PART 2c
VITAL STATISTICS ICD-10 ACME DECISION TABLES
For
CLASSIFYING UNDERLYING CAUSES OF DEATH, 2014

SECTION I - INTRODUCTION

This manual contains the decision tables used by the ICD-10 ACME system to assign the underlying causes of death within the framework of the rules and instructions contained in the Vital Statistics Instructions For Classifying the Underlying Cause of Death, 2014 (Part 2a). Corrections and refinements in the Decision Tables and/or in the ACME computer programs are incorporated at the beginning of each data year prior to processing of that year's data. Updating only annually maintains comparability throughout each data year of NCHS and State mortality medical data. Refining the accuracy of the tables at more frequent intervals is desirable from a coder's viewpoint, but data analysis considerations must take priority.

Major Revisions from Previous Manuals:

1. In each edition, all new additions/corrections are identified with an asterisk.
2. In the Causal table, under address K768, Other Specified diseases of liver, added maybe reason "M" to all subaddresses in Causal table except the self-code, K768. The reason: Address must not be qualified as idiopathic.
3. In the Causal table, added I773 as a cause of I259.
4. In the Causal table, added Antibiotic therapy (Y400-Y409, Y560-Y569) as a cause of Clostridium Difficile Enterocolitis (A047).
5. Under Address codes, O000-O998, deleted all subaddresses of B200-B24, R75 and added/replaced with O987.
6. In the Causal table, under address Idiopathic infantile arterial calcification (Q288) added maybe reason "M" to all subaddresses except the self-code Q288. The reason: Address must not be qualified as idiopathic.
7. In the Modification table, added Clostridium Difficile Enterocolitis (A047) as a direct consequence of Antibiotic therapy (Y400-Y409, Y433, and Y560-Y569).
8. In the Modification table, added under address Diptheria (A369): SDC M792 for a combination code of A368 and SDC G810-G839 for a combination code of A368.
9. In the Modification table, added Parasite NOS (B89) as a SMP B650-B839, Specific parasites.
10. In the Modification table, deleted E849 SMP E841 and added E849 LMP E841.
11. In the Modification table, added Dementia (F03) as a direct consequence of Down's Syndrome (Q900-Q909).
12. In the Modification table, added addresses Mental retardation (F70-F78) as a direct consequence of certain Perinatal conditions classified to (P000-P073, P100-P112, P119, P159-P219, P350-P359, P370-P379, P520-P529, P570-P579, P90-P919).

13. In the Modification table, added Alzheimer's (G300-G309) as a direct consequence of Down's Syndrome (Q900-Q909).

14. In the Modification table, added Esophageal varices (I850) and (I859) as direct consequences of Liver diseases classified to B180-B189.

15. In the Modification table, added Cystic liver disease (Q446), as a LMP to Q611-Q613 (Polycystic kidney diseases).

17. In the Modification table, changed the linkage type from LMP to LDP: N000 LDP N030-N039.

18. In the Modification table, added under addresses N001-N008 LDP N030-N039.

19. In the Modification table, changed the linkage type from LMP to LDP: N009 LDP N030-N039.

21. In the Ambivalent Table (Table F) under address K719, added the term "non-viral" to the maybe "M" reason for LMC K720 for the combination code of K712.

Table A (Valid Codes for Multiple and Underlying Cause Coding) lists each ICD code that is valid for both multiple and underlying cause coding. Table B (Valid Codes for Multiple Cause Coding) lists each ICD code that is valid for multiple cause coding but invalid for underlying cause coding. Table C (Invalid Codes for Multiple and Underlying Cause Coding for US Registration Areas, Valid for International Users of ACME) lists each ICD code that is invalid for both multiple and underlying cause coding for US registration areas. Table D (Causal Relationship) shows which pairs of multiple cause codes constitute acceptable causal relationships (reported sequences). Table E (Modification) includes direct sequel, ill-defined conditions, senility, linkage, and specificity relationships. Table F (Reasons for Ambivalent Relationships in Modification Table) contains the reason for every ambivalent entry in Table E. Reasons are not included for some of the direct sequel relationships. This is further guidance to help in the selection of the most appropriate underlying cause of death. Table G (Code Conversions) cites each special code generated for multiple cause coding and the underlying cause code to which it converts. Table H (ICD-10 Trivial Conditions) lists the codes for conditions considered for coding purposes to be trivial (a condition unlikely itself to cause death).

