</table>

**Salmonellosis, excluding *Salmonella***

- Typhi infection and *Salmonella*
- Paratyphi infection
- Shigellosis
- Spotted fever rickettsiosis
- Tuberculosis

**Sexually transmitted diseases**:

- Syphilis
- Gonorrhea
- Chlamydia
- Herpes
- Syphilis congenital

**Tuberculosis**:

- Primary and secondary
- Unknown or late
- Early, nonprimary and nonsecondary
- Unknown or late

Table IDNotif. Selected nationally notifiable disease rates and number of new cases: United States, selected years 1950–2019—Con.

Excel version (with more data years and standard errors when available): https://www.cdc.gov/nchs/hus/contents2020-2021.htm#Table-IDNotif

[Data are based on reporting by state health departments]

- - - Data not available.
0.00 Quantity more than zero but less than 0.05.
- Quantity zero.
1Anti-HCV antibody test became available in May 1990. Total number of cases in 2019 is based on 45 reporting jurisdictions.
2Not nationally notifiable before 1991. National surveillance case definition was revised in 2008, 2011, and 2017, and probable cases were not reported before 2008.
3Case findings confirmed by an expert panel that reviews all paralytic poliomyelitis cases and laboratory tests.
4Starting in January 2019, cases began to be reported as salmonellosis (excluding Salmonella Typhi infection and Salmonella Paratyphi infection). In 2018, cases were reported as salmonellosis (excluding paratyphoid fever and typhoid fever). Before 2018, cases of paratyphoid fever were considered salmonellosis.
5Before 2010 data, cases of spotted fever rickettsiosis were reported as Rocky Mountain spotted fever (RMSF). Because serologic tests commonly used to diagnose RMSF may be disease caused by other spotted fever rickettsial infections. For that reason, since 2010, the term spotted fever rickettsiosis is used. Data include confirmed and probable cases.
6Case reporting began in 1953. Data before 1975 are not comparable with subsequent years because of changes in reporting criteria effective in 1975.
7In 1950, cases for people in Alaska and Hawaii were excluded. Starting with 1991, data include both civilian and military cases. Cases and rates shown do not include U.S. territories of Guam, Puerto Rico, Northern Mariana Islands, American Samoa, and U.S. Virgin Islands.
8Includes stage of syphilis not stated.
9Rates include all cases of congenitally acquired syphilis per 100,000 live births. Cases of congenitally acquired syphilis were reported through 1994. Starting with 1995 data, only congenital syphilis cases for those under age 1 year are reported.
10Not nationally notifiable before 1994. In 1994–1999, cases for New York were exclusively reported by New York City. Starting with 2000 data, cases for New York include the entire state.
11Data for 1994 do not include cases from Georgia.

NOTES: The total resident population was used to calculate all rates except for sexually transmitted disease (STD) rates before 1991; STD rates before 1991 used the civilian population. See Sources and Definitions, Sexually Transmitted Disease (STD) Surveillance; Population Census and Population Estimates. Population data from states where diseases were not notifiable or not available are excluded from rate calculations because data availability depends on the reporting rules for each disease; see Sources and Definitions, Notifiable disease. Due to the coronavirus disease 2019 (COVID-19) pandemic, 2019 data from some jurisdictions may be incomplete. For information on the impact of COVID-19 on disease reporting and the underreporting of notifiable diseases, see Sources and Definitions, Notifiable disease; National Notifiable Disease Surveillance System (NNDSS). Data for additional years are available in the Excel spreadsheet version of this table on the Health, United States website at: https://www.cdc.gov/nchs/hus/index.htm. Data have been revised and differ from previous editions of Health, United States.
