

## Deaths: Leading Causes for 2014

by Melonie Heron, Ph.D., Division of Vital Statistics

### Abstract

**Objectives**—This report presents final 2014 data on the 10 leading causes of death in the United States by age, sex, race, and Hispanic origin. Leading causes of infant, neonatal, and postneonatal death are also presented. This report supplements “Deaths: Final Data for 2014,” the National Center for Health Statistics’ annual report of final mortality statistics.

**Methods**—Data in this report are based on information from all death certificates filed in the 50 states and the District of Columbia in 2014. Causes of death classified by the *International Classification of Diseases, Tenth Revision* (ICD–10) are ranked according to the number of deaths assigned to rankable causes. Cause-of-death statistics are based on the underlying cause of death.

**Results**—In 2014, the 10 leading causes of death were, in rank order: Diseases of heart; Malignant neoplasms; Chronic lower respiratory diseases; Accidents (unintentional injuries); Cerebrovascular diseases; Alzheimer’s disease; Diabetes mellitus; Influenza and pneumonia; Nephritis, nephrotic syndrome and nephrosis; and Intentional self-harm (suicide). They accounted for 74% of all deaths occurring in the United States. Differences in the rankings are evident by age, sex, race, and Hispanic origin. Leading causes of infant death for 2014 were, in rank order: Congenital malformations, deformations and chromosomal abnormalities; Disorders related to short gestation and low birth weight, not elsewhere classified; Newborn affected by maternal complications of pregnancy; Sudden infant death syndrome; Accidents (unintentional injuries); Newborn affected by complications of placenta, cord and membranes; Bacterial sepsis of newborn; Respiratory distress of newborn; Diseases of the circulatory system; and Neonatal hemorrhage. Important variations in the leading causes of infant death are noted for the neonatal and postneonatal periods.

**Keywords:** mortality • racial and ethnic differences • sex differences • vital statistics

### Introduction

Ranking causes of death is a popular method of presenting mortality statistics. Leading cause-of-death data have been published since 1952 (beginning with 1949 mortality data), when official tabulations ranking causes of death were first introduced (1). Users of this method of presentation should be aware of its inherent limitations. Ranking causes of death is, to some extent, an arbitrary procedure. The rank order of any particular cause of death will depend on the list of causes from which the selection is made and on the rules applied in making the selection. Different cause lists and ranking rules will typically produce different leading causes of death. Recognizing the need for a consistent ranking procedure to be used by state health departments and the National Office of Vital Statistics, in 1951 the Public Health Conference on Records and Statistics recommended that state and federal agencies responsible for identifying diseases of public health importance adopt a uniform ranking procedure using a standard list of causes of death (2). The procedures implemented in 1952 are essentially the same as those currently used by the National Center for Health Statistics (NCHS); however, the cause-of-death lists have been expanded and altered over time with each subsequent revision of the *International Classification of Diseases* (ICD). Cause-of-death data are based on the underlying cause of death.

Cause-of-death ranking is a useful tool for illustrating the relative burden of cause-specific mortality. However, it should be used with a clear understanding of what the rankings mean. Literally, the rankings denote the most frequently occurring causes of death among those causes eligible to be ranked. Rankings do not illustrate cause-specific mortality risk as depicted by mortality rates. The rank of a specific cause (i.e., its mortality burden relative to other causes) may decline over time even if its mortality rate has not changed, or its rank may remain the same over time even if its mortality rate is declining.

It is also important to note that rankings do not necessarily denote the causes of death of greatest public health importance. Some causes of death of public health significance are excluded from the ranking procedure. For example, Malignant neoplasms of the trachea, bronchus and lung (lung cancer) and Motor vehicle accidents are not rankable causes of death (see “Procedures for ranking causes of death”), although they can be identified using the standard mortality tabulation lists. If these causes were included in the current rankings, lung cancer would be placed among the 10 leading causes of death with a rank of 3rd, whereas Motor vehicle accidents would rank 13th. However, each of these is incorporated into broader rankable categories, namely, Malignant neoplasms and Accidents (unintentional injuries), respectively. Although not perfectly suitable in all circumstances, the current framework provides a rankable list of causes of death that has broad appeal and acceptance in the general public health community.

Another tool used in this report to depict the relative burden of cause-specific mortality is the proportion of total deaths from the rankable causes. This maps directly to the rankings such that, within a given year or population group, the causes with the highest rankings also have the highest proportion of total deaths. When making comparisons over time, however, it is important to note that the rank of a specific cause may remain the same even though the proportion of deaths attributable to that cause may have changed. Similarly, two population groups may have the same rank for a specific cause but different attributable proportions.

This report presents final 2014 data on leading causes of death in the United States by age, sex, race, and Hispanic origin. These data accompany the release of final national mortality statistics for 2014, which are presented in a separate report (3). Further detail beyond that published in this report is provided in leading-cause work tables available from: [http://www.cdc.gov/nchs/nvss/mortality\\_tables.htm#icod](http://www.cdc.gov/nchs/nvss/mortality_tables.htm#icod). Also presented in this report is the procedure used by NCHS to rank causes of death, along with tables showing causes that are designated as rankable.

## Data and Methods

### Data

Data in this report are based on information from all death certificates filed in the 50 states and the District of Columbia in 2014. Death certificates are generally completed by funeral directors, attending physicians, medical examiners, and coroners. Cause-of-death statistics for 2014 presented in this report are classified in accordance with the 10th revision of ICD (ICD–10) (4). Discussions of the cause-of-death classification and coding rule changes in data year 2014 are provided in the [Technical Notes](#).

### Procedures for ranking causes of death

The procedures used by NCHS for ranking causes of death are consistent with the recommendations of the 1951 Public

Health Conference on Records and Statistics (2). Causes are ranked according to the number of deaths assigned to rankable causes. The number of deaths is used as the ranking criterion because it most accurately reflects the frequency of cause-specific mortality. Changes in the number of deaths in 2014 compared with 2013 were tested for statistical significance. Unless otherwise specified, reported changes are statistically significant. Additional information on statistical testing is described elsewhere (3).