These tables provide guidance on acceptable sequences, highly improbable sequences, and modifications in assigning underlying causes of death in compliance with the International Rules set forth in ICD-10. The tables are designed in accordance with the selection and modification rules contained in Part 2a and the rules for coding conditions contained in Part 2b of the Vital Statistics Instruction Manual series. When the decision tables are used in the process of assigning underlying causes of death, the applicable pair of conditions should be viewed within the framework of the basic coding principles in Part 2b. Otherwise, error in the underlying cause of death can result.

The decision tables have been tested and reviewed. Test results have established that the ACME system will
produce the same underlying cause of death as that assigned in the manual coding process in approximately 99 percent of the cases. Nonetheless, there are certain considerations that must be taken into account in their use.

First, an undertaking that attempts to deal with such a mass body of data with an objective of making firm conclusions on each code relationship with each other code for each decision table will, by its very nature, contain some inconsistent entries and oversight. As these are detected through use of the ACME system, corrections will be made in subsequent issues of this manual.

Secondly, the tables provide decisions used by NCHS in applying selection and modification rules in arriving at underlying causes of death. These decisions are intended to provide guidance to coders and to further standardize the mortality medical classification process. The tables are not intended to convey any conclusive medical judgment or knowledge. It is recognized that many of these relationships involve conditions about which medical opinion is divided.
SECTION II -GUIDANCE IN USE OF DECISION TABLES

Addresses and Subaddresses - Tables D, E, and F contain address and subaddress codes. The address always consists of a single 3 - 5 digit code enclosed in dashes e.g. "--- G08 ---." The subaddress is given under the address code and may consist of a single code or a span of codes. Interpretation is as follows for subaddresses:

G10    is a single 3 digit code
I800-I809   includes any valid 4th digit contained in category I80
K20-K219   includes all valid codes contained in categories K20 thru K219

Asterisk codes – ICD-10 provides for the classification of certain diagnostic statements according to two different axes -etiology or underlying disease process and manifestation or complication. Thus, there are two codes for those diagnostic statements subject to dual classification. The etiology or underlying disease process codes are marked with a dagger (†), and the manifestation or complication codes are marked with an asterisk (*) following the code in ICD-10. NCHS does not use the asterisk codes in multiple cause coding.

The asterisk codes have not been used for underlying cause coding; they are therefore, not in the decision tables. It is noted that certain codes in ICD-10 can be regarded as asterisk or dagger codes depending on the inclusion term being referenced. When such codes are contained in the decision tables, they are defined as dagger codes.

Created ICD-10 Categories -In ICD-10 a number of categories contain inclusion terms which are dissimilar in terms of how they causally relate to or combine with other categories. This dissimilarity in effect dictates that the causal relationship must be designated as having an ambivalent ("maybe") relationship in the ACME decision tables. As a result, the ACME underlying cause of death assignment for such cases is conditional in nature and must be reviewed by a nosologist. A number of the affected categories are relatively high in frequency and, therefore, reduce systems throughput capability of the automated assignment. NCHS has chosen to eliminate ambivalent systems rejects for 57 high frequency ICD categories by modifying the inclusion terms which are assigned to such categories. This has been accomplished by removing certain inclusion terms from an existing category and creating an artificial category not currently used by the ICD for those terms. This isolates the affected terms into separate categories so causal and modification relationships can be specifically stated as "yes" or "no." The resultant set of special codes thus includes existing ICD-10 codes, in which inclusion terms have been modified, and newly assigned defined artificial codes not currently in ICD-10.

Prior to using Decision Tables D and E, any term indexed to one of the ICD categories being modified must be recoded to its corresponding special category. All table entries (address, subaddress, and recodes) in both tables employ these special codes in lieu of the regular ICD codes. When the final underlying cause is one of the special artificial codes, that underlying cause must be converted back to its regular ICD category (see Table G).

The following list includes each original ICD category which has been modified, the corresponding special code which was used in the decision tables, and the definition of the special code. In general, for the special codes already in ICD-10, the definition merely cites the extent to which the category is being modified (usually with an "excludes" statement). For created codes, the definition cites the contents of the artificial category.

