NOTES: This table disaggregates health expenditures according to five classes of sponsors: businesses, households (individuals), federal government, state and local governments, and nonpatient revenue sources such as philanthropy. Where businesses or households pay dedicated funds into government health programs (for example, Medicare) or employers and employees share in the cost of health premiums, these costs are assigned to businesses or households accordingly. This results in a lower share of expenditures being assigned to the federal government than for tabulations of expenditures by source of funds. Estimates of national health expenditure by source of funds aim to track government-sponsored health programs over time and do not delineate the role of business employers in paying for health care. Some of the sponsor categories were revised or added in 2014 to account for changes in the health care system. See Appendix I, National Health Expenditure Accounts (NHEA). Estimates may not sum to totals because of rounding. For more information on NHE categories, sources, and methods, see the National Health Expenditure Accounts Methodology Paper, 2014.
