* Estimates are considered unreliable. Data preceded by an asterisk have a relative standard error (RSE) of 20%–30%. Data not shown have an RSE greater than 30%.

¹Persons of Hispanic origin may be of any race. Race-specific estimates are tabulated according to the 1997 *Revisions to the Standards for the Classification of Federal Data on Race and Ethnicity*. The single-race categories plus multiple-race category shown in the table conform to the 1997 Standards. Starting with 2003 data, race responses of other race and unspecified multiple race were treated as missing, and then race was imputed if these were the only race responses. Almost all persons with a race response of other race were of Hispanic origin. See Appendix II, Hispanic origin; Race.

²Includes all persons not shown separately.

³Persons not covered by private insurance, Medicaid, Children’s Health Insurance Program (CHIP), state-sponsored or other government-sponsored health plans (starting in 1997), Medicare, or military plans are considered to have no health insurance coverage. Persons with only Indian Health Service coverage are considered to have no health insurance coverage. Health insurance coverage is at the time of interview.

⁴Preliminary data based on the National Health Interview Survey’s Early Release program. Estimates based on the preliminary 6-month file may differ from estimates based on the final annual file and have larger standard errors associated with them than standard errors based on a final annual file. Available from: Martinez ME, Cohen RA. Health insurance coverage: Early release of estimates from the National Health Interview Survey, January–June 2015. NCHS. November 2015. Available from: <http://www.cdc.gov/nchs/nhis/releases.htm> and National Health Interview Survey, 2015 preliminary file. For more information, visit: <http://www.cdc.gov/nchs/nhis.htm>.

⁵Three-year average annual estimates are shown in order to present estimates for the American Indian or Alaska Native and the multiple-race populations. Annual estimates are not stable for smaller population groups.

NOTES: Also see Tables 102–105 and Figure 16. Ties in highest and lowest rates were resolved by looking at additional decimal places. See Technical Notes.