A169   Respiratory tuberculosis, unspecified
**ICD-10-Mortality Manual 2c - 2014**

**Excludes:** Any term indexed to A169 not qualified as respiratory or pulmonary (A1690)
*A1690*  
Tuberculosis NOS

**Includes:** Any term indexed to A169 not qualified as respiratory or pulmonary

**E039** Hypothyroidism, unspecified

**Excludes:** Any term indexed to E039 qualified as advanced, grave, severe, or with a similar qualifier (E0390)
*E0390*  
Advanced hypothyroidism
Grave hypothyroidism
Severe hypothyroidism

**Includes:** Any term indexed to E039 qualified as advanced, grave, severe, or with a similar qualifier

**G122** Motor neuron disease

**Excludes:** Any term indexed to G122 qualified as advanced, grave, severe, or with a similar qualifier (G1220)
*G1220*  
Advanced motor neuron disease
Grave motor neuron disease
Severe motor neuron disease

**Includes:** Any term indexed to G122 qualified as advanced, grave, severe, or with a similar qualifier

**G20** Parkinson’s disease

**Excludes:** Any term indexed to G20 qualified as advanced, grave, severe, or with a similar qualifier (G2000)
*G2000*  
Advanced Parkinson’s disease
Grave Parkinson’s disease
Severe Parkinson’s disease

**Includes:** Any term indexed to G20 qualified as advanced, grave, severe, or with a similar qualifier

**I219** Acute myocardial infarction, unspecified

**Excludes:** Embolism of any site classified to I219
*I2190*  
Embolism cardiac, heart, myocardium, or a synonymous site

**Includes:** Embolism of any site classified to I219

**I420** Dilated cardiomyopathy

**Excludes:** Any term indexed to I420 qualified as familial, idiopathic, or primary (I4200)
*I4200*  
Familial dilated cardiomyopathy
Idiopathic dilated cardiomyopathy
Primary dilated cardiomyopathy

**Includes:** Any term indexed to I420 qualified as familial, idiopathic, or primary

**I421** Obstructive hypertrophic cardiomyopathy

**Excludes:** Any term indexed to I421 qualified as familial, idiopathic, or primary (I4210)
*I4210*  
Familial obstructive hypertrophic cardiomyopathy
Idiopathic obstructive hypertrophic cardiomyopathy
Primary obstructive hypertrophic cardiomyopathy

**Includes:** Any term indexed to I421 qualified as familial, idiopathic, or primary

I422 Other hypertrophic cardiomyopathy

**Excludes:** Any term indexed to I422 qualified as familial, idiopathic, or primary (I4220)

*I4220* Familial other hypertrophic cardiomyopathy
Idiopathic other hypertrophic cardiomyopathy
Primary other hypertrophic cardiomyopathy

**Includes:** Any term indexed to I422 qualified as familial, idiopathic, or primary

I425 Other restrictive cardiomyopathy

**Excludes:** Any term indexed to I425 qualified as familial, idiopathic, or primary (I4250)

*I4250* Familial other restrictive cardiomyopathy
Idiopathic other restrictive cardiomyopathy
Primary other restrictive cardiomyopathy

**Includes:** Any term indexed to I425 qualified as familial, idiopathic, or primary

I428 Other cardiomyopathies

**Excludes:** Any term indexed to I428 qualified as familial, idiopathic, or primary (I4280)

*I4280* Familial other cardiomyopathies
Idiopathic other cardiomyopathies
Primary other cardiomyopathies

**Includes:** Any term indexed to I428 qualified as familial, idiopathic, or primary

I429 Cardiomyopathy, unspecified

**Excludes:** Any term indexed to I429 qualified as familial, idiopathic, or primary (I4290)

*I4290* Familial cardiomyopathy
Idiopathic cardiomyopathy
Primary cardiomyopathy

**Includes:** Any term indexed to I429 qualified as familial, idiopathic, or primary

I500 Congestive heart failure

**Excludes:** Any term indexed to I500 qualified as advanced, grave, severe, or with a similar qualifier (I5000)

*I5000* Advanced congestive heart failure
Grave congestive heart failure
Severe congestive heart failure