Although crude death rates could technically be used as the ranking criterion because the population denominator of each rate is constant across all cause-of-death categories, these rates are less than ideal. Crude death rates are typically expressed per 100,000 population and are often rounded to one decimal place, reducing the precision of the ranking criterion. This is especially problematic when ranking causes of death for small population subgroups or geographic areas, because it may be impossible to differentiate the ranks for several causes. Age-adjusted death rates should never be used to rank causes of death. The numerical value of the age-adjusted death rate depends on the population age distribution used to standardize the rate (5). Thus, rankings based on age-adjusted death rates will tend to vary depending on which standard is used. For example, when the standard age distribution gives more weight to the older population, the rank of causes of death that primarily affect the older population tends to be higher, and the rank of causes that primarily affect the younger population tends to be lower.

The original cause list from which rankable causes of death were selected according to the recommendations of the 1951 Conference (2) was the “List of 64 Selected Causes of Death” prepared for use with the sixth revision of ICD. With each subsequent ICD revision, the cause list from which rankable causes are selected has changed to reflect the improved classification system. Developed for use with ICD–10, the “List of 113 Selected Causes of Death and Enterocolitis due to *Clostridium difficile*” (6) shown in [Table A](#) is used to select 50 rankable causes (denoted by #) from which the leading causes presented in [Tables 1](#) and [2](#) are derived.

Selection of the 50 rankable causes was guided by some basic principles. As in the past, vaguely defined categories were excluded from selection as rankable causes. These included the category “Symptoms, signs and abnormal clinical and laboratory findings, not elsewhere classified” and all categories beginning with the words “other,” “all other,” “certain other,” or “unspecified.” Among the remaining cause-of-death categories, decisions were made to select as rankable the causes of death considered most useful from a public health perspective, with the following condition: The rankable causes must be mutually exclusive. If a category containing subcategories (such as Tuberculosis or Malignant neoplasms) is selected as a rankable cause, its component parts are not selected as rankable. Efforts were also made to maintain historical continuity where possible.

Beginning with 1980 mortality data, NCHS introduced a separate ranking procedure for infant causes of death using a specialized list of infant causes. This was done to include in the rankings causes specific to infancy (especially the perinatal period—the period beginning shortly before and ending shortly

**Table A. List of 113 selected causes of death and Enterocolitis due to *Clostridium difficile***

[An asterisk (\*) preceding a cause-of-death code indicates that the code is not included in the *International Classification of Diseases, Tenth Revision* (ICD-10); see Technical Notes]

Number <sup>1</sup>	Cause of death (based on ICD-10)
1#	Salmonella infections . . . . . (A01–A02)
2#	Shigellosis and amebiasis . . . . . (A03,A06)
3	Certain other intestinal infections . . . . . (A04,A07–A09)
#	Tuberculosis . . . . . (A16–A19)
4	Respiratory tuberculosis . . . . . (A16)
5	Other tuberculosis . . . . . (A17–A19)
6#	Whooping cough . . . . . (A37)
7#	Scarlet fever and erysipelas . . . . . (A38,A46)
8#	Meningococcal infection . . . . . (A39)
9#	Septicemia . . . . . (A40–A41)
10#	Syphilis . . . . . (A50–A53)
11#	Acute poliomyelitis . . . . . (A80)
12#	Arthropod-borne viral encephalitis . . . . . (A83–A84,A85.2)
13#	Measles . . . . . (B05)
14#	Viral hepatitis . . . . . (B15–B19)
15#	Human immunodeficiency virus (HIV) disease . . . . . (B20–B24)
16#	Malaria . . . . . (B50–B54)
17	Other and unspecified infectious and parasitic diseases and their sequelae . . . . . (A00,A05,A20–A36,A42–A44,A48–A49,A54–A79,A81–A82, A85.0–A85.1,A85.8,A86–B04,B06–B09,B25–B49,B55–B99)
#	Malignant neoplasms . . . . . (C00–C97)
18	Malignant neoplasms of lip, oral cavity and pharynx . . . . . (C00–C14)
19	Malignant neoplasm of esophagus . . . . . (C15)
20	Malignant neoplasm of stomach . . . . . (C16)
21	Malignant neoplasms of colon, rectum and anus . . . . . (C18–C21)
22	Malignant neoplasms of liver and intrahepatic bile ducts . . . . . (C22)
23	Malignant neoplasm of pancreas . . . . . (C25)
24	Malignant neoplasm of larynx . . . . . (C32)
25	Malignant neoplasms of trachea, bronchus and lung . . . . . (C33–C34)
26	Malignant melanoma of skin . . . . . (C43)
27	Malignant neoplasm of breast . . . . . (C50)
28	Malignant neoplasm of cervix uteri . . . . . (C53)
29	Malignant neoplasms of corpus uteri and uterus, part unspecified . . . . . (C54–C55)
30	Malignant neoplasm of ovary . . . . . (C56)
31	Malignant neoplasm of prostate . . . . . (C61)
32	Malignant neoplasms of kidney and renal pelvis . . . . . (C64–C65)
33	Malignant neoplasm of bladder . . . . . (C67)
34	Malignant neoplasms of meninges, brain and other parts of central nervous system . . . . . (C70–C72)
	Malignant neoplasms of lymphoid, hematopoietic and related tissue . . . . . (C81–C96)
35	Hodgkin's disease . . . . . (C81)
36	Non-Hodgkin's lymphoma . . . . . (C82–C85)
37	Leukemia . . . . . (C91–C95)
38	Multiple myeloma and immunoproliferative neoplasms . . . . . (C88,C90)
39	Other and unspecified malignant neoplasms of lymphoid, hematopoietic and related tissue . . . . . (C96)
40	All other and unspecified malignant neoplasms . . . . . (C17,C23–C24,C26–C31,C37–C41,C44–C49,C51–C52, C57–C60,C62–C63,C66,C68–C69,C73–C80,C97)
41#	In situ neoplasms, benign neoplasms and neoplasms of uncertain or unknown behavior . . . . . (D00–D48)
42#	Anemias . . . . . (D50–D64)
43#	Diabetes mellitus . . . . . (E10–E14)
#	Nutritional deficiencies . . . . . (E40–E64)
44	Malnutrition . . . . . (E40–E46)
45	Other nutritional deficiencies . . . . . (E50–E64)
46#	Meningitis . . . . . (G00,G03)
47#	Parkinson's disease . . . . . (G20–G21)
48#	Alzheimer's disease . . . . . (G30)
	Major cardiovascular diseases . . . . . (I00–I78)
#	Diseases of heart . . . . . (I00–I09,I11,I13,I20–I51)
49	Acute rheumatic fever and chronic rheumatic heart diseases . . . . . (I00–I09)
50	Hypertensive heart disease . . . . . (I11)
51	Hypertensive heart and renal disease . . . . . (I13)

