

# NHANES 2023

## The Future is Now

June 20, 2018

Kathryn S. Porter, MD, MS,  
Director, DHANES

# Overview

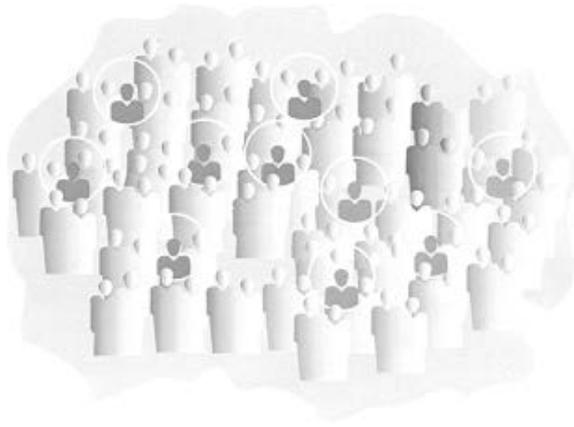

- Background
- Opportunity
- Market research
- Innovations from NHANES Longitudinal Study – Feasibility Component
- Multiple paths forward
- Core content for NHANES 2023+
- Discussion

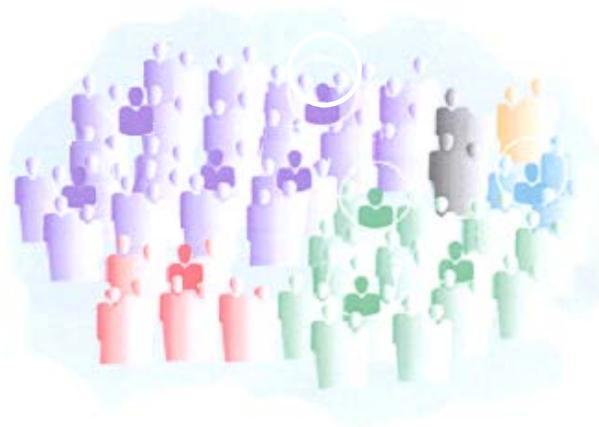

# Background

# NHANES sample design and selection

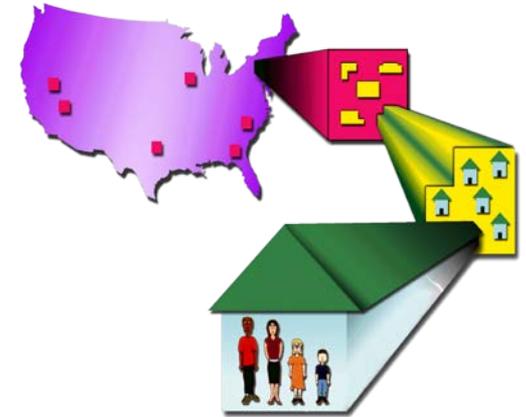

Probability sampling

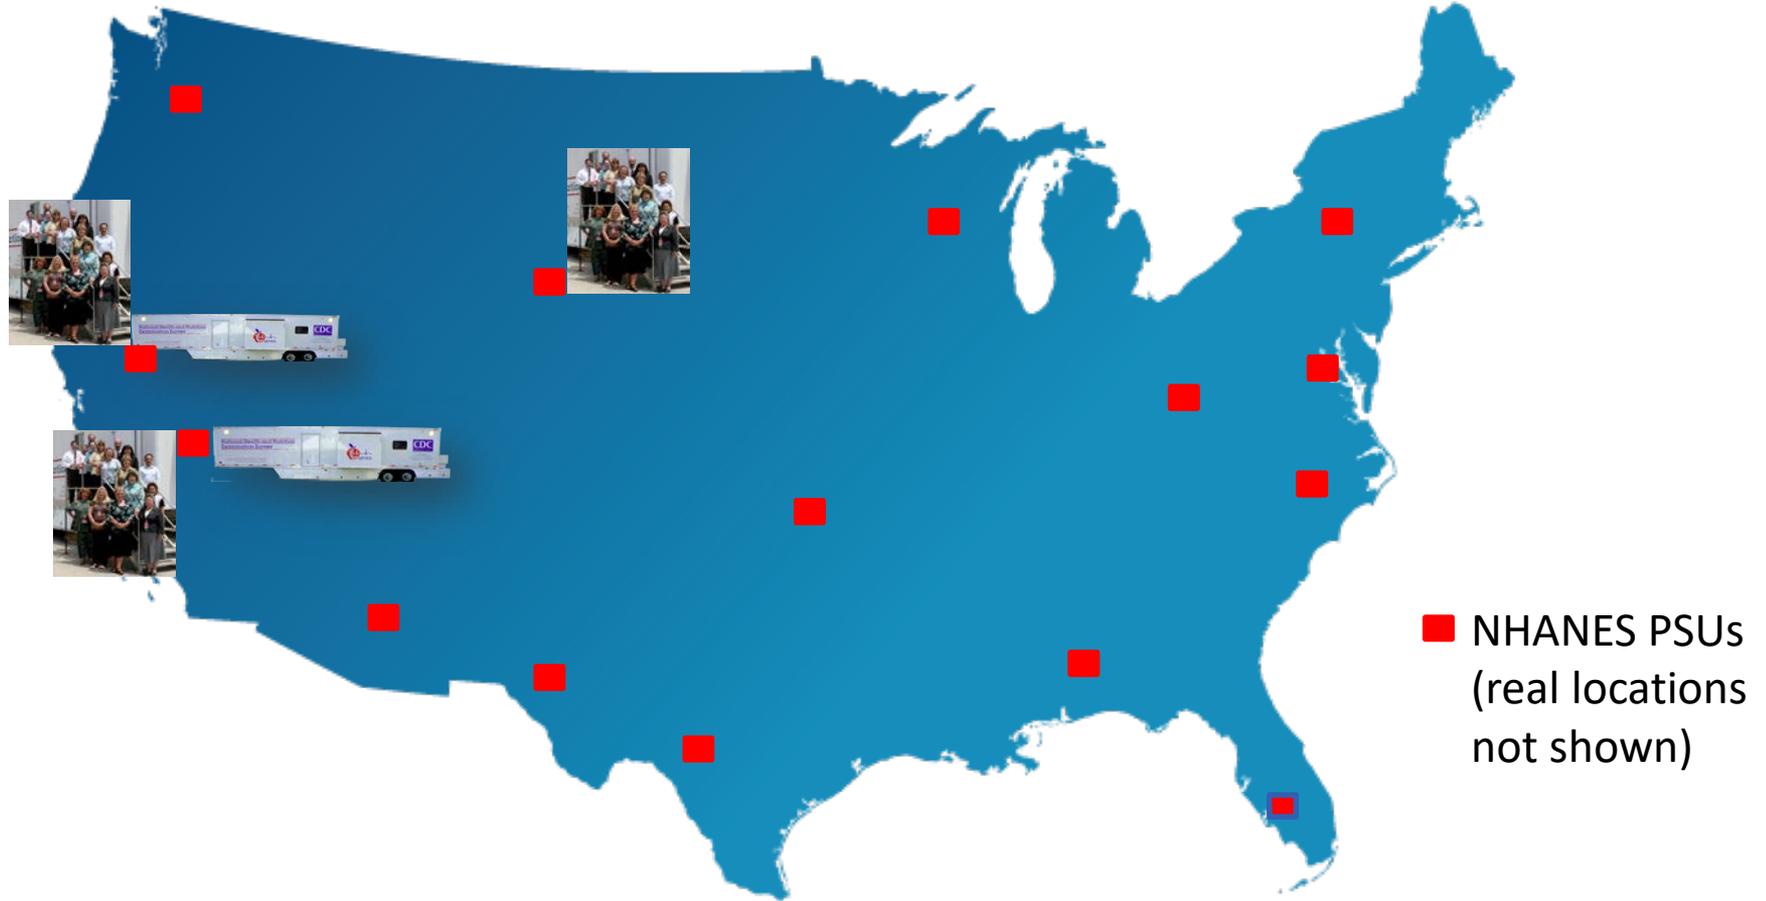

Domain sampling

Multistage, stratified, clustered design

# Data collection: work in three locations @ time

# Limitations

- Few PSUs, highly clustered sample
- A lot of screening required to meet target domains
- Limited time to do field work in each location
- Lately not meeting our annual target of examined participants
  - Declining response rates
- Difficult to produce estimates from two-year cycles
- Expensive

**Opportunity**

# Opportunity

- Current data collection contract ends after the NHANES 2021-22 cycle
- Need a new contract for NHANES 2023 and beyond
- April 2020 – deadline for posting SOW to FedBizOpps if survey is redesigned

# Market Research

Request for Information - National Health and Nutrition Examination Survey (NHANES)

Solicitation Number: 2017-RFI-NHANES  
 Agency: Department of Health and Human Services  
 Office: Centers for Disease Control and Prevention  
 Location: Acquisition and Assistance Field Branch (Pittsburgh)

Changed

Oct 08, 2017 2:22 pm

Solicitation Number: 2017-RFI-NHANES Notice Type: Special Notice

Synopsis:  
 Added: Aug 14, 2017 4:27 pm  
 DEPARTMENT OF HEALTH AND HUMAN SERVICES (DHHS)  
 Centers for Disease Control and Prevention (CDC)  
 National Center for Health Statistics (NCHS)

Request for Information (RFI) No. 2017-RFI-NHANES  
 National Health and Nutrition Examination Survey - NHANES

Introduction:  
 This is a Request for Information (RFI) for market research purposes to obtain innovative/ "outside-the-box" ideas on the sample design and the data collection processes for the National Health and Nutrition Examination Survey (NHANES). It is not a request for proposal and does not commit the Government to issue a solicitation, make an award, or pay any costs associated with responding to this notice. All responses shall remain with the Government and will not be returned. Any contractor who provides a favorable response may be invited to NCHS for an oral presentation.

