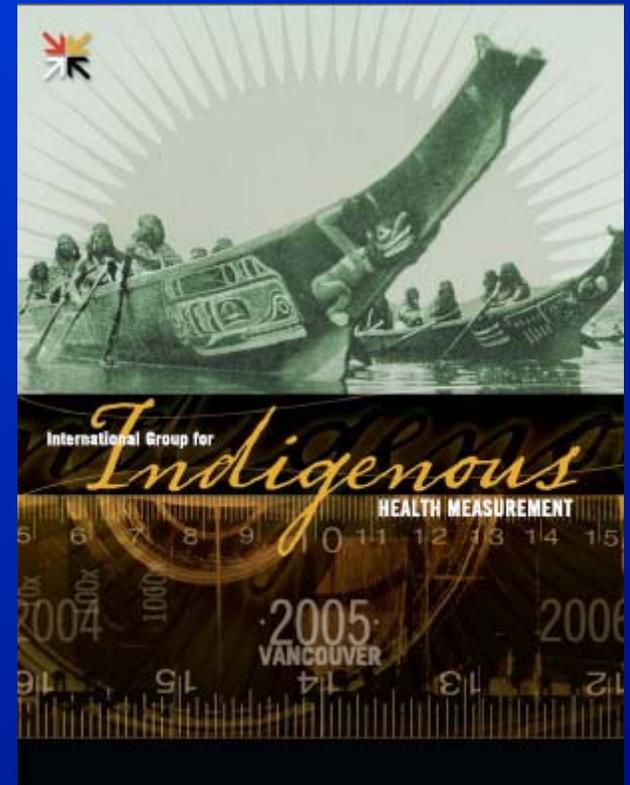

# ICE on Automation:

- Has demonstrated that automation greatly improves coding consistency, quality, and comparability
- Has succeeded in its mission to convince countries of the need for automated coding
- Working with other countries has improved US interpretation of WHO coding rules, leading to greater data comparability
- Has led to development of IRIS, an automated system based on the MMDS but with multilingual capability

# Indigenous Health Measurement

- Started in 2005
- Technical lobbying group from Australia, Canada, New Zealand, USA
- Share experiences, problems, solutions
- Indigenous and non-Indigenous members, includes statistical agencies
- Aim to improve health data quality and comparability for Indigenous populations

# US-Canada Collaboration

- Annual Interchange meetings between NCHS and health statistics division of Statistics Canada
- Sharing of data ideas, discussion of data issues
- JCUSH survey is a model of data comparability:
  - Identical questionnaire, jointly developed
  - Joint cognitive testing
  - Same interviewers in both countries
  - Shared data analysis