Number <sup>1</sup>	Cause of death (based on ICD-10)
	Ischemic heart diseases . . . . . (I20–I25)
52	Acute myocardial infarction . . . . . (I21–I22)
53	Other acute ischemic heart diseases . . . . . (I24)
	Other forms of chronic ischemic heart disease . . . . . (I20, I25)
54	Atherosclerotic cardiovascular disease, so described . . . . . (I25.0)
55	All other forms of chronic ischemic heart disease . . . . . (I20, I25.1–I25.9)
	Other heart diseases . . . . . (I26–I51)
56	Acute and subacute endocarditis . . . . . (I33)
57	Diseases of pericardium and acute myocarditis . . . . . (I30–I31, I40)
58	Heart failure . . . . . (I50)
59	All other forms of heart disease . . . . . (I26–I28, I34–I38, I42–I49, I51)
60#	Essential hypertension and hypertensive renal disease . . . . . (I10, I12, I15)
61#	Cerebrovascular diseases . . . . . (I60–I69)
62#	Atherosclerosis . . . . . (I70)
	Other diseases of circulatory system . . . . . (I71–I78)
63#	Aortic aneurysm and dissection . . . . . (I71)
64	Other diseases of arteries, arterioles and capillaries . . . . . (I72–I78)
65	Other disorders of circulatory system . . . . . (I80–I99)
#	Influenza and pneumonia . . . . . (J09–J18)
66	Influenza . . . . . (J09–J11)
67	Pneumonia . . . . . (J12–J18)
	Other acute lower respiratory infections . . . . . (J20–J22, U04)
68#	Acute bronchitis and bronchiolitis . . . . . (J20–J21)
69	Other and unspecified acute lower respiratory infection . . . . . (J22, U04)
#	Chronic lower respiratory diseases . . . . . (J40–J47)
70	Bronchitis, chronic and unspecified . . . . . (J40–J42)
71	Emphysema . . . . . (J43)
72	Asthma . . . . . (J45–J46)
73	Other chronic lower respiratory diseases . . . . . (J44, J47)
74#	Pneumoconioses and chemical effects . . . . . (J60–J66, J68)
75#	Pneumonitis due to solids and liquids . . . . . (J69)
76	Other diseases of respiratory system . . . . . (J00–J06, J30–J39, J67, J70–J98)
77#	Peptic ulcer . . . . . (K25–K28)
78#	Diseases of appendix . . . . . (K35–K38)
79#	Hernia . . . . . (K40–K46)
#	Chronic liver disease and cirrhosis . . . . . (K70, K73–K74)
80	Alcoholic liver disease . . . . . (K70)
81	Other chronic liver disease and cirrhosis . . . . . (K73–K74)
82#	Cholelithiasis and other disorders of gallbladder . . . . . (K80–K82)
#	Nephritis, nephrotic syndrome and nephrosis . . . . . (N00–N07, N17–N19, N25–N27)
83	Acute and rapidly progressive nephritic and nephrotic syndrome . . . . . (N00–N01, N04)
84	Chronic glomerulonephritis, nephritis and nephropathy not specified as acute or chronic, and renal sclerosis unspecified . . . . . (N02–N03, N05–N07, N26)
85	Renal failure . . . . . (N17–N19)
86	Other disorders of kidney . . . . . (N25, N27)
87#	Infections of kidney . . . . . (N10–N12, N13.6, N15.1)
88#	Hyperplasia of prostate . . . . . (N40)
89#	Inflammatory diseases of female pelvic organs . . . . . (N70–N76)
#	Pregnancy, childbirth and the puerperium . . . . . (O00–O99)
90	Pregnancy with abortive outcome . . . . . (O00–O07)
91	Other complications of pregnancy, childbirth and the puerperium . . . . . (O10–O99)
92#	Certain conditions originating in the perinatal period . . . . . (P00–P96)
93#	Congenital malformations, deformations and chromosomal abnormalities . . . . . (Q00–Q99)
94	Symptoms, signs and abnormal clinical and laboratory findings, not elsewhere classified . . . . . (R00–R99)
95	All other diseases . . . . . (residual)
#	Accidents (unintentional injuries) . . . . . (V01–X59, Y85–Y86)
	Transport accidents . . . . . (V01–V99, Y85)
96	Motor vehicle accidents . . . . . (V02–V04, V09.0, V09.2, V12–V14, V19.0–V19.2, V19.4–V19.6, V20–V79, V80.3–V80.5, V81.0–V81.1, V82.0–V82.1, V83–V86, V87.0–V87.8, V88.0–V88.8, V89.0, V89.2)
97	Other land transport accidents . . . . . (V01, V05–V06, V09.1, V09.3–V09.9, V10–V11, V15–V18, V19.3, V19.8–V19.9, V80.0–V80.2, V80.6–V80.9, V81.2–V81.9, V82.2–V82.9, V87.9, V88.9, V89.1, V89.3, V89.9)
98	Water, air and space, and other and unspecified transport accidents and their sequelae . . . . . (V90–V99, Y85)