**Includes:** Any term indexed to I500 qualified as advanced, grave, severe, or with a similar qualifier

I514 Myocarditis, unspecified

**Excludes:** Any term indexed to I514 qualified as arteriosclerotic (I5140)

*I5140* Arteriosclerotic myocarditis

**Includes:** Any term indexed to I514 qualified as arteriosclerotic
ICD-10-Mortality Manual 2c - 2014

I515 Myocardial degeneration

**Excludes:** Any term indexed to I515 qualified as arteriosclerotic (I5150)

*I5150 Arteriosclerotic myocardial degeneration

**Includes:** Any term indexed to I515 qualified as arteriosclerotic

I600 Subarachnoid hemorrhage from carotid siphon and bifurcation

**Excludes:** Ruptured carotid aneurysm (into brain) (I6000)

*I6000 Ruptured carotid aneurysm (into brain)

I606 Subarachnoid hemorrhage from other intracranial arteries

**Excludes:** Ruptured aneurysm (congenital) circle of Willis (I6060)

*I6060 Ruptured aneurysm (congenital) circle of Willis

I607 Subarachnoid hemorrhage from intracranial artery, unspecified

**Excludes:** Ruptured berry aneurysm (congenital) brain (I6070)

Ruptured miliary aneurysm (I6070)

*I6070 Ruptured berry aneurysm (congenital) brain

Ruptured miliary aneurysm

I608 Other subarachnoid hemorrhage

**Excludes:** Ruptured aneurysm brain meninges (I6080)

Ruptured arteriovenous aneurysm (congenital) brain (I6080)

Ruptured (congenital) arteriovenous aneurysm cavernous sinus (I6080)

*I6080 Ruptured aneurysm brain meninges

Ruptured arteriovenous aneurysm (congenital) brain

Ruptured (congenital) arteriovenous aneurysm cavernous sinus

I609 Subarachnoid hemorrhage, unspecified

**Excludes:** Ruptured arteriosclerotic cerebral aneurysm (I6090)

Ruptured (congenital) cerebral aneurysm NOS (I6090)

Ruptured mycotic aneurysm brain (I6090)

*I6090 Ruptured arteriosclerotic cerebral aneurysm

Ruptured (congenital) cerebral aneurysm NOS

Ruptured mycotic aneurysm brain

I610 Intracerebral hemorrhage in hemisphere, subcortical

**Excludes:** Any term indexed to I610 qualified as bilateral, multiple, or similar term1(I6100)

*I6100 Bilateral, multiple [or similar term1] intracerebral hemorrhages in hemisphere, subcortical

**Includes:** Any term indexed to I610 qualified as bilateral, multiple, or similar term1

**Excludes:** Any term indexed to I611 qualified as bilateral, multiple, or similar term1 (I6110)

*I6110 Bilateral, multiple [or similar term1] intracerebral hemorrhages in hemisphere, cortical

**Includes:** Any term indexed to I611 qualified as bilateral, multiple, or similar term1

I612 Intracerebral hemorrhage in hemisphere, unspecified
Excludes: Any term indexed to I612 qualified as bilateral, multiple, or similar term1 (I6120)
*I6120  Bilateral, multiple [or similar term1] intracerebral hemorrhages, unspecified

Includes: Any term indexed to I612 qualified as bilateral, multiple, or similar term1

I613 Intracerebral hemorrhage in brain stem
Excludes: Any term indexed to I613 qualified as bilateral, multiple, or similar term1 (I6130)
*I6130  Bilateral, multiple [or similar term1] intracerebral hemorrhages in brain stem

Includes: Any term indexed to I613 qualified as bilateral, multiple, or similar term1

I614 Intracerebral hemorrhage in cerebellum
Excludes: Any term indexed to I614 qualified as bilateral, multiple, or similar term1 (I6140)
*I6140  Bilateral, multiple [or similar term1] intracerebral hemorrhages in cerebellum

Includes: Any term indexed to I614 qualified as bilateral, multiple, or similar term1

I615 Intracerebral hemorrhage, intraventricular
Excludes: Any term indexed to I615 qualified as bilateral, multiple, or similar term1 (I6150)
*I6150  Bilateral, multiple [or similar term1] intracerebral hemorrhages, intraventricular

