Progress Review Webinar: Access to Health Services and Oral Health

June 13, 2017
Maximizing Access: Connecting Health Care and Oral Health Care

Don Wright, MD, MPH
Acting Assistant Secretary for Health
U.S. Department of Health and Human Services
Chair
• Don Wright, MD, MPH, Acting Assistant Secretary for Health, HHS

Presentations
• Charles Rothwell, MBA, MS, Director, National Center for Health Statistics, CDC
• Arlene Bierman, MD, MS, Director, Center for Evidence and Practice Improvement, AHRQ
• Renée Joskow, DDS, MPH, Chief Dental Officer, HRSA
• Casey Hannan, MPH, Director (Acting), Division of Oral Health, CDC
• Martha Somerman, DDS, PhD, Director, National Institute of Dental and Craniofacial Research, NIH
• Christopher Halliday, DDS, MPH, Deputy Director, Division of Oral Health, IHS

Community Highlight
• Greg Nycz, Director, Family Health Center of Marshfield, Marshfield, Wisconsin

The National Academy of Medicine (formerly IOM) defines access to health services as the timely use of personal health services to achieve the best health outcomes.

Access to health care impacts overall physical, social, oral, and mental health status and quality of life.

Access to health services requires:
- Gaining entry into the health care system
- Accessing a health care location where needed services are provided
- Finding a trusted health care provider with whom the patient can communicate

SOURCE: https://www.healthypeople.gov/2020/topics-objectives/topic/Access-to-Health-Services
Access to Health Services in the United States

• Barriers to access to health services include:
  o High cost of care
  o Inadequate or no insurance coverage
  o Lack of availability of services
  o Lack of culturally competent care

• Barriers to accessing health services lead to:
  o Unmet health needs
  o Delays in receiving appropriate care
  o Inability to get preventive services
  o Preventable hospitalizations
  o Financial burdens
Having a usual primary care provider is associated with:

- Greater patient trust in the provider
- Good patient-provider communication
- Increased likelihood that patients will receive appropriate care

People with a usual source of care have:

- Better health outcomes
- Fewer disparities
- Lower total health care costs

For studies supporting the benefits of access to care, see:
https://www.healthypeople.gov/2020/topics-objectives/topic/Access-to-Health-Services
Medical Insurance Coverage, Persons <65 Years

NOTES: *2008 = HP2020 baseline. Data are for persons under age 65 years who report coverage by public and private health insurance. 2016 data are preliminary.

Increase desired
Oral health is essential to overall health.

Good oral health improves a person’s ability to:
- Speak
- Smile
- Smell
- Taste
- Touch
- Chew
- Swallow
- Make facial expressions

• Good oral health self-care practices:
  o brushing with fluoride toothpaste
  o daily flossing
  o professional treatment

• Health behaviors that can lead to poor oral health include:
  o Tobacco use
  o Excessive alcohol use
  o Poor diet

SOURCE: https://www.healthypeople.gov/2020/topics-objectives/topic/oral-health
• Oral diseases cause pain and disability for millions of Americans each year.

• Oral infections are associated with:
  • Diabetes
  • Heart disease
  • Stroke
  • Premature births
  • Low birth weights

• Dental caries (cavities) are preventable but are one of the most common chronic health problems of childhood in the United States.

• More than 90% of U.S. adults experienced dental caries, and 1 in 4 currently has untreated dental decay.

Untreated Dental Decay, by Age

Healthy People 2020 Progress Review
Maximizing Access: Connecting Primary Care and Oral Health

June 13, 2017
Presentation Overview

- Tracking the Nation’s Progress
- Access to Health Services
- Oral Health
17 Measurable HP2020 Access to Health Services Objectives:
- 4 Target met
- 5 Improving
- 7 Little or no detectable change
- 1 Getting worse

33 Measurable HP2020 Oral Health Objectives:
- 15 Target met
- 3 Improving
- 10 Little or no detectable change
- 5 Baseline data only

NOTES: Measurable objectives are defined as having at least one data point currently available, or a baseline, and anticipate additional data points throughout the decade to track progress. The Access to Health Services Topic Area contains 2 developmental objectives.
Presentation Overview

- Tracking the Nation’s Progress
- Access to Health Services
  - Medical Insurance
  - Usual Source of Medical Care
  - Delay in Obtaining or Inability to Obtain Needed Dental Care
- Oral Health
Medical Insurance Coverage, Persons <65 Years, 2015

HP2020 Target: 100%

NOTES: — = 95% confidence interval. *2008 Total = HP2020 baseline. Data are for persons under age 65 years who report coverage by public and private health insurance.