**Table A. List of 113 selected causes of death and Enterocolitis due to *Clostridium difficile*—Con.**

[An asterisk (\*) preceding a cause-of-death code indicates that the code is not included in the *International Classification of Diseases, Tenth Revision* (ICD-10); see Technical Notes]

Number <sup>1</sup>	Cause of death (based on ICD-10)
	Nontransport accidents . . . . . (W00–X59,Y86)
99	Falls . . . . . (W00–W19)
100	Accidental discharge of firearms . . . . . (W32–W34)
101	Accidental drowning and submersion . . . . . (W65–W74)
102	Accidental exposure to smoke, fire and flames . . . . . (X00–X09)
103	Accidental poisoning and exposure to noxious substances . . . . . (X40–X49)
104	Other and unspecified nontransport accidents and their sequelae . . . . . (W20–W31,W35–W64,W75–W99,X10–X39,X50–X59,Y86)
#	Intentional self-harm (suicide) . . . . . (*U03,X60–X84,Y87.0)
105	Intentional self-harm (suicide) by discharge of firearms . . . . . (X72–X74)
106	Intentional self-harm (suicide) by other and unspecified means and their sequelae . . . . . (*U03,X60–X71,X75–X84,Y87.0)
#	Assault (homicide) . . . . . (*U01–*U02,X85–Y09,Y87.1)
107	Assault (homicide) by discharge of firearms . . . . . (*U01.4,X93–X95)
108	Assault (homicide) by other and unspecified means and their sequelae . . . . . (*U01.0–*U01.3,*U01.5–*U01.9,*U02,X85–X92,X96–Y09,Y87.1)
109#	Legal intervention . . . . . (Y35,Y89.0)
	Events of undetermined intent . . . . . (Y10–Y34,Y87.2,Y89.9)
110	Discharge of firearms, undetermined intent . . . . . (Y22–Y24)
111	Other and unspecified events of undetermined intent and their sequelae . . . . . (Y10–Y21,Y25–Y34,Y87.2,Y89.9)
112#	Operations of war and their sequelae . . . . . (Y36,Y89.1)
113#	Complications of medical and surgical care . . . . . (Y40–Y84,Y88)
#	Enterocolitis due to <i>Clostridium difficile</i> . . . . . (A04.7) <sup>2</sup>

<sup>1</sup>Causes labeled # are ranked to determine leading causes of death for specified population groups. Only mutually exclusive categories are numbered.

<sup>2</sup>Included in “Certain other intestinal infections (A04,A07–A09)” shown above.

after birth) that would otherwise be excluded. The ICD-10 “List of 130 Selected Causes of Infant Death” (6) (Table B) is used to select 71 rankable causes of infant death from which the rankings in Tables 3 and 4 are derived. The same principles for selecting the rankable causes from the “List of 113 Selected Causes of Death” guided the selection of rankable causes from the infant cause list.

## Age groupings

Leading causes of death for those aged 1 year and over are presented in Tables 1 and 2 for the following age categories: 1–4, 5–9, 10–14, 15–19, 20–24, 25–34, 35–44, 45–54, 55–64, 65 and over, 65–74, 75–84, and 85 and over. This set of age categories was adopted in 1999 in response to an increasing number of requests from data users for more age detail, and it represents a substantial expansion from the age categories previously used in these tables to present leading-cause data (7). Leading causes by 5-year, 10-year, and selected age groupings are published on the NCHS website at [http://www.cdc.gov/nchs/nvss/mortality\\_tables.htm#icod](http://www.cdc.gov/nchs/nvss/mortality_tables.htm#icod). In this report, a discussion of leading causes by age uses the following summary age categories: 1–9, 10–24, 25–44, 45–64, 65 and over, and 85 and over. Tables 3 and 4, which present data for infants (under age 1 year), also show leading causes of death for the age subcategories neonatal (under 28 days) and postneonatal (28 days through 11 months).

The age grouping used when ranking causes of death can have an impact on the rankings assigned to any particular age (8). For example, in 2014, the rankings for the 10 leading causes of death for a 35-year-old woman were slightly different depending on whether the ranking was based on age group 35–39 or 35–44. To illustrate, the category Septicemia was not

ranked among the 10 leading causes for women aged 35–39, but it was ranked 10th for women aged 35–44. Pregnancy, childbirth and the puerperium was ranked ninth for women aged 35–39, but it was not ranked in the top 10 for women aged 35–44. Each aggregation of age resulted in a different understanding of the relative importance of Septicemia and Pregnancy, childbirth and the puerperium for women at or near age 35.

## Data by race and Hispanic origin

Leading-cause data are presented by race and Hispanic origin, which are reported separately on the death certificate. The race categories presented are: white, black, American Indian or Alaska Native (AIAN), and Asian or Pacific Islander (API). Data shown by race include persons of Hispanic origin. Data shown by Hispanic origin include persons of any race. The Hispanic-origin categories presented are: Hispanic, non-Hispanic white, and non-Hispanic black. Deaths for the AIAN, API, and Hispanic populations are understated to varying degrees because of net misclassification of race and Hispanic origin on the death certificate (see Technical Notes), so data for these groups should generally be interpreted with caution. However, racial or ethnic misclassification should not have a major impact on the cause-of-death rankings for the race and Hispanic-origin groups, or prevent comparisons of relative mortality burden across groups, because there is no reason to expect that racial or ethnic misclassification varies by cause of death.

## Results

In 2014, the 10 leading causes of death accounted for 74% of all deaths occurring in the United States. The rank order of causes in 2014 remained unchanged from 2013 (9).