Response Due Date:  
 10/09/2017 2:00 PM EST

GENERAL INFORMATION

Notice Type: Special Notice  
 Posted Date: August 14, 2017  
 Response Date: Oct 09, 2017 2:00 pm Eastern  
 Archiving Policy: Automatic, 15 days after response date  
 Archive Date: October 31, 2017  
 Original Set Aside: N/A  
 Set Aside: N/A  
 Classification Code: A -- Research & Development  
 NAICS Code: 541 -- Professional, Scientific, and Technical Services/541720 -- Research and Development in the Social Sciences and Humanities

August 14, 2017

...to **obtain innovative/ "outside-the-box" ideas**

on the sample design and the data collection processes for the National Health and Nutrition Examination Survey...

# Responses to the RFI

---

- Several responses followed by open houses
- Themes:
  - Sample design
  - Data collection procedures
  - Gaining respondent cooperation

## Responses to the RFI:

# Themes on the Sample Design

---

- **Limitation:**

- Small number of PSUs → high levels of design effects

- **Solution:**

- Decrease clustering by increasing the number of PSUs (60 or 100 PSUs/2 yrs.) → favorable impact on the effective sample size

## Responses to the RFI:

# Themes on the Data Collection

---

### ■ **Limitation:**

- Only three Mobile Examination Centers (MECs), two are stationary collecting exam data for limited time in each location

### ■ **Solution:**

- Consider self-propelled vans to cover a larger number of PSUs, or
- Consider using brick and mortar fixed sites
- Consider a combination of:
  - in-home data collection w/ physical measures and specimen collection on a larger sample
  - a select number of specialized exams in MECs, self-propelled vans or fixed sites on a subsample of participants

## Responses to the RFI:

# Themes on the Data Collection

---

- **Limitation:**
  - High burden study
- **Solution:**
  - Consider electronic health records
  - Multi-mode data collection

## Responses to the RFI:

# Themes on Gaining Cooperation

---

- **Limitation:**

- High burden study

- **Solution:**

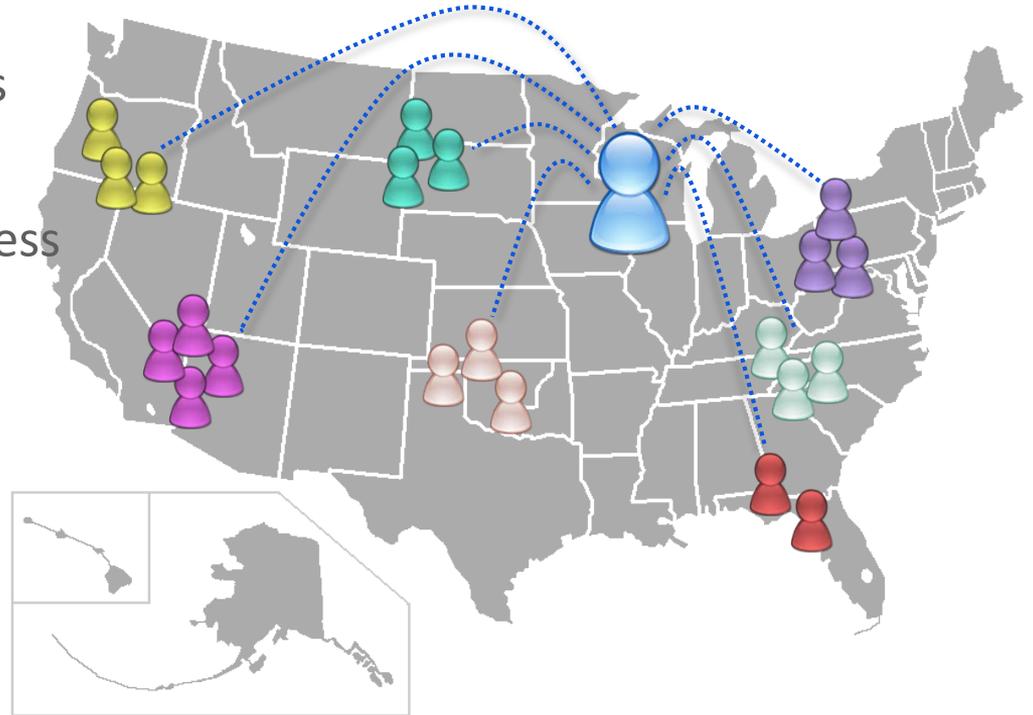

- Market segmentation to identify respondent groups and tailor recruitment materials accordingly
  - Outreach campaigns
  - Incentivize participants at the different stages (i.e. at the screener and interview) and not only after the completion of the exam
- 