Obj. OH-10.1
Increase desired
So far in the decade, 9 out of 17 Healthy People 2020 Access to Health Services objectives have reached the targets or are improving.

The proportion of persons with medical insurance coverage is increasing, moving towards its HP2020 targets.

The proportion of persons with a usual source of medical care is also improving.

The proportion of persons who report delay in obtaining or inability to obtain needed dental care in the past 12 months demonstrated little or no detectable change.
Overall, 18 out of 33 Healthy People Oral Health objectives have met their targets or are improving.

A smaller proportion of children are suffering from untreated dental decay, however adolescents and adults are still not receiving the care they need.

In general, dental visits in the past year have not changed much for the total population but disparities persist.

Preventive dental services among low-income youth improved for much of the population with a few groups showing disparities.

Federally Qualified Health Centers with an oral health component are increasing and a growing number of Americans are now receiving care there.
Maximizing Access: Connecting Health Care and Oral Health Care

Arlene Bierman, MD, MS
Director, Center for Evidence and Practice Improvement
Agency for Healthcare Research and Quality
AHRQ’s Role in Addressing Access to Health Services Objectives
AHRQ’s Mission

The Agency for Healthcare Research and Quality's (AHRQ) mission is to produce evidence to make health care safer, higher quality, more accessible, equitable, and affordable;

And, to work within the U.S. Department of Health and Human Services and with other partners to make sure that the evidence is understood and used.

www.ahrq.gov
• AHRQ invests in **research and evidence** to make health care safer and improve quality.

• AHRQ creates materials to **teach and train** health care systems and professionals to help them improve care for their patients.

• AHRQ generates **measures and data** used to track and improve performance and evaluate progress of the U.S. Health system.
AHRQ provides a range of data resources on topics such as:
  - Use of health care
  - Costs of care

Medical Expenditure Panel Survey (MEPS)
  - National source for comprehensive annual data on how Americans use and pay for medical care
  - Provides annual estimates of health care utilization, expenditures, sources of payment and insurance coverage

AHS-1 Increase the proportion of persons with health insurance
• AHRQ has produced a number of statistical briefs on access to health services based on MEPS data
• Researchers can combine MEPS data with other data sources to increase impact

AHS-5 Increase the proportion of persons who have a specific source of ongoing care
AHRQ has developed tools and resources to improve the capacity of health care settings to expand access to services.

### TeamSTEPPS for Office-Based Care

### Academy for Integrating Behavioral Health and Primary Care

**AHS-6** Reduce the proportion of persons who are unable to obtain or delay in obtaining necessary medical care, dental care, or prescription medicines.
• AHRQ has developed tools and resources to increase the ability of health care professional to engage in patient-centered care and improved communication.
Identifying Health Disparities of Access

- AHRQ annually produces the *National Healthcare Quality and Disparities Report* (QDR)

- The most recent *National Healthcare Quality and Disparities Report and National Quality Strategy Update* is a joint effort addressing the progress made against the National Quality Strategy

- The *Chartbook on Access to Health Care* is one of a family of documents and tools that support the QDR

- It summarizes disparities across measures of access from the QDR
• Example of findings in the 2016 QDR:
• The percentage of Americans under age 65 who lack health insurance dropped from 18% in 2010 to 10% in 2015.
• Uninsurance rates declined among poor people, young adults and across all races.
• Data from National Health Interview Survey

**AHS-1.1 Increase the proportion of persons with medical insurance**
• AHRQ has a number of datasets that can be used to help identify what works, for whom, where and at what cost with regard to improving access to health services.
• AHRQ has created a wide variety of evidence-based toolkits, curricula and other resources to increase the capacity of primary care and other health care setting to deliver high quality, accessible care.
• Health care professionals can look to AHRQ to improve their ability to delivery patient- and family-centered care.
• While health disparities persist in accessing health services, AHRQ is committed to researching and implementing solutions.
Thank you!