**Table B. List of 130 selected causes of infant death**

[An asterisk (\*) preceding a cause-of-death code indicates that the code is not included in the *International Classification of Diseases, Tenth Revision* (ICD-10); see Technical Notes]

Number <sup>1</sup>	Cause of death (based on ICD-10)
	Certain infectious and parasitic diseases . . . . . (A00–B99)
1	Certain intestinal infectious diseases . . . . . (A00–A08)
2#	Diarrhea and gastroenteritis of infectious origin . . . . . (A09)
3#	Tuberculosis . . . . . (A16–A19)
4#	Tetanus . . . . . (A33,A35)
5#	Diphtheria . . . . . (A36)
6#	Whooping cough . . . . . (A37)
7#	Meningococcal infection . . . . . (A39)
8#	Septicemia . . . . . (A40–A41)
9#	Congenital syphilis . . . . . (A50)
10#	Gonococcal infection . . . . . (A54)
	Viral diseases . . . . . (A80–B34)
11#	Acute poliomyelitis . . . . . (A80)
12#	Varicella (chickenpox) . . . . . (B01)

130	Other external causes. . . . . (Y10–Y36)

<sup>1</sup>Causes labeled # are ranked to determine leading causes of infant death for specified population groups. Only mutually exclusive categories are numbered.

The number of deaths due to eight causes increased significantly in 2014 from 2013: Alzheimer's disease by 10.4%; unintentional injuries by 4.2%; Intentional self-harm (suicide) by 3.9%; Cerebrovascular diseases (stroke) by 3.2%; Nephritis, nephrotic syndrome and nephrosis (kidney disease) by 2.2%; Malignant neoplasms (cancer) and Diabetes mellitus (diabetes) by 1.2% each; and Diseases of heart (heart disease) by 0.5% (Table C). The number of deaths due to Influenza and pneumonia and Chronic lower respiratory diseases (CLRD) declined significantly in 2014 from 2013 by 3.1% and 1.4%, respectively.

The top two causes, heart disease and cancer, accounted for 45.9% of all deaths in 2014. CLRD ranked third, unintentional injuries fourth, and stroke fifth; together, these three causes accounted for 15.8% of all deaths in 2014. Completing the top 10 for 2014 were Alzheimer's disease (6th), diabetes (7th), Influenza and pneumonia (8th), kidney disease (9th), and suicide (10th) (Table C); these five causes accounted for 12.0% of deaths in 2014.

## Differences by sex

Similarities were observed in the ranking of certain causes of death among males and females in 2014. For both populations, heart disease and cancer ranked as the first and second leading causes of death, respectively (Figure 1, Table 1). In 2014, heart disease accounted for 24.5% of all deaths to males and 22.3% of all deaths to females. Cancer accounted for 23.4% of deaths to males and 21.6% of deaths to females.

Males and females diverged in the ranking of other causes of death. In 2014, unintentional injuries was the third leading cause of death for males, accounting for 6.4% of deaths in this group, but it was the sixth leading cause for females, accounting for 3.9% of deaths (Figure 1, Table 1). CLRD ranked fourth for males, accounting for 5.2% of deaths, but it ranked third for females, accounting for 6.0% of deaths. Stroke ranked fifth for males but fourth for females in 2014. Females had a higher relative burden of mortality from stroke, which accounted for 6.0% of all deaths to females but 4.2% of all deaths to males. Diabetes ranked sixth for males (3.1% of deaths) but seventh for females (2.7% of

**Table C. Deaths and percentage of total deaths for the 10 leading causes of death: United States, 2013 and 2014**

[An asterisk (\*) preceding a cause-of-death code indicates that the code is not included in the *International Classification of Diseases, Tenth Revision* (ICD-10); see Technical Notes]

Cause of death (based on ICD-10)	Rank <sup>1</sup>	2014		2013

... Category not applicable.

<sup>1</sup>Based on number of deaths.

deaths). Alzheimer's disease ranked eighth for males, accounting for 2.1% of deaths, but it ranked fifth for females, accounting for 5.0% of deaths. Influenza and pneumonia ranked ninth for males (2.0% of deaths) but eighth for females (2.2% of deaths).

Additionally, some of the 10 leading causes of death were unique to either population in 2014. Suicide ranked seventh for males (2.5% of deaths), but it was not ranked among the 10 leading causes for females. Chronic liver disease and cirrhosis was the 10th leading cause for males (1.9% of deaths), but it was not in the top 10 for females. Kidney disease ranked 9th (1.8% of deaths) and Septicemia ranked 10th (1.6% of deaths) for females, but neither was among the 10 leading causes of death for males.

Two causes changed rank in 2014 compared with 2013 (9) for males: Alzheimer's disease moved up from ninth to eighth rank, and Influenza and pneumonia moved down from eighth to ninth rank.

### Differences by age

In 2014, the leading cause of death varied by age group (Figure 2). The leading cause of death for the population aged 1-44 was unintentional injuries. The relative burden of mortality from this cause was far greater at younger ages, accounting for 31.5% of all deaths for age group 1-9, 39.7% of deaths for age group 10-24, and 28.3% of deaths for age group 25-44.

**Figure 1. Percent distribution of the 10 leading causes of death, by sex: United States, 2014**

**Figure 2. Percent distribution of the 10 leading causes of death, by age group: United States, 2014**

In contrast, unintentional injuries was the third leading cause of death for age group 45–64 (7.4% of deaths), and the seventh leading cause for those aged 85 and over (2.6% of deaths) and 65 and over (2.5% of deaths). For the population aged 45–64, the leading cause of death was cancer, accounting for 30.5% of deaths. Cancer was the second leading cause for the populations aged 65 and over (21.5% of deaths), 25–44 (12.6% of deaths), and 1–9 and 85 and over (12.2% of deaths each). Cancer was the fourth leading cause for those aged 10–24 (6.3% of deaths). For the population aged 65 and over, heart disease was the leading cause of death, accounting for 25.5% of deaths. It was also the leading cause of death for the population aged 85 and over, accounting for 29.2% of deaths. However, heart disease was the fifth leading cause for age groups 1–9 (3.5% of deaths) and 10–24 (3.4% of deaths); the third leading cause for age group 25–44 (11.6% of deaths); and the second leading cause for age group 45–64 (20.8% of deaths).