**Innovations**

**NHANES Longitudinal Study – Feasibility Component**

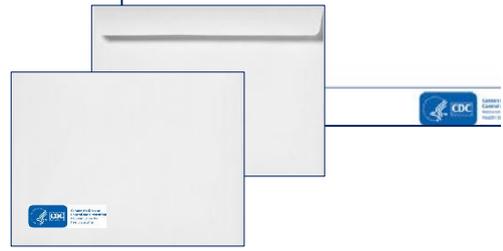

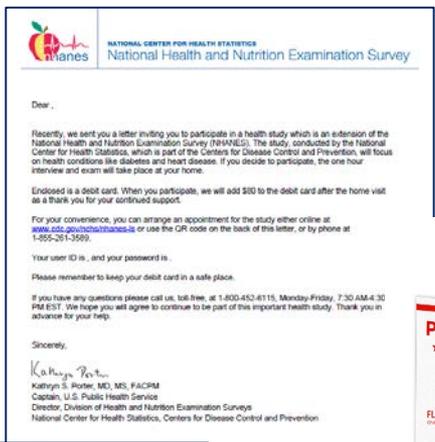

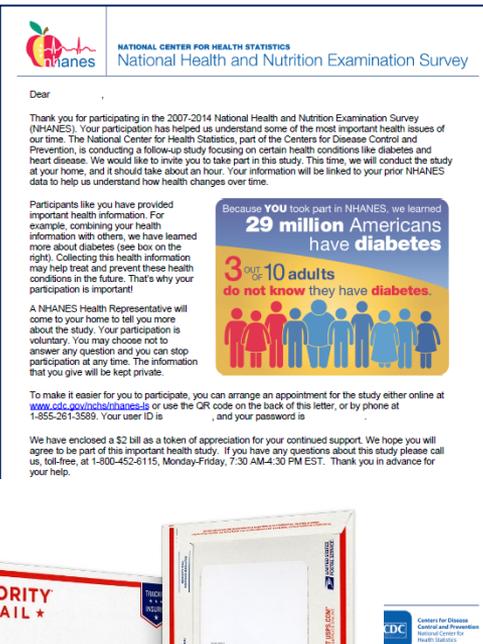

# Local health representatives with remote supervision

- Simultaneously carry out data collection at multiple locations
- Remote supervision
- Refresher training via web access

# Improved advance materials

- Race-Hispanic origin specific infographic embedded to highlight survey results
- Packaging materials with different design for each contact

# Staged incentives

- Pre-incentive of a two-dollar bill included in the first advance mailing
- Promised incentive with blank debit card included in the second advance mailing
- Initial Report of Findings at the end of home visit
- Final Report of Findings mailed in 3-10 weeks

## National Health and Nutrition Examination Survey Final Report of Findings

Date of Examination: 2/15/2016  
Participant Name: John Doe  
Participant Age at Home Visit: 73 years  
Participant Gender: Male  
SPID: 123456

### Body Measurements

Height from original NHANES exam: 5 ft. 7 in.  
Weight: 166.1 lbs.  
Body Mass Index (BMI): 26.0

Based on your height, your weight is within the range of a healthy weight.

Waist circumference: 33 in.

For men, a waist circumference greater than 40 inches is associated with an increased risk of health problems such as type 2 diabetes, high blood pressure, and cardiovascular disease. This is based on guidelines from the National Heart, Lung and Blood Institute, NIH, 1998

### Blood Pressure & Heart Rate

		Normal
Systolic Blood Pressure:	132 mm Hg	< 120
Diastolic Blood Pressure:	92 mm Hg	< 80
Resting Heart Rate:	74	

Your blood pressure on 2/15/2016 was above normal and was in the pre-hypertensive range. We suggested at that time that you see your doctor within the next six months to have your blood pressure rechecked.

### Foot sensation Tests

This sensory examination tests your ability to feel a filament pressed on the big toe of your feet. The examination showed that you have normal sensation in both of your feet.

### Laboratory Tests - Blood

	Result	Units	Flag	Reference Range
Hemoglobin A1c	6.8	%	High	< 6.5

### Laboratory Tests - Urine

	Result	Units	Flag	Reference Range
Albumin Creatinine Ratio	28	mg/g		< 30.00

### Laboratory Information

The following CLIA-certified laboratories performed the named tests on biologic specimens

Laboratory name Laboratory address	Hemoglobin A1c
Laboratory name Laboratory address	Urine albumin/creatinine ratio