Improving Access: the Role of the Health Resources and Services Administration in Primary Care and Oral Health

Renée W. Joskow, DDS, MPH
Chief Dental Officer
Health Resources and Services Administration
Supports more than 90 programs that provide health care to people who are geographically isolated, economically or medically vulnerable through grants and cooperative agreements to more than 3,000 awardees, including community and faith-based organizations, colleges and universities, hospitals, state, local, and tribal governments, and private entities.
Every year, HRSA programs serve tens of millions of people, including people living with HIV/AIDS, pregnant women, mothers and their families, and those otherwise unable to access quality health care.
HRSA’s Vision and Mission

Vision statement:
Healthy Communities, Healthy People

Mission statement:
Improve health and achieve health equity through access to quality services, a skilled health workforce and innovative programs
Agency Goals

- Improve Access to Quality Health Care and Services
- Strengthen the Health Workforce
- Build Healthy Communities
- Improve Health Equity
- Strengthen HRSA Program Management & Operations
Access and Oral Health Program Highlights

- HRSA Health Center Program
- Ryan White HIV/AIDS Program
- Maternal and Child Health
- Federal Office of Rural Health Policy
HRSA’s Health Center Program

- Increases access to quality primary health care services, including oral health, for medically underserved populations.

NEARLY 1,400 HRSA-supported health centers operate MORE THAN 10,400 service sites nationwide.
Access to High Quality, Primary Health Care

24,295,946

305,520
VETERANS

More than 13 million dental visits were provided in 2015, an increase of more than 1.2 million visits from the prior year.
Ryan White HIV/AIDS Program

- Provides care and services, including dental programs, to address the unique health issues faced by people living with HIV/AIDS (PLWH).

🎉 OVER HALF of people living with diagnosed HIV in the U.S.- MORE THAN 500,000 PEOPLE – receive care through the Ryan White HIV/AIDS Program
83% of Ryan White HIV/AIDS Program clients are virally suppressed, up from 70% in 2010, and exceeding the national average* of 55%.

*Viral suppression among people >=13 years old diagnosed with HIV in 34 states and DC
Oral health care is especially critical for PLWH, since dental professionals can play a role in early diagnosis of HIV infection.

In FY16, HRSA programs included

- $9 million for the Dental Reimbursement Program, which defrays costs for educational institutions that provide oral health care to PLWH
- $3.2 million for the Community-Based Dental Partnership Program that provides hands-on learning opportunities for future oral health professionals to learn about PLWH
HRSA’s Maternal and Child Health (MCH) Bureau programs serve more than 50 million women, children and families each year, including half of all pregnant women and one-third of all infants and children in the United States.

- **Block Grants to States** - Title V Maternal and Child Health Block Grant Program is the nation’s oldest federal-state partnership. It aims to improve the health and well-being of women (particularly mothers) and children.

- **Maternal, Infant, and Early Childhood Home Visiting Program** - Supports at-risk parents and families in all 50 States, DC, and 5 territories
Builds and strengthens the capacity of state and community health care programs to implement systems of care that increase access and utilization of quality preventive oral health care and restorative services to MCH populations most at risk for oral disease.

- **MCH National Performance Measures**
- **Bright Futures**
- **Perinatal and Infant Oral Health Quality Improvement**
Federal Office of Rural Health Policy

Provides policy support to the Office of Secretary and supports a number of rural health programs, including rural health networks, black lung clinics, telehealth, and veterans rural health access programs

- **Telehealth Network Grant Program**- Since 2005, supported 3,100 new or expanded telehealth sites; nearly a 10% increase from 2015 to 2016.