Other patterns in the leading causes of death were observed by age group (Figure 2). Generally, for younger age groups, external causes accounted for more deaths than other causes, whereas for older age groups, chronic diseases were far more prevalent than other causes. For the population aged 1–44, homicide and suicide were major causes of death: Homicide was the third leading cause of death for age group 10–24 (13.6% of deaths), the fourth leading cause for age group 1–9 (7.9% of deaths), and the fifth leading cause for age group 25–44 (5.7% of deaths). It was not among the 10 leading causes for the population aged 45 and over. Suicide was the second leading cause of death for age group 10–24 (17.4% of deaths) and the fourth leading cause for age group 25–44 (11.2% of deaths). In contrast, it was the eighth leading cause for those aged 45–64 (3.1% of deaths) and was not among the 10 leading causes for the population aged 65 and over or 85 and over. Congenital malformations, deformations and chromosomal abnormalities (congenital malformations) was a more prevalent cause of death at the youngest ages. It was the third leading cause for age group 1–9 (9.6% of deaths) and the sixth leading cause for age group 10–24 (1.7% of deaths) but was not among the 10 leading causes for the population aged 25 and over. Additional leading causes prevalent among the population aged 1–44 include stroke, Influenza and pneumonia, and diabetes. Chronic liver disease and cirrhosis and Human immunodeficiency virus (HIV) disease were among the leading causes of death for those aged 25–44.

For the population aged 45 and over, CLRD and stroke were major causes of death. CLRD was the third leading cause of death for those aged 65 and over (6.5% of deaths), and the fifth leading cause for those aged 85 and over (5.0% of deaths) and 45–64 (4.0% of deaths). In contrast, it ranked seventh for age groups 1–9 (2.0% of deaths) and 10–24 (0.8% of deaths), and it was not a top 10 cause of death for age group 25–44. Stroke was the fourth leading cause for the populations aged 85 and over (6.9% of deaths) and 65 and over (5.9% of deaths). However, it was the seventh leading cause for age group 45–64 (3.3% of deaths); the eighth leading cause for age group 25–44 (2.0% of deaths); and the ninth leading cause for age groups 1–9 (1.3% of deaths) and 10–24 (0.7% of deaths). Alzheimer's disease was

one of the major causes of death at the oldest ages, ranking third for those aged 85 and over (7.5% of deaths) and fifth for those aged 65 and over (4.8% of deaths). It was not one of the 10 leading causes for the population aged 64 and under. Additional leading causes more prevalent among the population aged 45 and over were diabetes, kidney disease, Chronic liver disease and cirrhosis, and Influenza and pneumonia.

## Differences by race

Table D shows variation across the four major race groups in the 10 leading causes of death in 2014. Deaths for the AIAN and API populations are underreported on the death certificate; see [Technical Notes](#). The four groups shared seven of the leading causes in common but had different relative disease burden. Heart disease was the first leading cause of death for the white, black, and AIAN populations, but it was the second leading cause for the API population. The relative burden of mortality from heart disease was 18.3% in the AIAN population compared with 23.7% in the black population, 23.4% in the white population, and 21.6% in the API population (Table D). Cancer was the first leading cause of death for the API population, but it was the second leading cause for the white, black, and AIAN groups. Cancer accounted for 26.8% of all deaths in the API population, 22.5% in the white population, 22.4% in the black population, and 17.5% in the AIAN population. CLRD ranked third for the white population, accounting for 6.0% of deaths in this group, but it ranked sixth for the AIAN (4.4% of deaths) and black (3.2% of deaths) populations, and seventh for the API (3.0% of deaths) population. Unintentional injuries, stroke, diabetes, and kidney disease also ranked among the top 10 causes of death for each race group. Unintentional injuries ranked fourth for the white (5.2% of deaths), black (4.6% of deaths), and API (4.3% of deaths) populations, but it ranked third for the AIAN (11.1% of deaths) population. Stroke ranked fifth for the white population but third for the black and API populations, and seventh for the AIAN population. The percentage of deaths attributable to stroke was highest for the API population (7.0% of all deaths) and lowest for the AIAN population (3.6% of deaths). Diabetes ranked seventh for the white population (2.7% of deaths) but fifth for the AIAN (5.2% of deaths), black (4.3% of deaths), and API (3.8% of deaths) populations. Kidney disease ranked 7th for the black population, 9th for the API population, and 10th for the AIAN and white populations. This cause accounted for 2.8% of deaths in the black population, 2.0% in the API population, 1.9% in the AIAN population, and 1.7% in the white population.

Some of the leading causes were shared by some groups but not by others. Alzheimer's disease ranked sixth for the white population, eighth for the API population, and ninth for the black population, but it was not among the top 10 for the AIAN population. Influenza and pneumonia ranked sixth for the API population, eighth for the white population, and ninth for the AIAN population, but it was not ranked in the 10 leading causes of death for the black population. Similarly, suicide was not ranked in the top 10 for the black population but was among the 10 leading causes for the other three groups: 8th for the AIAN population, 9th for the white population, and 10th for the API population.

**Table D. Deaths and percentage of total deaths for the 10 leading causes of death, by race: United States, 2014**

[Data for races other than white and black should be interpreted with caution because of misreporting of race on death certificates; see Technical Notes. An asterisk (\*) preceding a cause-of-death code indicates that the code is not included in the *International Classification of Diseases, Tenth Revision* (ICD-10); see Technical Notes]

<sup>1</sup>Based on number of deaths. Ranks above 10 are provided for informational purposes when a cause is among the top 10 for at least one of the groups being compared.