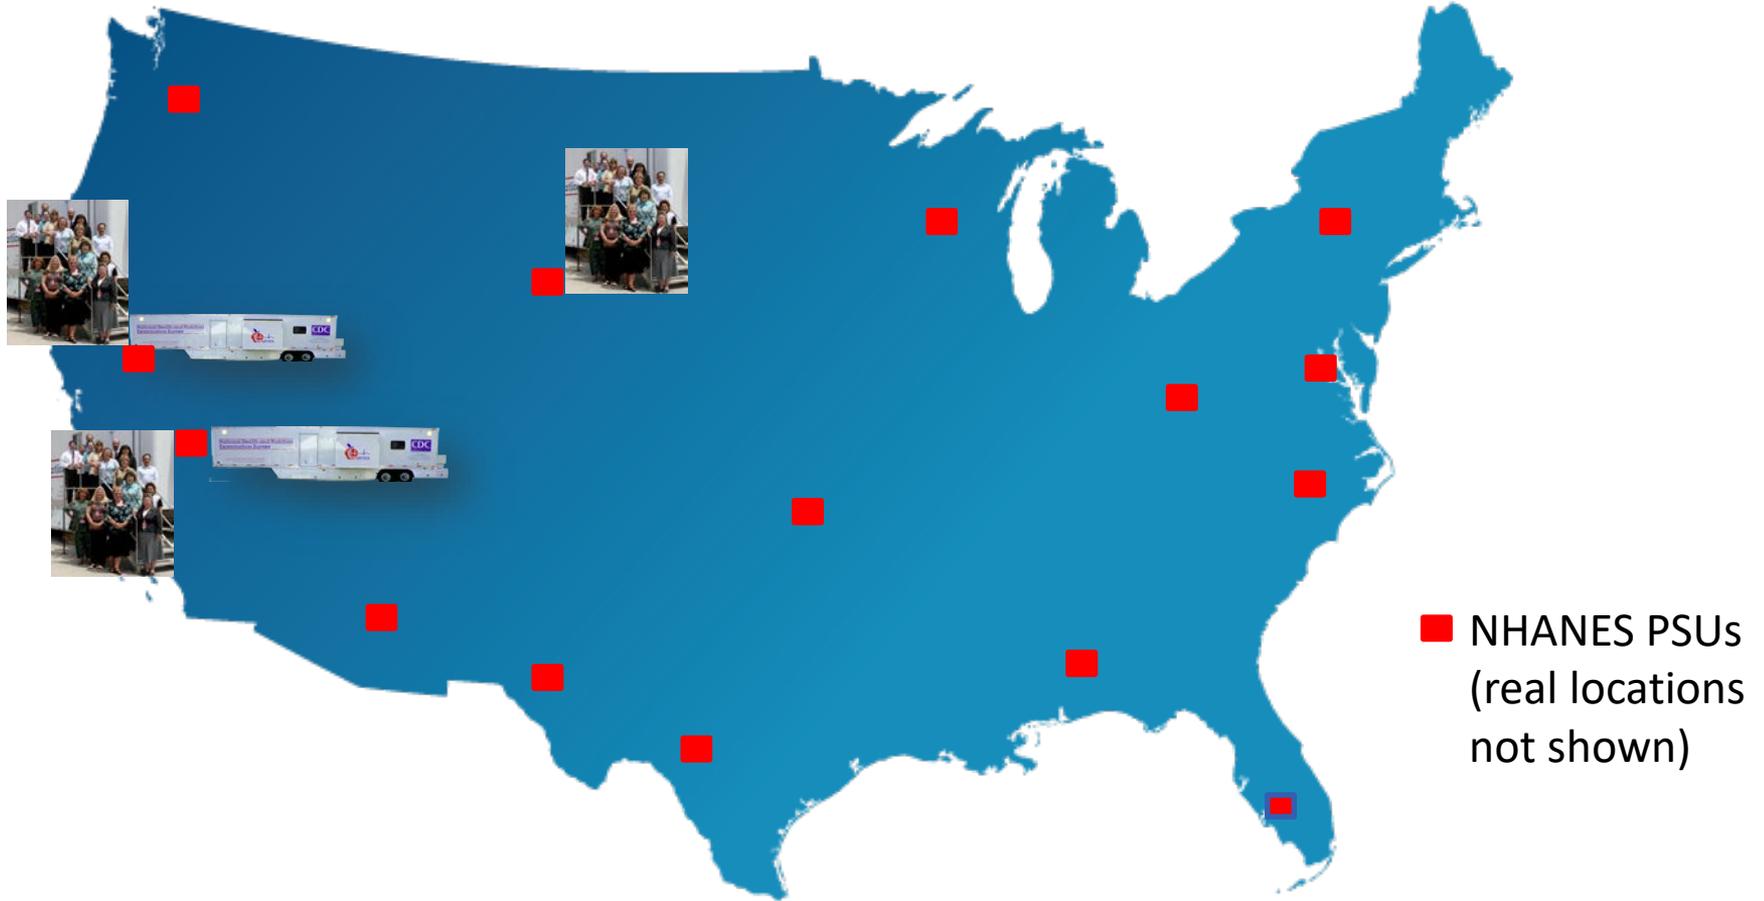

# Home exam: new components and specimen collection

- Measurements of weight, waist circumference and blood pressure, and a foot sensation assessment by monofilament
- Capillary blood and spot urine sample collection