Includes: Any term indexed to I615 qualified as bilateral, multiple, or similar term1

I618 Other intracerebral hemorrhage
Excludes: Any term indexed to I618 qualified as bilateral, multiple, or similar term1 (I6180)
*I6180  Bilateral, multiple [or similar term1] other intracerebral hemorrhages

Includes: Any term indexed to I618 qualified as bilateral, multiple, or similar term1

I619 Intracerebral hemorrhage, unspecified
Excludes: Any term indexed to I619 qualified as bilateral, multiple, or similar term1 (I6190)
*I6190  Bilateral, multiple [or similar term1] intracerebral hemorrhages, unspecified

Includes: Any term indexed to I619 qualified bilateral, multiple, or similar term1

I630 Cerebral infarction due to thrombosis of precerebral arteries
Excludes: Any term indexed to I630 qualified as bilateral, multiple, or similar term1 (I6300)
*I6300  Cerebral infarction due to bilateral or multiple [or similar term1] thrombi of precerebral arteries

Includes: Any term indexed to I630 qualified as bilateral, multiple, or similar term1

I631 Cerebral infarction due to embolism of precerebral arteries
Excludes: Any term indexed to I631 qualified as bilateral, multiple, or similar term1 (I6310)
*I6310  Cerebral infarction due to bilateral, multiple [or similar term1] emboli of precerebral arteries

Includes: Any term indexed to I631 qualified as bilateral, multiple, or similar term1

I632 Cerebral infarction due to unspecified occlusion or stenosis of precerebral arteries
Excludes: Any term indexed to I632 qualified as bilateral, multiple, or similar term1 (I6320)
*I6320  Cerebral infarction due to bilateral, multiple [or similar term1] unspecified occlusions or stenosis of precerebral arteries

Includes: Any term indexed to I632 qualified as bilateral, multiple, or similar term1
I633 Cerebral infarction due to thrombosis of cerebral arteries
   Excludes: Any term indexed to I633 qualified as bilateral, multiple, or similar term1 (I6330)
   *I633 Cerebral infarction due to bilateral, multiple [or similar term1] thrombi of cerebral arteries
   Includes: Any term indexed to I633 qualified as bilateral, multiple, or similar term1

I634 Cerebral infarction due to embolism of cerebral arteries
   Excludes: Any term indexed to I634 qualified as bilateral, multiple, or similar term1 (I6340)
   *I634 Cerebral infarction due to bilateral, multiple [or similar term1] emboli of cerebral arteries
   Includes: Any term indexed to I634 qualified as bilateral, multiple, or similar term1

I635 Cerebral infarction due to unspecified occlusion or stenosis of cerebral arteries
   Excludes: Any term indexed to I635 qualified as bilateral, multiple, or similar term1 (I6350)
   *I635 Cerebral infarction due to bilateral, multiple [or similar term1] unspecified occlusions or stenosis of cerebral arteries
   Includes: Any term indexed to I635 qualified as bilateral, multiple, or similar term1

I636 Cerebral infarction due to cerebral venous thrombosis, nonpyogenic
   Excludes: Any term indexed to I636 qualified as bilateral, multiple, or similar term1 (I6360)
   *I636 Cerebral infarction due to bilateral, multiple [or similar term1] cerebral venous thrombi, nonpyogenic
   Includes: Any term indexed to I636 qualified as bilateral, multiple, or similar term1

I638 Other cerebral infarction
   Excludes: Any term indexed to I638 qualified as bilateral, multiple, or similar term1 (I6380)
   *I638 Bilateral, multiple [or similar term1] other cerebral infarctions
   Includes: Any term indexed to I638 qualified bilateral, multiple, or similar term1

I639 Cerebral infarction, unspecified
   Excludes: Any term indexed to I639 qualified as bilateral, multiple, or similar term1 (I6390)
   *I639 Bilateral, multiple [or similar term1] cerebral infarctions, unspecified
   Includes: Any term indexed to I639 qualified as bilateral, multiple, or similar term1

I64 Stroke, not specified as hemorrhage or infarction
   Excludes: Any term indexed to I64 qualified as bilateral, multiple, or similar term1 (I6400)
   *I64 Bilateral, multiple [or similar term1] strokes, not specified as hemorrhage or infarction
   Includes: Any term indexed to I64 qualified as bilateral, multiple, or similar term1

