About the 2014 State Estimate Web Tables Supplement to Data Brief #227

The Long-Term Care Statistics Branch is pleased to release adult day services center participant-specific state estimate web tables, using data from the second wave of the National Study of Long-Term Care Providers (NSLTCP) conducted in 2014 by the National Center for Health Statistics (NCHS).

These adult day services center participant-specific state web tables complement Data Brief #227.

Table 1 provides state estimates of the characteristics presented in Data Brief #227 and Table 2 provides the standard errors for those estimates.

Estimates are presented as percentages. Data are presented in the state web tables only if they meet NCHS' confidentiality standards. Footnotes are included in the state web tables to indicate if estimates do not meet NCHS' confidentiality standards. The data sources and methodology used to develop the state web tables are the same as that used for *NCHS Data Brief #227*. For more information on the data source and methodology, please see the "Data source and methods" section in Data Brief #227.

About NSLTCP

NSLTCP provides reliable, accurate, relevant and timely statistical information to support and inform long-term care services policy, research, and practice. The main goals of NSLTCP are to: (1) estimate the supply, provision and use of paid, regulated long-term care services in five major sectors; (2) estimate key policy-relevant characteristics of providers and service users, and provider practices; (3) produce national and state-level estimates, where feasible; (4) compare estimates among sectors; and (5) monitor trends over time.

Information on NSLTCP and additional products is available at: <http://www.cdc.gov/nchs/nsltcp.htm>.

NSLTCP comprises two components: (1) survey data collected by NCHS on assisted living and similar residential care communities and residents, and adult day services centers and participants; and (2) administrative data on nursing homes and residents, home health agencies and patients, and hospices and patients obtained from the Centers for Medicare & Medicaid Services. The restricted 2014 survey data files for the residential care community and adult day services center sectors are available through NCHS' Research Data Center (http://www.cdc.gov/nchs/nsltcp/nsltcp_rdc.htm).

The adult day services center survey was conducted between June 2014 and January 2015. NSLTCP uses a multi-mode survey protocol with mail, web, and computer-assisted telephone follow-up for nonresponse. The questionnaires included survey items on provider characteristics such as ownership, size, number of years in operation, services offered, selected practices, and staffing in addition to aggregate service user characteristics, such as age, sex, race, and the number of participants needing assistance with activities of daily living. Survey data were collected by RTI International under contract to NCHS. The 2014 adult day services center mail questionnaire and survey documentation are available at: http://www.cdc.gov/nchs/nsltcp/nsltcp_questionnaires.htm.

The frame obtained from the National Adult Day Services Association had 5,678 adult day services centers that self-identified as adult day care, adult day services, or adult day health services centers. After removing duplicates, the final frame consisted of 5,443 adult day services centers, which were all included in the data collection efforts. Of the 4,751 in-scope and presumed in-scope ADSCs, 2,763 of them completed the survey questionnaire, for a response rate (for differential probabilities of selection) of 58.0% (this is calculated by using AAPOR's Response Rate 4).

If you have any questions, please contact the Long-Term Care Statistics Branch at lcsbfeedback@cdc.gov or (301) 458-4747.