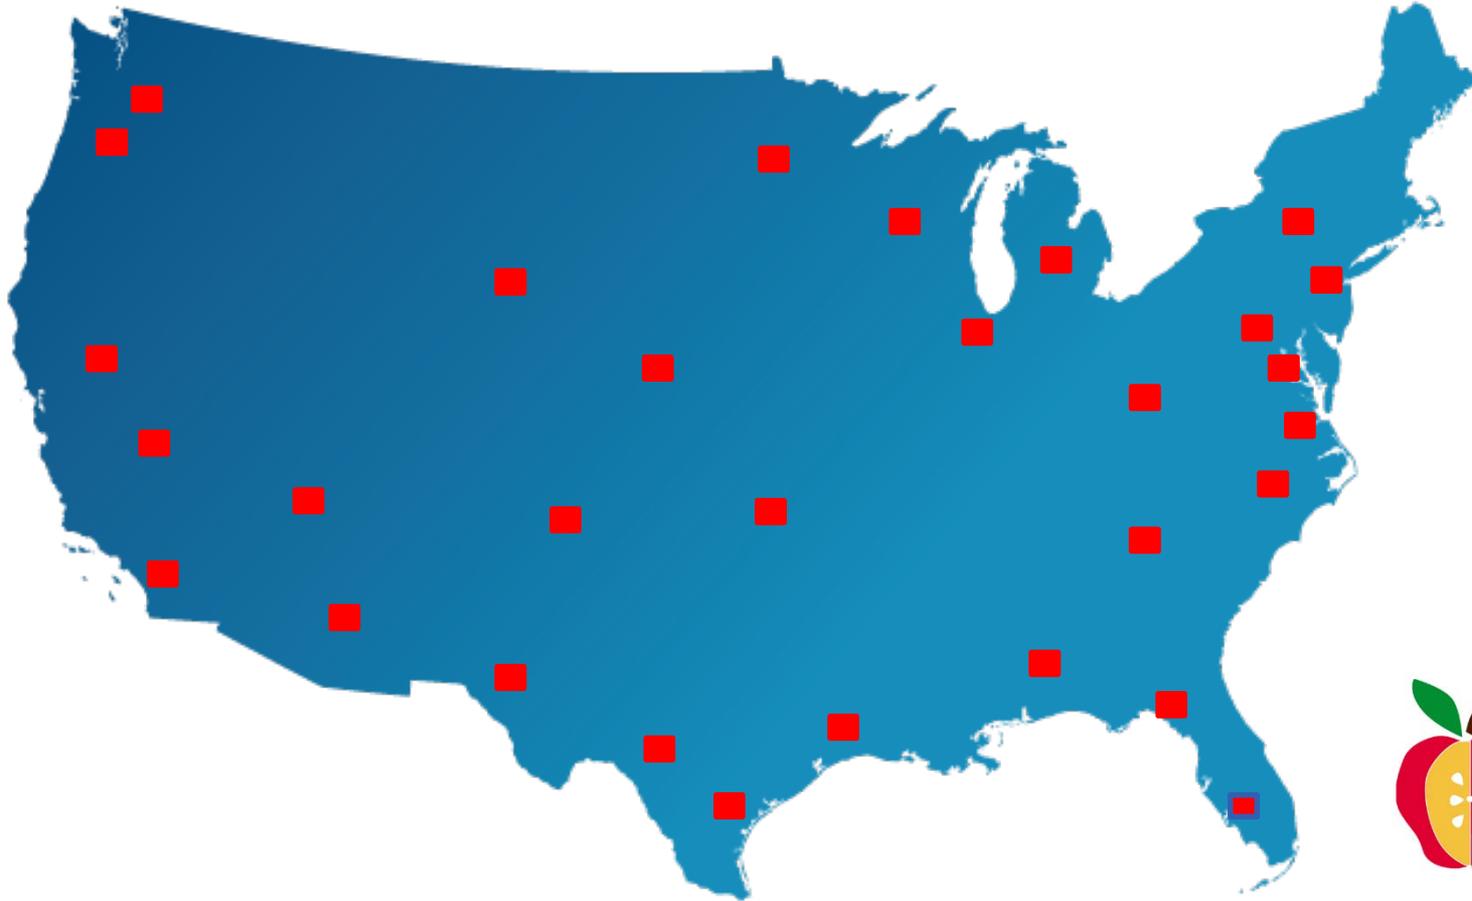

# Multiple Paths Forward

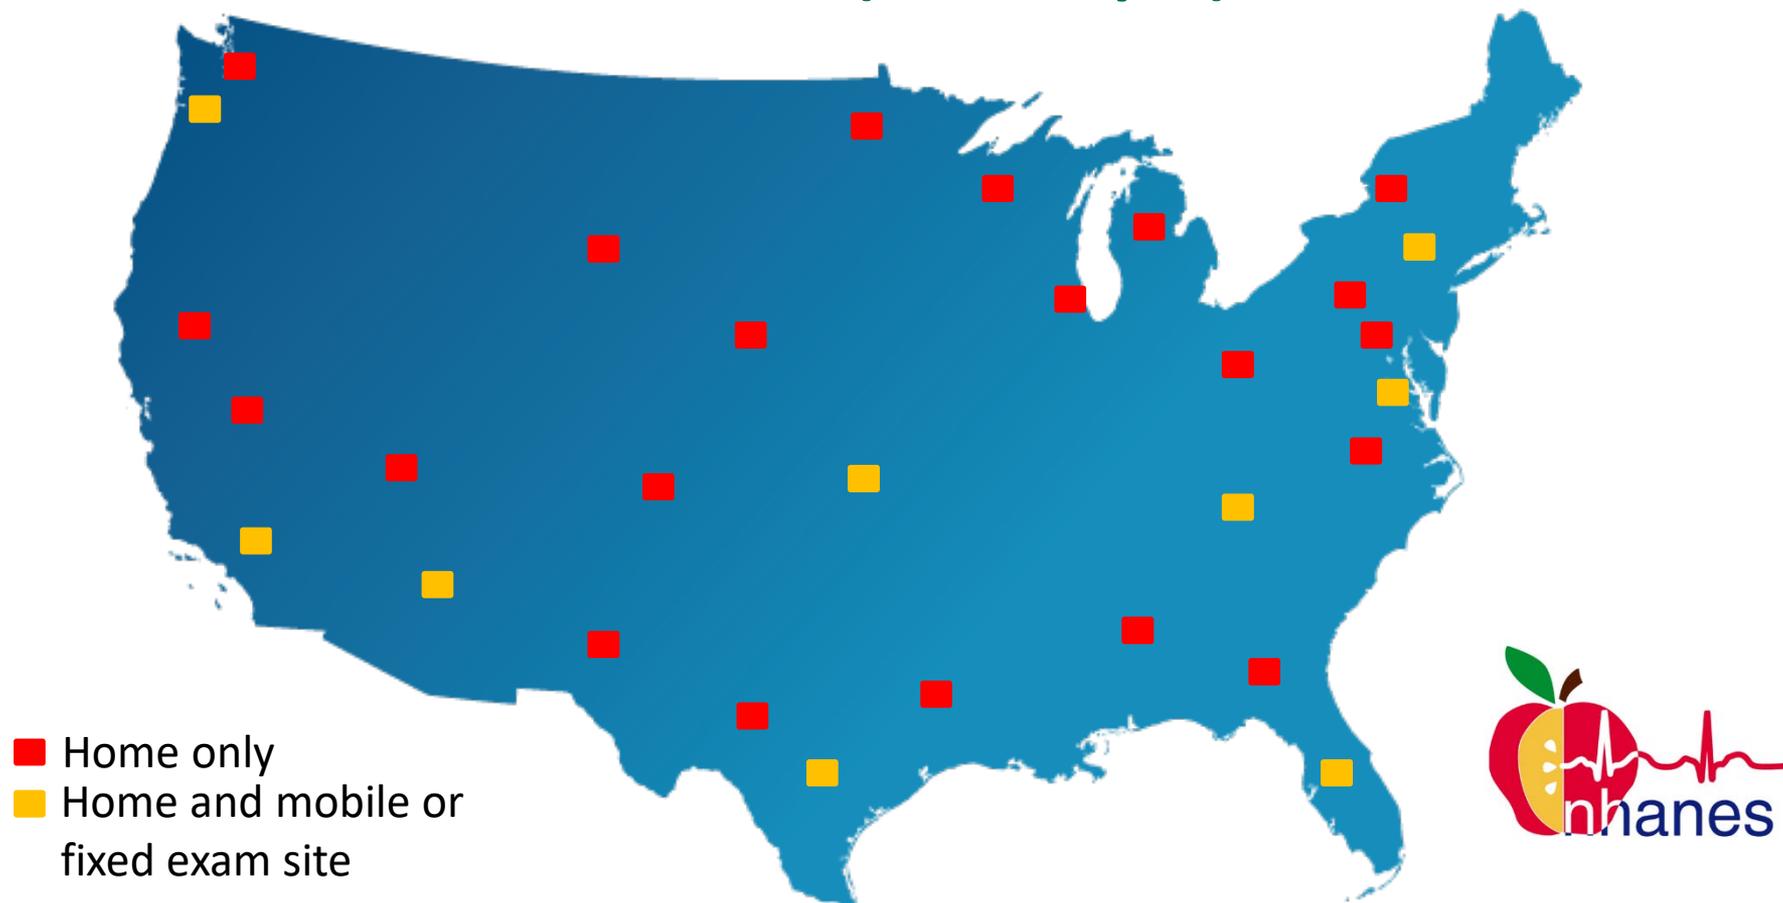

# 1. Keep the current design the same

## 2. Increase the number of PSUs

## 2a. Split design: Home-based data collection with mobile or fixed site exam (subsample)

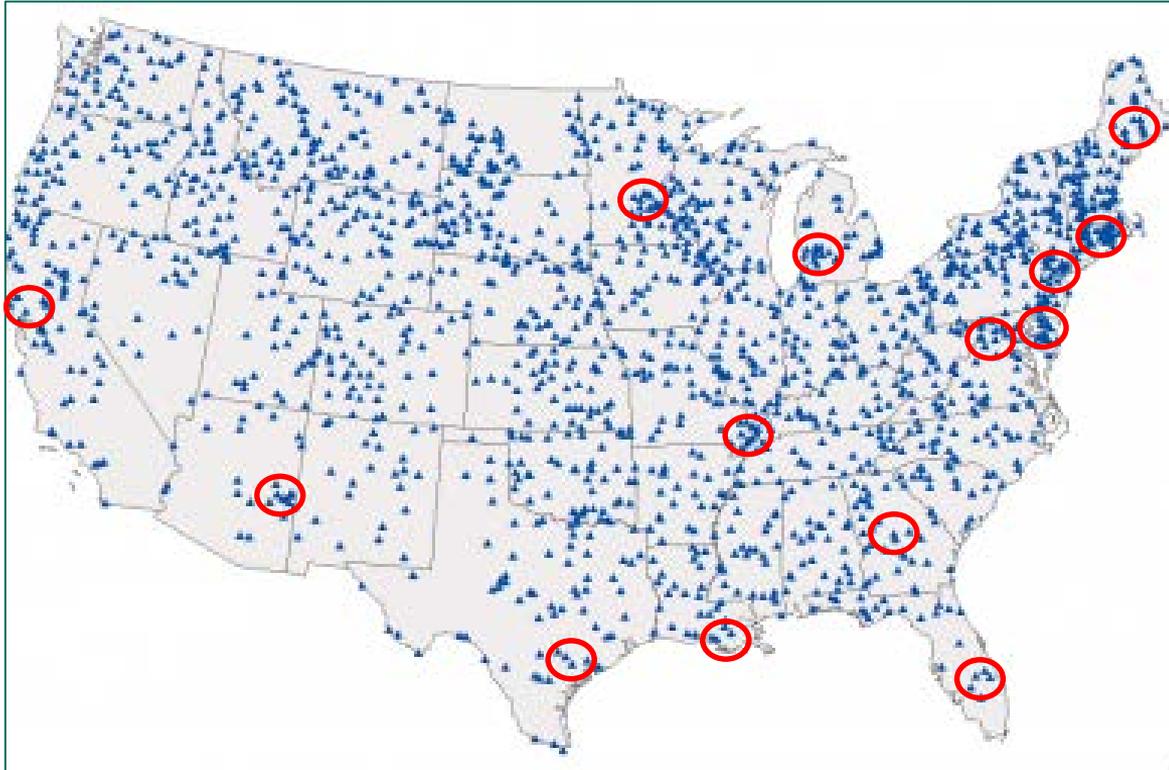

## 2b. NHIS – NHANES Integration

▲ NHIS PSUs  
(real locations  
not shown)

## 2b. NHIS – NHANES Integration

▲ NHIS PSUs  
(real locations  
not shown)

○ Cluster for  
MEC exam

## Work in progress

- Add questions to NHIS 2019 about willingness to have an exam
- Test new protocol for staged incentives in current NHANES survey
- Learn about home-based phlebotomy and blood processing
  - Plan a pilot test in NHANES 2019
- Write tasks orders (CDC's OPHSS Blanket Purchase Agreements)
  - Follow-up study of nonresponders
  - Evaluation of current protocol to obtain cooperation, make recommendations
  - Pilot test new procedures to obtain cooperation

# Core Content NHANES 2023+

# Work in progress

- Identify what statistics are needed in 2025 and beyond that only NHANES can deliver
  - Total burden of chronic disease – undiagnosed conditions