I691 Sequelae of intracerebral hemorrhage
   Excludes: Any term indexed to I691 qualified as bilateral or multiple or similar term1 (I6910)
   *I691 Sequela of bilateral, multiple [or similar term1] intracerebral hemorrhages
   Includes: Any term indexed to I691 qualified as bilateral, multiple, or similar term1

I693 Sequelae of cerebral infarction
ICD-10-Mortality Manual 2c - 2014

**Excludes:** Any term indexed to I693 qualified as bilateral, multiple, or similar term1 (I6930)
* I6930  Sequela of bilateral, multiple [or similar term1] cerebral infarctions
**Includes:** Any term indexed to I693 qualified as bilateral, multiple, or similar term1

I694  Sequelae of stroke, not specified as hemorrhage or infarction
**Excludes:** Any term indexed to I694 qualified as bilateral, multiple, or similar term1 (I6940)
* I6940  Sequela of bilateral, multiple [or similar term1] strokes, not specified as hemorrhage or infarction
**Includes:** Any term indexed to I694 qualified as bilateral or multiple or similar term1

J101  Influenza with other respiratory manifestations, influenza virus identified
**Excludes:** Influenza, flu, grippe (viral), influenza virus identified (without specified manifestations) (J1010)
* J1010  Influenza, flu, grippe (viral), influenza virus identified (without specified manifestations)

J111  Influenza with other respiratory manifestations, virus not identified
**Excludes:** Influenza, flu, grippe (viral), influenza virus not identified (without specified manifestations) (J1110)
* J1110  Influenza, flu, grippe (viral), influenza virus not identified (without specified manifestations)

J841  Other interstitial pulmonary diseases with fibrosis
**Excludes:** Chronic pneumonia, not elsewhere classified (J8410)
* J8410  Chronic pneumonia, not elsewhere classified

J849  Interstitial pulmonary disease, unspecified
**Excludes:** Interstitial pneumonia, not elsewhere classified (J8490)  * J8490  Interstitial pneumonia, not elsewhere classified

J984  Other disorders of lung
**Excludes:** Lung disease (acute) (chronic) NOS (J9840)
* J9840  Lung disease (acute) (chronic) NOS

K319  Disease of stomach and duodenum, unspecified
**Excludes:** Disease, stomach NOS (K3190)  Lesion, stomach NOS (K3190)
* K3190  Disease, stomach NOS  Lesion, stomach NOS

K550  Acute vascular disorders of intestine
**Excludes:** Any term indexed to K550 qualified as emboli (K5500)
* K5500  Acute embolic vascular disorders of intestine
**Includes:** Any term indexed to K550 qualified embolic

K631  Perforation of intestine (nontraumatic)
**Excludes:** Intestinal penetration, unspecified part (K6310)
ICD-10-Mortality Manual 2c - 2014

Intestinal perforation, unspecified part (K6310)
Intestinal rupture, unspecified part (K6310)

*K6310 Intestinal penetration, unspecified part
Intestinal perforation, unspecified part
Intestinal rupture, unspecified part

K720 Acute and subacute hepatic failure
Excludes: Acute hepatic failure (K7200)
*K7200 Acute hepatic failure

K721 Chronic hepatic failure
Excludes: Chronic hepatic failure (K7210)
*K7210 Chronic hepatic failure

K729 Hepatic failure, unspecified
Excludes: Hepatic failure (K7290)
*K7290 Hepatic failure

M199 Arthritis, unspecified
Excludes: Any term indexed to M199 qualified as advanced, grave, severe, or with a similar qualifier (M1990)
*M1990 Advanced arthritis
Grave arthritis
Severe arthritis
Includes: Any term indexed to M199 qualified as advanced, grave, severe, or with a similar qualifier

Q278 Other specified congenital malformations of peripheral vascular system
Excludes: Congenital aneurysm (peripheral) (Q2780)
*Q2780 Congenital aneurysm (peripheral)

Q282 Arteriovenous malformation of cerebral vessels
Excludes: Congenital arteriovenous cerebral aneurysm (nonruptured) (Q2820)
*Q2820 Congenital arteriovenous cerebral aneurysm (nonruptured)

