* Estimates are considered unreliable. Data preceded by an asterisk have a relative standard error of 20%–30%.

¹Persons of Hispanic origin may be of any race. Race-specific estimates are tabulated according to the 1997 *Revisions to the Standards for the Classification of Federal Data on Race and Ethnicity*. The single-race categories plus multiple-race category shown in the table conform to the 1997 Standards. Starting with 2003 data, race responses of other race and unspecified multiple race were treated as missing, and then race was imputed if these were the only race responses. Almost all persons with a race response of other race were of Hispanic origin. See Appendix II, Hispanic origin; Race.

²Includes all persons not shown separately.

³Estimates are age-adjusted to the year 2000 standard population using five age groups: 18–24 years, 25–34 years, 35–44 years, 45–64 years, and 65 years and over. Age-adjusted estimates in this table may differ from other age-adjusted estimates based on the same data and presented elsewhere if different age groups are used in the adjustment procedure. See Appendix II, Age adjustment.

⁴Current cigarette smokers are defined as ever smoking 100 cigarettes in their lifetime and now smoke every day or some days. See Appendix II, Cigarette smoking.

⁵Three-year average annual estimates are shown in order to present estimates for the American Indian or Alaska Native and the multiple-race populations. Annual estimates are not stable for smaller population groups.

NOTES: Ties in highest and lowest rates were resolved by looking at additional decimal places. See Technical Notes. Also see Figure 7.
