A revised mortality data file for 2014 was released on April 3, 2017 to include corrections from Tennessee and Massachusetts affecting 125 records previously coded to Accidental discharge of firearms (W32-W34). After the revision, 50% of the changed records are now classified as Assault (homicide) by discharge of firearms (\*U01.4 and X93-X95); 42% as Intentional self-harm (suicide) by discharge of firearms (X72-X74); 4% as Discharge of firearms, undetermined intent (Y22-Y24); and the remaining 4% to various other causes. For more information, please see "Deaths: Final Data for 2014." This table was updated on May 3, 2017 to correct errors. The shaded areas in this table indicate the changes that were made.

[Rates are infant (under 1 year), neonatal (under 28 days), and postneonatal (28 days through 11 months) deaths per 100,000 live births in specified group. Race and Hispanic origin are reported separately on the death certificate. Persons of Hispanic origin may be of any race. Data for Hispanic persons are not tabulated separately by race; data for non-Hispanic persons are tabulated by race. Data for Hispanic origin should be interpreted with caution because of inconsistencies between reporting Hispanic origin on birth and death certificates]

<sup>1</sup> Rank based on number of deaths

[Rates are infant (under 1 year), neonatal (under 28 days), and postneonatal (28 days through 11 months) deaths per 100,000 live births in specified group. Race and Hispanic origin are reported separately on the death certificate. Persons of Hispanic origin may be of any race. Data for Hispanic persons are not tabulated separately by race; data for non-Hispanic persons are tabulated by race. Data for Hispanic origin should be interpreted with caution because of inconsistencies between reporting Hispanic origin on birth and death certificates]
