

**Figure 12.1. Percentage of adults aged 65 years and over who need help with personal care from other persons: United States, 1997-2009**

NOTES: Personal care needs, or activities of daily living (ADLs), include eating, bathing, dressing, or getting around inside the person's home. The analyses excluded persons with unknown information on personal care needs (about 0.0% of respondents each year). Beginning with the 2003 data, the National Health Interview Survey transitioned to weights derived from the 2000 census. In this Early Release, estimates for 2000-2002 were recalculated using weights derived from the 2000 census. See "About This Early Release" for more details.

DATA SOURCE: CDC/NCHS, National Health Interview Survey, 1997-2009, Family Core component. Data are based on household interviews of a sample of the civilian noninstitutionalized population.

- In 2009, 6.4% (95% confidence interval = 5.80%-6.92%) of adults aged 65 years and over needed help with personal care from other persons. This estimate was the same as the 2008 estimate.
- The annual percentage of adults who needed help with personal care from other persons ranged from 6.1% in 2006 to 6.9% in 2007.

**Figure 12.2. Percentage of adults aged 65 years and over who need help with personal care from other persons, by age group and sex: United States, 2009**

NOTES: Personal care needs, or activities of daily living (ADLs), include eating, bathing, dressing, or getting around inside the person's home.

DATA SOURCE: CDC/NCHS, National Health Interview Survey, 2009, Family Core component. Data are based on household interviews of a sample of the civilian noninstitutionalized population.

- For both sexes combined, adults aged 85 years and over (19.5%) were more than six times as likely as adults aged 65–74 (3.1%) to need help with personal care from other persons.
- For adults aged 85 years and over, women were more likely than men to need help with personal care.

**Figure 12.3. Age-sex-adjusted percentage of adults aged 65 years and over who need help with personal care from other persons, by race/ethnicity: United States, 2009**

NOTES: Personal care needs, or activities of daily living (ADLs), include eating, bathing, dressing, or getting around inside the person's home. Estimates are age-sex adjusted using the projected 2000 U.S. population as the standard population and using three age groups: 65-74 years, 75-84 years, and 85 years and over.

DATA SOURCE: CDC/NCHS, National Health Interview Survey, 2009, Family Core component. Data are based on household interviews of a sample of the civilian noninstitutionalized population.

- The age-sex-adjusted percentage of persons who needed help with personal care from other persons was 9.9% for Hispanic persons, 5.5% for non-Hispanic white persons, and 11.4% for non-Hispanic black persons.
- Non-Hispanic white persons were less likely to need help with personal care from other persons than Hispanic persons or non-Hispanic black persons.