- **Rural Community Health Gateway**- The home for information about evidence-based models of rural health interventions, as well as innovative approaches- [https://www.ruralhealthinfo.org/](https://www.ruralhealthinfo.org/)
联邦农村卫生办公室

- **农村健康护理服务外展计划**投资于农村社区，专注于外展和教育。

- **农村健康网络发展计划**资助利用网络方法的计划，以提供针对健康需求的创新解决方案。

- **农村健康信息中心口腔健康工具包**

  网址：https://www.ruralhealthinfo.org/community-health/oral-health
Disparities in access to primary medical care and oral health care persist.

**HRSA continues to:**

- Support an increase in health care access points to expand the availability of services to underserved, disadvantaged, geographically isolated, and medically vulnerable populations.
- Support the integration and coordination of public health with primary care, including behavioral and oral health services, to improve individual outcomes and overall population health.

HRSA Oral Health & Fact Sheet

Across the Agency

Every year, Health Resources and Services Administration (HRSA) programs serve tens of millions of people, providing health care to people who are geographically isolated, and economically or medically vulnerable. HRSA programs are also ensuring that quality dental care is available for those who need it most. This is especially true for people living with HIV/AIDS (PLWH); mothers, children and youth, those with special health care needs; and those who receive care through the Health Center Program. Examples include:

- The Ryan White HIV/AIDS Program which provides related care and services to more than 500,000 people every year, including dental programs to address the unique health issues faced by PLWH. Oral health care is especially critical for HIV patients, since dental professionals can play a role in early diagnosis of HIV infection. In FY16, HRSA programs included around $9 million for the Dental Reimbursement Program that defrays costs for educational institutions that provide oral health care to PLWH, and $3.2 million for the Community-Based Dental Partnership Program that provides hands-on learning opportunities for future oral health professionals to learn about PLWH.1-4

- The Title V Maternal and Child Health Services Block Grant to States improves the health and well-being of the nation’s mothers, infants, children and youth, including children and youth with special health care needs, and their families. Oral health is one of 15 Title V national performance priority areas that states can track to demonstrate improvement in the percent of women who had a dental visit during pregnancy and the percent of children who had a preventive dental visit in the last year.5

- HRSA’s National Health Service Corps (NHSC) program offers loan repayments and scholarships for health care professionals, including dentists and dental hygienists that practice in Health Professional Shortage Areas. In FY10, 52 dental student scholarships were awarded and 146 dentists and registered dental hygienists received loan repayments.6

- HRSA’s Oral Health Workforce Improvement Program provides grants to states to help develop and implement innovative programs to address the dental workforce needs of designated Dental Health Professional Shortage Areas. In academic year 2015-2016, 10 State grantees hired two new dental officers, 3 new dentists or hygienists, one epidemiologist and 2 administrative staff members in state dental offices.7

- HRSA provides scholarships and loans for disadvantaged students to promote diversity among health professions students and practitioners to assure that qualified students are not denied a health profession career due to lack of financial resources. More than $2 million in scholarships for disadvantaged students was dispersed to dental and dental hygiene students in FY13,8

- Working across the agency, HRSA developed an essential set of oral health core competencies for non-dentists in efforts to improve access for early detection and preventive interventions leading to improved health.9

- HRSA created the Perinatal and Infant Oral Health Quality Improvement Initiative to target pregnant women and infants at high risk for dental diseases through community-based approaches for integrating oral health care into statewide health care systems.

Key Facts

- Around 1 million people live in designated dental health professional shortage areas.10

- $291.5 million to NHSC health center grantees provided oral health services in FY16.11

- HRSA’s Community-Based Dental Partnership Program provided direct dental services to more than 1,000 people living with HIV/AIDS in FY15.12

- More than 3,000 National Health Service Corps dentists and registered dental hygienists work in health professional shortage areas.13

- HRSA’s Oral Health Training (OHT) programs trained more than 3,800 oral health students and nearly 400 primary care dental residents in academic year 2015-2016.14

- Sixty percent of OHT program-supported students, residents, and fellows received clinical training in medically underserved communities in academic year 2015-2016.15

- HRSA has supported the Students to Service Loan Repayment Program to dental students pursuing a DDS or DMD degree.16

</table>

**Funder**

- Fund state implementation of evidence-based interventions to address disparities in dental caries.
- Fund state infrastructure and state surveillance systems, which support evidence-based interventions that address disparities in dental caries.