Q283 Other malformations of cerebral vessels
Excludes: Congenital cerebral aneurysm (nonruptured) (Q2830)
*Q2830 Congenital cerebral aneurysm (nonruptured)

R58 Hemorrhage, not elsewhere classified
Excludes: Hemorrhage of unspecified site (R5800)
*R5800 Hemorrhage of unspecified site

R99 Other ill-defined and unspecified causes of mortality
Excludes: Cause unknown (R97)
*R97 Cause unknown
SECTION III - DESCRIPTION AND USE OF TABLES A - C

Not all codes in ICD-10 are used for mortality medical coding. Table A lists in numerical order the ICD-10 codes which are valid for both underlying cause and multiple cause coding. Table B gives in numerical order the code numbers which are valid for multiple cause only. The two sets are different because (1) injury and poisoning codes are valid only for multiple cause coding, (2) special artificial codes are used only for multiple cause coding, and (3) certain other codes are defined for multiple cause coding use only (including postprocedural disorders). Created codes are discussed in Section II. More information on the valid code sets and their derivation can be found in Parts 2a, 2b, and 11 of this Vital Statistics Instruction Manual series. ACME uses Table A - C to assure that all multiple cause codes are valid prior to attempting assignment of an underlying cause of death. Table A validates the final underlying cause assignment.
SECTION IV - DESCRIPTION AND USE OF TABLE D

This table is referred to as the Causal Relationship Table. The codes in the table show when two conditions constitute an acceptable causal relationship (reported sequence). This table is used in the application of three of the selection rules: General Principle, Selection Rule 1 and Selection Rule 2.

The address code represents the condition on an upper line in Part I of each relationship of the two codes under question. Subaddress codes identify the conditions which can give rise to the condition classifiable to the address code. All subaddress codes (except an ambivalent relationship discussed below) recorded under an address code are in an acceptable causal relationship to the address code. All valid codes not recorded under the address code (i.e. either as an acceptable causal relationship or as an ambivalent relationship) are in an unacceptable causal relationship. In other words, the missing codes cannot cause the address code.

For some subaddresses, not all inclusion terms of the code (or code span) can cause the inclusions in the address code; and/or some but not all inclusions in the address can be due to the inclusions of the subaddress. Where such ambivalent causal relationships exist between the address and the subaddress, the subaddress code is flagged with an "M" (maybe).

If in processing a record the ACME system encounters a relationship(s) which is a "maybe" in the tables, the system assumes the relationship(s) to be acceptable and assigns an underlying cause on that basis. However, the record is listed for nosological review and correction in case the relationship is unacceptable.

In order to minimize the core storage requirement of the decision tables on the computer, those codes which are highly infrequent in mortality coding have not been "addressed" in Table D. Accordingly, the user will note that certain codes in Table A cannot be found as address codes in Table D. If, in processing a record, the ACME system encounters one of these codes as an address, the record is listed for manual underlying cause coding.
SECTION V - DESCRIPTION AND USE OF TABLE E

This table is referred to as the Modification Table. It includes direct sequel relationships (Selection Rule 3), senility and ill-defined conditions (Rule A), linkages (Rule C), and specificity (Rule D). For purposes of ACME selection, Rules E and F are integrated into the above decision tables and/or are handled at the multiple cause coding stage. Rule B (trivial conditions) is discussed in Section VIII.

The address code in Table E is the tentative underlying cause. In the process of classifying the conditions on a certificate, the first tentative underlying cause is the underlying cause selected through the use of General Principle, Rule 1, or Rule 2. This may be modified one or more times through use of Selection Rule 3 and the modification rules.

In the process of modification, the subaddress codes identify conditions which either combine with the tentative underlying cause to create a third code or are preferred over the tentative underlying cause. In both cases, the new code (preference or combination code) becomes the new address code. This process of modification (or modification and reselection) may be repeated several times before the final underlying cause is assigned.

The symbol "M" is also used in this table to denote ambivalent ("maybe") relationships. Ambivalents in this table are processed in the same manner as those in Table D.

The symbol "#" is used in this table to denote that special considerations are required in the application of Rule C (linkage).