  - Dietary intakes and nutrition status
  - Environmental exposures
  - Population-based prevalence of infectious diseases
  - Reference values
  
- Identify statistics that are needed for trends

# NHANES Funding

← Internal funding →

← Collaborators →

# NHANES Funding

← Internal funding →

# NCHS funded CORE

- Overweight, obesity (anthropometry)
- Hypertension, prehypertension (blood pressure measurements)
- Dietary intakes (24-hour dietary recall)\*
- Dietary supplement use\*
- Prescription opiate use, antibiotic use (prescription drug component)
  
- Specimen collection and processing (blood and urine)
- Specimen banking

\* Partially funded

# Collaborator funded content to consider moving forward

## Exam

- Oral health
- Respiratory health
- Mental health
- Cognitive functioning
- Sensory impairments
  - Hearing, vision, balance
- Fitness
- Bone densitometry (DXA)

## Blood, urine, other

- Diabetes
- Dyslipidemias
- Cotinine
- Infectious diseases
- Nutritional biomarkers
- Environmental chemicals

**Avoid duplication**

We're [Beta testing.](#)

Before we open the program across the United States, we are enrolling a limited number of people as beta testers.

 [LEARN ABOUT BETA](#)

# NHANES and the NIH “All of Us” Research Program

## Study Sample

1. Probability sampling design – nationally representative
2. All ages
3. 5,000 per year

## Measurements

1. In-home interview (CAPI)
2. Physical measurements and biospecimen collections in MEC

## Limitation

1. Sample size
2. Response rates

## Study Sample

1. Non-probability sampling design used to recruit from health care provider organizations (HPOs) or direct volunteers (DV)
2. Adults 18+ years
3. 1 million over 10 years

## Measurements:

1. Online or at DV/HPO site.
2. Physical measurements and biospecimen collections at DV/HPO site or data collected from EHRs.

## Limitation

1. Standardization of all measurements
2. External validity (representativeness)

# Discussion

# Questions to the NCHS BSC

- Since the survey design is dependent on the statistics needed, how should we go about identifying the NHANES 2023 content?
- How much of a limitation is the current design (small number of PSUs, high oversampling?)
- Many moving parts, what should we work on first?
  - Content? Design? Oversampling?