**Translator, Disseminator**

- Develop model of dental public health’s role in health system transformation to guide dental health and general health communities.
- Communicate the value of dental and medical integration to partners and decision makers.

**Surveillance, Evaluation and Research Leader**

- Monitor dental caries disparities and their key drivers.
- Research health outcomes and/or cost-effectiveness of interventions that address disparities in dental caries.

**Funder**

- Fund states to integrate dental health with general health in the state-level public health and policy systems.
- Co-fund and collaborate on integration efforts with others in CDC and with federal partners.

**Accountability**

**Respect**

**Integrity**

[For more information, visit the Division of Oral Health website at: http://www.cdc.gov/oralhealth/](http://www.cdc.gov/oralhealth/)
Division of Oral Health
Strategic Objective 1

Promote Evidence-Based Interventions to Address Disparities in Dental Caries
School-based Dental Sealant Programs

- **State Activities:** Provide sealants by dental professionals in schools with mobile equipment
  - Target schools where >50% of children are eligible for free or reduced lunch programs
  - Provide access to care for children without access to traditional dental offices
School-based Dental Sealant Programs

- Sealants are under-utilized
- Placing sealants in schools target children who may not be accessing dental services
- School-based sealant programs are cost-saving to states when located in schools that serve a high percentage of low-income families

State Activities:

- Measure progress toward Healthy People objective (HP 2020 target-79.6%)
- Establish a CWF quality control program
  - Daily testing
  - Training of operators
  - Inspection
- Participate in a proficiency testing program
- Education and promotion of CWF
Fluoridation Status, 2014

Percent of people on community water systems receiving optimally fluoridated water (OH-13)

Healthy People 2020 Objective OH-13 Target = 79.6%
DOH led the process to implement revised recommendations for community water systems that add fluoride to their water.

PHS recommends a fluoride concentration of 0.7 milligrams/Liter (mg/L) to maintain caries prevention benefits and reduce the risk of dental fluorosis.

Released April 27, 2015
Monitor Dental Caries and their Key Drivers

Oral health data systems monitor the prevalence of oral diseases and the factors influencing oral health.
Guide Dental Public Health to be Part of the Health System Transformation
DOH works to integrate dental public health into a national dialogue focused on broad health system transformation.

- Models of Collaboration for State Chronic Disease and Oral Health Programs, 2016–2017
  - Funding supports state health departments to develop chronic disease prevention projects integrating activities from chronic disease and oral health programs
    - Awarded to Alaska, Colorado, Georgia, Maryland, Minnesota, and New York

Objective 2: Guide dental public health to be part of the health system transformation
Partnerships

Key Federal Partners
- Centers for Medicare and Medicaid Services
- Environmental Protection Agency
- Health Resources and Services Administration
- National Institutes of Health
- Indian Health Service

Key Nonfederal Partners
- American Association of Public Health Dentistry
- American Dental Association
- Association of State and Territorial Dental Directors
- Children’s Dental Health Project
- Organization for Safety, Asepsis and Prevention
CDC Division of Oral Health

NIDCR: Guiding Advances in Oral Health Research and Innovation

Martha Somerman, DDS, PhD
Director, National Institute of Dental and Craniofacial Research, NIH
U.S. Department of Health and Human Services
Alignment of NIDCR Priorities with HP 2020 Objectives