1. In order to apply Rule C to categories C000-C969 (malignant neoplasms), the address and subaddress must be reported together in Part I or together in Part II. However, for certain categories, the address may be reported in Part I and the subaddress in Part II or vice versa. These exceptions are flagged with the "#" in Table E.

2. In applying Rule C to categories F09 and F29, certain subaddresses must be reported on the same line with the address in order to be selected by Rule C. The subaddresses are flagged with the "#" in Table E.

The following abbreviations precede each code relationship to designate the applicable table:

**DS:** When the tentative underlying cause is considered a direct sequel of another condition on the certificate in Part I (must be on same or lower line as tentative underlying cause) or Part II, and the code for the other condition is preferred over the code for the tentative underlying cause.

**DSC:** When the tentative underlying cause is considered a direct sequel of another condition on the certificate in Part I (must be on same or lower line as tentative underlying cause) or Part II, and the codes for the tentative underlying cause and the other condition combine into a third code.

**IDDC:** When the tentative underlying cause is an ill-defined condition in the due to position to another condition, and the codes for the tentative underlying cause and the other condition combine into a third code.

**SENMC:** When the tentative underlying cause is senility (R54), and is reported with mention of another condition on the certificate, and the codes for the tentative underlying cause and the other condition combine into a third code.

**SENDC:** When the tentative underlying cause is senility (R54) and is reported in a due to position to another condition and the codes for the tentative underlying cause and the other condition combine into a third
LMP: When the tentative underlying cause is reported with mention of another condition, in Part I or Part II of the certificate, and the code for the other condition is preferred over the code for the tentative underlying cause.

LMC: When the tentative underlying cause is reported with mention of another condition, in Part I or Part II of the certificate, and the codes for the tentative underlying cause and the other condition combine into a third code.

LDP: When the tentative underlying cause is reported in the due to position to another condition and the code for the other condition is preferred over the code for the tentative underlying cause.

LDC: When the tentative underlying cause is reported in the due to position to another condition and the codes for the tentative underlying cause and the other condition combine into a third code.

SMP: When the tentative underlying cause describes a condition in general terms, and a condition which provides more precise information about the site or nature of this condition is reported anywhere on the certificate, and the code for the more precise condition is preferred over the code for the tentative underlying cause.

SMC: When the tentative underlying cause describes a condition in general terms, and a condition which provides more precise information about the site or nature of this condition is reported anywhere on the certificate, and the codes for the tentative underlying cause and the other condition combine into a third code.

SDC: When the tentative underlying cause is reported in the due to position to another condition, and can be regarded as an adjective modifying this condition, and the codes for the tentative underlying cause and the other conditions combine into a third code.
SECTION VI - DESCRIPTION AND USE OF TABLE F

Table F contains an explanation for most ambivalent entries in Table E (modification rules). This provides further guidance in the selection of the most appropriate underlying cause of death. Ambivalent entries in Table E are identified with an "M." If the conditions given in Table F are met, the code or the combined code is then selected to be used as the underlying cause of death. This selected code or combination code can be further modified as well. Reasons are not included for some of the direct sequel relationships. To save space when printing the reasons, the following abbreviations are used:

Addr: refers to the address code
Suba: refers to the subaddress code

There is one reason that is extremely lengthy and repetitive. Whenever the following reason is reported:

Advanced, grave, severe:

The complete reason description is:

Suba must be described as severe, advanced, grave or with similar expression or it is evident patient's mobility was substantially impaired (mention of wheelchair, statement such as reduced mobility, bedridden or similar.
SECTION VII - DESCRIPTION AND USE OF TABLE G

Table G contains the list of created ICD-10 categories. If one of these codes is assigned as the underlying cause of death, ACME converts the special code back to its complementary ICD category for purposes of final underlying cause of death assignment. In each case, only the underlying cause of death is converted; the multiple cause codes are not modified by ACME. Table G lists these code conversions.
SECTION VIII - DESCRIPTION AND USE OF TABLE H

This table contains the list of codes representing conditions considered to be trivial in assigning the underlying cause of death. If a selected underlying cause is on this list, the ACME system applies Rule B to establish the appropriate course of action which may involve selecting a non-trivial condition as the underlying cause of death. See Part 2a for specific guidance on trivial conditions.
