\*Estimates are considered unreliable. Data preceded by an asterisk have a relative standard error (RSE) of 20%-30%.

Data not shown have an RSE of greater than 30%.

...Category not applicable.

<sup>1</sup>Average length of stay is calculated by dividing days of care by number of discharges.

See Appendix II, Average length of stay; Days of care.

<sup>2</sup>Starting with 2008 data, the sample of nonfederal short-stay hospitals was cut in half.

This smaller sample size has increased standard errors. Therefore, caution should be exercised in interpreting trends in these data. See Appendix I, National Hospital Discharge Survey (NHDS).

<sup>3</sup>Includes discharges with first-listed diagnoses not shown in table.

<sup>4</sup>Shown for women only.

NOTES: Excludes newborn infants.

Diagnostic categories are based on the International Classification of Diseases, 9th Revision, Clinical Modification (ICD-9-CM).

See Appendix II, Diagnosis; Human immunodeficiency virus (HIV) disease; International Classification of Diseases, 9th Revision, Clinical Modification (ICD-9-CM);

Table X for ICD-9-CM codes.

Rates are based on the civilian population as of July 1.

Starting with *Health, United States, 2003*, rates for 2000 and beyond are based on the 2000 census.

Rates for 1990-1999 use population estimates based on the 1990 census adjusted for net underenumeration using the 1990

National Population Adjustment Matrix from the U.S. Census Bureau.

Rates for 1990-1999 are not strictly comparable with rates for 2000 and beyond

because population estimates for 1990-1999 have not been revised to reflect the 2000 census.

See Appendix I, National Hospital Discharge Survey (NHDS); Population Census and Population Estimates.

Additional data and diagnosis categories are available from: <http://www.cdc.gov/nchs/hdi.htm>.

Data for additional years are available. See Appendix III.