- Research to reduce caries (OH-1, OH-2, OH-3, OH-4)
- Research to treat periodontal disease and inflammation (OH-4, OH-5)
- Research on early detection and treatment of oral and pharyngeal cancers (OH-6)
- Research on disease prevention strategies (OH-7, OH-8, OH-14)
- Research to reduce health disparities and to test social and behavioral interventions (OH-8, OH-12)
- Research on best methods for dissemination and implementation of evidence-based practices (all objectives)
- Research on genetic and environmental causes of craniofacial anomalies (OH-15, OH-16)
- Training in dental public health (OH-17)
NIDCR Portfolio

>350 training and career development
~6500 oral health researchers, 190,000 dentists
Engaging the Community, Envisioning the Future

NIDCR 2030: Envisioning the Future, Together

- Oral Health + Overall Health
- Precision Health
- Autotherapies
- Oral Biodevices
- Workforce Diversity

Share your ideas nidcr2030.ideascale.com
Oral health will be fully integrated into the study of overall health through a deeper understanding of the mechanisms that cause disease or support health.

Integration will:

- Enhance interactions and communications among practitioners, researchers, and patients.
- Advance our understanding of factors that cause disease or support health.
Periodontal Disease Bacteria Linked to Rheumatoid Arthritis

To Prevent Rheumatoid Arthritis, Look Past the Joints to the Gums

Jennifer Abbasi

• Researchers identified a bacteria typically associated with periodontal disease in >50% of individuals with RA

Konig et al. Sci Transl Med. 8, 2016

JAMA, March 2017
Precision prevention, treatment and public health interventions will be available to all people

Including strategies to:

- Promote health and **prevent** and treat disease based on individual’s genetics, environment, behavior, etc.
- **Overcome** health disparities
- Develop **public health interventions**
Developing Probiotics for Caries Prevention

- A newly identified strain of Streptococcus, A12, can help counteract the effects of caries-causing *S. mutans*
  - A12 neutralizes acidic conditions and hinders *S. mutans* survival
  - Opportunity for probiotic development - prevention
  - Opportunity for precision health - caries risk assessment and identify people who could most benefit from A12
Test health promotion and disease prevention strategies

Community-based investigation and participation

Multidisciplinary team approach

Examples of Health Disparities research efforts:

- Storytelling techniques in American Indian/Alaska Native communities to improve oral health knowledge and behaviors in women and their infants
- Leveraging text messaging and social networks to promote oral health behaviors in underserved populations
- Understanding the effects of aging on health (trans-NIH)
Adapting the dental environment to improve experience for children with ASD

- Autism Spectrum Disorders (ASD) cause sensory processing difficulties
- ASD children are at higher risk of oral diseases, including caries
- Sensory Adapted Dental Environment (SADE) to improve dental office visits
- Lower anxiety and sensory discomfort reported with SADE
National Dental Practice-Based Research Network

Engaging practitioners to generate the evidence base to improve precision health care

- **52,500** participants enrolled and over **55** studies in National coordinating center & **6 regional centers**
- Over **6,800** practitioner members, all 50 states
- Over progress or completed: [https://www.nationaldentalpbrn.org/](https://www.nationaldentalpbrn.org/)

- Studies include: Management of painful temporomandibular disorders, HPV screening for oral cancer risk, and opioid prescribing practices of dentists

---

**Practice-Based Research**

**Healthy People 2020**
Recent Research Initiatives & On the Horizon

- Research to better understand gene-environment interactions in orofacial clefting
- Clinical studies on craniofacial anomaly and scar repair strategies (fibromodulin)
- Initiative on dissemination and implementation research
- Initiative to identify novel tumor antigens for oral cancer treatment
- Research on tailoring dental treatment for individuals with systemic diseases that compromise oral health
- Research to address emerging public health concerns (zika virus, opioids, HPV oral cancer, e-cigarettes, etc.)
- Collaborations on effects of aging on health and disease
- Development of tools & technologies to monitor health and detect and treat dental, oral and craniofacial diseases and disorders
- Training program at NIDCR in Dental Public Health and Bioinformatics (with NLM)

Mission

To raise the physical, mental, social and spiritual Health of American Indians and Alaska Natives to the highest level