Furthermore, at least 1 of the 10 leading causes was unique to each of two groups. For the AIAN population, Chronic liver disease and cirrhosis ranked fourth but was not ranked in the top 10 for the other three race groups. For the black population, homicide ranked 8th and Septicemia 10th, but these causes were not ranked among the top 10 for the other race groups.

The rank order of several leading causes changed in 2014 from 2013 (9). For the white population, kidney disease moved down from 9th to 10th rank, and suicide moved up from 10th to 9th rank. For the black population, Alzheimer's disease and Septicemia switched ranks to become the 9th and 10th leading causes, respectively. For the AIAN population, chronic liver disease and cirrhosis moved up from fifth to fourth rank, and diabetes moved down from fourth to fifth rank.

## Differences by Hispanic origin

Table E contrasts the 10 leading causes of death for the Hispanic, non-Hispanic white, and non-Hispanic black populations in 2014. Deaths for the Hispanic population are underreported on the death certificate; see [Technical Notes](#). For the Hispanic population, cancer ranked first and heart disease second. In contrast, heart disease ranked first and cancer second for the non-Hispanic white and non-Hispanic black populations. The relative burden of both causes was lowest for the Hispanic population, in which cancer accounted for 21.5% of all deaths and heart disease for 20.1%. Cancer accounted for 22.6% of deaths in the non-Hispanic white population and 22.4% of deaths in the non-Hispanic black population. Heart disease accounted for 23.7% of deaths in both the non-Hispanic white and non-Hispanic black populations. Unintentional injuries ranked third for the Hispanic population, accounting for 7.3% of deaths, but it ranked fourth for the non-Hispanic white (5.1% of

deaths) and non-Hispanic black (4.6% of deaths) populations. The fourth-ranked cause for the Hispanic population was stroke, which ranked third for the non-Hispanic black population and fifth for the non-Hispanic white population. Diabetes ranked fifth for the Hispanic (4.6% of deaths) and non-Hispanic black (4.4% of deaths) populations but seventh for the non-Hispanic white population (2.5% of deaths). These five causes together accounted for 58.7% of deaths in the Hispanic population.

Chronic liver disease and cirrhosis was unique as a leading cause of death for the Hispanic population; it ranked sixth for this group but was not among the 10 leading causes of death for the non-Hispanic white and non-Hispanic black populations. Alzheimer's disease ranked seventh for the Hispanic population, sixth for the non-Hispanic white population, and ninth for the non-Hispanic black population. CLRD ranked much higher for the non-Hispanic white population (third) than for the non-Hispanic black (sixth) and Hispanic (eighth) populations. Influenza and pneumonia ranked ninth for the Hispanic population and eighth for the non-Hispanic white population, but it was not among the 10 leading causes of death for the non-Hispanic black population. Kidney disease ranked 10th for the Hispanic (1.9% of deaths) and non-Hispanic white (1.7% of deaths) populations but 7th for the non-Hispanic black population (2.8% of deaths).

Causes that ranked among the 10 leading causes for either the non-Hispanic white or non-Hispanic black groups but not for the Hispanic group were homicide, which ranked 8th for the non-Hispanic black population; Septicemia, which ranked 10th for the non-Hispanic black population; and suicide, which ranked 9th for the non-Hispanic white population.

In 2014, the rank order of the 10 leading causes by Hispanic origin were the same as in 2013 (9), with some exceptions. For the Hispanic population, Alzheimer's disease and CLRD switched

**Table E. Deaths and percentage of total deaths for the 10 leading causes of death, by Hispanic origin and race for non-Hispanic population: United States, 2014**

[Race and Hispanic origin are reported separately on the death certificate. Persons of Hispanic origin may be of any race. Data for Hispanic origin should be interpreted with caution because of misreporting of Hispanic origin on death certificates; see Technical Notes. An asterisk (\*) preceding a cause-of-death code indicates that the code is not included in the *International Classification of Diseases, Tenth Revision* (ICD-10); see Technical Notes]

ranks to become the seventh and eighth leading causes, respectively. For the non-Hispanic black population, unintentional injuries moved up from 5th to 4th rank; diabetes moved down from 4th to 5th rank; Alzheimer's disease moved up one rank to become the 9th leading cause; and Septicemia moved down one rank to become the 10th leading cause of death.

## Leading causes of infant death

The leading cause of infant death in 2014 was congenital malformations, which accounted for 20.4% of all infant deaths

(Table F). The second leading cause was Disorders related to short gestation and low birth weight, not elsewhere classified (18.0% of deaths). The third leading cause was Newborn affected by maternal complications of pregnancy (6.8% of deaths), and the fourth leading cause was Sudden infant death syndrome (SIDS) (6.7% of deaths). Unintentional injuries ranked fifth and accounted for 5.0% of deaths. In 2014, 56.9% of infant deaths were attributable to these five leading causes. Other leading causes in 2014 were Newborn affected by complications of placenta, cord and membranes (ranked 6th); Bacterial sepsis of newborn (7th); Respiratory distress of newborn (8th); Diseases

**Table F. Deaths and percentage of total deaths for the 10 leading causes of infant death: United States, 2013 and 2014**

Cause of death (based on <i>International Classification of Diseases, Tenth Revision</i> )	2014			2013		
	Rank <sup>1</sup>	Deaths	Percent of total deaths	Rank <sup>1</sup>	Deaths	Percent of total deaths

... Category not applicable.

<sup>1</sup>Based on number of deaths.

of the circulatory system (9th); and Neonatal hemorrhage (10th). Together, these 10 leading causes of infant death accounted for 69.1% of all infant deaths.

The rank order of the 10 leading causes of death among infants remained the same in 2014 as in 2013 (9).

