Residential Children (GA)

FLOW CHECK G-2: This flow check will identify a focal residential child. We will select 1 focal residential child with the following guidelines:
- for all R with GA_BKIDELG[x]=1, select the youngest one [lowest crage[x]]—that is, selects youngest Bio kid.
- Else if none of GA_BKIDELG[x]=1 and GA_AKIDELG[x]=1 then select youngest adopted child
- Else if none of GA_BKIDELG[x]=1 and none of GA_AKIDELG[x]=1 then select youngest step or partner’s child in the household (lowest crage[x] for GA_HHKIDELG[X]=1)

This will give priority to a biological residential child to be selected as a focal child.

Create variables to put data for selected focal child.
- RFNAM (Name of focal residential child)
- RFAGE (Age of focal residential child)
- RFSEX (Gender of focal residential child)