Agency Priorities

• People
• Resources
• Partnerships
• Quality
Population Served

- Members of 567 Federally recognized Tribes
- More than 2.2 million American Indians and Alaska Natives

IHS Services are administered through a system of 12 Area Offices and 170 IHS and tribally managed service units

- 404 total dental clinics
- 76 IHS Direct
- 319 Tribal
- 9 Urban
Service Population By Area

TOTAL IHS SERVICE POPULATION FOR CY 2017: 2,239,089

IHS Service Population Map
Oral Health Initiatives and Programs

- Oral Health Surveillance
- Early Childhood Caries Collaborative
- Periodontal Treatment Initiative
- Oral Health Promotion/Disease Prevention Funding Initiative
- Dental Clinical and Preventive Support Centers
- Alternative Dental Workforce Models
- Dental Workforce Efficiency Initiative
### Oral Health Surveillance

• Results:
  • 0-5 year old Access to Care                        7.9% increase
  • 0-5 year old Sealants                             65.0% increase
  • 0-5 year old Topical Fluoride                    68.2% increase
  • 0-5 year old ITR                                   161.0% increase
Results:

- 1-2 year old caries experience: 6.3% decrease
- 1-2 year old untreated decay: 4.3% decrease
- 1-5 year old caries experience in “fully implemented sites”: 16.8% decrease
- 1-5 year old untreated decay in “fully implemented sites”: 26.8% decrease
Periodontal Treatment Initiative

• Resulted in the development and release of new National standards for screening and treatment of periodontal (gum) disease

• Expanded Functions Dental Assistants (EFDAs): 22 courses in the last two years, 153 dental assistants trained

• Have developed a new treatment protocol for non-diabetic patients

• Have developed a new Community Periodontal Index screening guide

• Have evaluated the effectiveness of periodontal EFDAs
• The Division of Oral Health has funded prevention projects in the Indian Health Service since the year 2000

• Annual Awards, averaging 15 from 2010 to 2017

• 16 projects funded in fiscal year 2017

• Each funded program from 2014 to 2017 provided evaluation reports that were disseminated to national audience

• Each of the funded initiatives demonstrated “out of the box” innovative thought that has led to national replication of their best practices
• Purpose: To bolster infrastructure
• Have been funded since 2004
• Five year program awards and grants
• 8 Dental Clinical and Preventive Support Centers serving ten of twelve IHS Areas
• Alaska, Albuquerque, Billings, California, Nashville, Oklahoma City, Navajo, Phoenix, Tucson and Portland areas are currently served by a Dental Clinical and Preventive Support Center
• Collaboration with Johns Hopkins University School of Public Health

• Purpose: to evaluate impact of different alternative dental workforce models on productivity (visits, RVUs), efficiency (services per patient, etc.) and GPRA (access, fluoride and sealants)

• The alternative dental providers include expanded functions dental assistants, independent registered dental hygienists, primary dental health aides and dental health aide therapists

• Project is ongoing
• Have developed new clinical efficiency and effectiveness indicators

Map prepared May 2017
by Family Health Center of Marshfield, Inc.
Oral Health in America: A Report of the Surgeon General

Department of Health and Human Services
U.S. PUBLIC HEALTH SERVICE
The Dental Access Problem

A Wisconsin Problem

• 30.8% of our 3rd graders have untreated decay. Four percent (8.4% in lower income schools) had urgent care needs (pain, infection, swelling, or soft tissue ulceration of more than two weeks duration) (Make Your Smile Count Survey, Wisconsin DHFS, 2001-2002)

• Only 23.4% of State Medicaid recipients received a dental service in 2008. (data from Wisconsin Department of Health Services)
Our Plan

Our destination: 100% access to high quality services
0 health disparities

Our strategy: Develop a plan capable of delivering us to our final destination

Planning horizon: 10 to 20 years
The Need for a Comprehensive Strategy

To be successful, we must recognize the importance of dual accountabilities:

1. To those in need
2. To those who pay (the State of Wisconsin, HRSA, Medicaid) as well as those who ultimately foot the bill (taxpayer).
Major Components of the Plan

