* Estimates are considered unreliable. Data preceded by an asterisk have a relative standard error (RSE) of 20%–30%. Data not shown have an RSE of greater than 30%.

NOTES: SE is standard error. Data are for the civilian noninstitutionalized population. Current asthma is based on a parent or knowledgeable adult responding to both questions: “Has a doctor or other health professional ever told you that your child had asthma?” and “Does your child still have asthma?” Persons of Hispanic origin may be of any race. Asian race includes persons of both Hispanic and non-Hispanic origin. Percent of poverty level is based on family income and family size and composition using U.S. Census Bureau poverty thresholds. Missing family income data were imputed for 2009–2010. See Appendix II, Family income; Hispanic origin; Poverty; Race; Table VI. Also see Table 46.
