2014 ⁴	0.11	0.30	0.55	0.22	0.21

¹Persons of Hispanic origin may be of any race. Starting with 2003 data, some states reported multiple-race data. The multiple-race data for these states were bridged to the single-race categories of the 1977 Office of Management and Budget standards, for comparability with other states. See Appendix II, Hispanic origin; Race.

²Includes all low-risk cesarean section births not shown separately.

³Low-risk cesarean delivery is defined as singleton, term (37 or more weeks of gestation by last menstrual period estimate for data years 1999–2013 and the obstetric estimate for 2014), vertex (not breech) cesarean delivery to women having a first birth per 100 women delivering singleton, term, vertex, first births.

⁴For 2014, the definition of term birth was based on the obstetric estimate of gestational age. For more information on the obstetric estimate, see: Martin JA, Osterman MJK, Kirmeyer SE, Gregory ECW. Measuring gestational age in vital statistics data: Transitioning to the obstetric estimate. National vital statistics reports; vol 64 no 5. Hyattsville, MD: NCHS. 2015. Available from: http://www.cdc.gov/nchs/data/nvsr/nvsr64/nvsr64_05.pdf. Use of the obstetric estimate instead of the last menstrual period had a statistically significant but small impact on the percentage of women with low-risk cesarean section births.

NOTES: Ties in highest and lowest rates were resolved by looking at additional decimal places. See Technical Notes.