1. Rapidly expand dental capacity. If you build it they will come, but they will come when they are in pain
2. Foster collaboration across medicine, public health, and dentistry
3. Develop an integrated oral/medical electronic health record with decision support tools
Elements of Our Oral Health Initiative

• Access to needed services leaving no one behind
• Integration across public health/medical and dental domains
• Workforce solutions
  o Not enough dentists
  o Maldistribution of dentists
  o Training deficits
• Quality assurance and improvement
• Expanding our knowledge base
Access

Leaving No One Behind

• The elderly
• Veterans*
• Medicaid
• Those with dental emergencies*
• Uninsured
• Disabled*
• Our youngest children
• Medically complex patients
• Individuals whose oral condition presents a barrier to work*

*Statewide priority
Community Collaborations And Outreach

- Tele-dental and Head Start
- Nursing Homes/Assisted Living Facilities
- Community Hospitals
- Social Service Agencies
- Job Service Agencies
- Disability Groups
- Veteran Affairs Offices
- Local Public Health Directors and Oral Health Staff
- Schools
- Day Care Centers
- WIC Offices
- Food Pantries
- Free Clinics
The Dental Workforce and Rural Wisconsin

Facing a triple threat:

• Aging and retirement

• Dentist preferences for practice locations

• Gender equality and preferences
OUR FIRST REGIONAL DENTAL FACILITY
THE LADYSMITH DENTAL CENTER  ❖ OPENED JULY 2003

8,840 square feet
17 operatories
5 dentists/5 hygienists
Building funded with State Rural Health Dental Clinic funds and FHC reserves

OUR TENTH REGIONAL DENTAL FACILITY
THE MENOMONIE DENTAL CENTER  ❖ OPENED DECEMBER 1, 2016

13,200 square feet
20 operatories (includes 4 training operatories)
5 dentists/4 hygienists

Special space and equipment to serve the developmentally disabled
### 2017 Current Oral Health Infrastructure

</tbody>
</table>
Why Medicine?

• There are many health literacy issues that need to be addressed.
• There are barriers other than financial that keep people from going to the dentist.
• Opportunity (a high proportion of the population sees a physician each year).
• Obligation (to care for the patient) and increasing awareness of oral-systemic relationships.
How Can Medicine Help?

1. Combined medical/dental electronic record with decision support to maximize compliance with evidence based preventive health services

2. Dentists and hygienists virtually teaming with primary care providers - more well-child checks, less extractions – more immunizations, less illness
Medical Dental Integration
Better Care?

Case example: A diabetic patient presented at our Ladysmith Dental Center. The patient was jaundiced and very ill and had a large lesion on his leg for the past four years that would not heal. He also had severe oral health disease. Following a full mouth extraction and dentures, this patient has been back for routine care. He reports his blood glucoses are under control, he has good skin color, his skin lesion is healed and he is very happy.
Medical Dental Integration
Better Care?

• **Case example:** A 20-year-old female with no income presented as unemployed and depressed with very poor oral health. We provided extractions and dentures. She now has an improved self image and a job.
Health center patients receiving dental care

HP2020 goal:
Health centers with oral health programs: 69%
Wisconsin: 83%

Wisconsin:
50.5%
63.0%
50.5%

HP2020 (OH-11*) Target: 33.3%

FQHC Dental Centers
Excerpt from letter of support from Jackson County Department of Health & Human Services, Jackson County Public Health Nurse

• “I recently took a call from a concerned sister who had a very ill 28 year old brother with a full-time job, however, no medical or dental insurance. He was experiencing high fevers, severe malaise, and significant body pain. I advised family to take him to local urgent care. Upon examination it was found that he had not had proper dental care for several years. He not only had abscessed teeth that caused him to be septic, but also had an advanced stage of jaw cancer. Hospital staff expressed concerns with him not living another 12 hours if he hadn’t come into urgent care when he did. The family and I feel strongly if he would have had access to a dental center he would have had prevention and/or earlier diagnosis of the abscessed teeth and jaw cancer.”