## Neonatal and postneonatal mortality

Differences were evident when comparing leading causes of death in the neonatal (under 28 days after birth) and postneonatal (from 28 days through 11 months after birth) periods (Table G). Disorders related to short gestation and low birth weight, not elsewhere classified was the leading cause of neonatal death in 2014. In contrast, Congenital malformations was the leading cause in the postneonatal period. SIDS—the fourth leading cause of infant death overall—ranked second for postneonates, whereas congenital malformations ranked second for neonates. The remaining leading causes of neonatal death were characterized by conditions occurring in the perinatal period, whereas in the postneonatal period the remaining leading causes included several conditions prevalent among the general population. These included unintentional injuries, ranked third; homicide, ranked fifth; Influenza and pneumonia, ranked seventh; and Septicemia, ranked eighth.

The rank order of the 10 leading causes of neonatal deaths remained the same in 2014 as in 2013 (9). The rankings for the 10 leading causes of postneonatal deaths changed in 2014: Congenital malformations and SIDS switched ranks to become the first and second leading causes of postneonatal deaths, respectively.

Differences in infant mortality, including neonatal and postneonatal mortality, by race and Hispanic origin are detailed in Tables 3 and 4 but are not discussed. Race reported on the death certificate is considered to be fairly accurate for white and black infants; however, both race and Hispanic origin may be misreported for other groups (10–13); see Technical Notes. Consequently, readers are directed to a report using data from the linked file of live births and infant deaths for better measures of infant mortality by race and Hispanic origin (14).

## Discussion

This report presents leading causes of death in the United States by age, sex, race, and Hispanic origin, and for the infant, neonatal, and postneonatal periods. Cause-of-death ranking is a popular method of presenting mortality statistics and is a useful tool for illustrating the relative burden of cause-specific mortality,

**Table G. Deaths and percentage of total deaths for the 10 leading causes of neonatal and postneonatal deaths: United States, 2014**

[Neonatal deaths are those occurring less than 28 days after birth. Postneonatal deaths are those occurring from 28 days through 11 months after birth. An asterisk (\*) preceding a cause-of-death code indicates that the code is not included in the *International Classification of Diseases, Tenth Revision* (ICD–10); see Technical Notes]

<sup>1</sup>Based on number of deaths.

but it must be used cautiously with a clear understanding of the limitations underlying the method.

When comparing rankings across demographic groups or over time, careful note should be made of the age distribution of the populations being compared. Leading causes of death for populations with younger age distributions will tend to show higher rankings for causes of death that are prevalent among the young, such as unintentional injuries, homicide, and suicide. Leading causes for older populations will tend to show higher rankings for causes that are more prevalent among the elderly, such as Alzheimer's disease, heart disease, cancer, and stroke.

Consideration should also be given to the effects of random variation on cause-of-death rankings. When the number of events is small (perhaps fewer than 100 deaths), estimates of mortality risk are subject to random fluctuations; see [Technical Notes](#). Especially when comparing rankings based on small numbers of deaths between groups or over time, it is important to be aware that differences in relative rankings may be attributable to random variability.

Because the rank order of any particular cause of death will depend on the list of causes from which selection is made and on the rules applied in making the selection, a clearly defined and uniform method for ranking causes of death is vital to maintain consistency in the reporting of leading causes by federal and state agencies. The standard method and cause lists described in this and other publications (1–3,6) provide this needed structure.

## List of Detailed Tables

1. Deaths, percentage of total deaths, and death rates for the 10 leading causes of death in selected age groups, by race and sex: United States, 2014. . . . .	17
2. Deaths, percentage of total deaths, and death rates for the 10 leading causes of death in selected age groups, by Hispanic origin, race for non-Hispanic population, and sex: United States, 2014. . . . .	54
3. Infant, neonatal, and postneonatal deaths, percentage of total deaths, and mortality rates for the 10 leading causes of infant death, by race and sex: United States, 2014 . . . . .	76
4. Infant, neonatal, and postneonatal deaths, percentage of total deaths, and mortality rates for the 10 leading causes of infant death, by Hispanic origin, race for non-Hispanic population, and sex: United States, 2014 . . . . .	86

**Table 1. Deaths, percentage of total deaths, and death rates for the 10 leading causes of death in selected age groups, by race and sex: United States, 2014**

[Rates are per 100,000 population in specified group. Data for races other than white and black should be interpreted with caution because of misreporting of race on death certificates; see Technical Notes. An asterisk (\*) preceding a cause-of-death code indicates that the code is not included in the *International Classification of Diseases, Tenth Revision* (ICD-10); see Technical Notes]

Rank <sup>1</sup>	Cause of death (based on ICD-10), race, sex, and age	Number <sup>2</sup>	Percent of total deaths	Death Rate <sup>2</sup>	Rank <sup>1</sup>	Cause of death (based on ICD-10), race, sex, and age	Number <sup>2</sup>	Percent of total deaths	Death Rate <sup>2</sup>

**Table 1. Deaths, percentage of total deaths, and death rates for the 10 leading causes of death in selected age groups, by race and sex: United States, 2014—Con.**

[Rates are per 100,000 population in specified group. Data for races other than white and black should be interpreted with caution because of misreporting of race on death certificates; see Technical Notes. An asterisk (\*) preceding a cause-of-death code indicates that the code is not included in the *International Classification of Diseases, Tenth Revision* (ICD-10); see Technical Notes]

**Table 2. Deaths, percentage of total deaths, and death rates for the 10 leading causes of death in selected age groups, by Hispanic origin, race for non-Hispanic population, and sex: United States, 2014**

[Rates are per 100,000 population in specified group. Persons of Hispanic origin may be of any race. Data for Hispanic persons are not tabulated by race; data for non-Hispanic persons are tabulated by race. Data for Hispanic origin should be interpreted with caution because of misreporting of Hispanic origin on the death certificate; see Technical Notes. An asterisk (\*) preceding a cause-of-death code indicates that the code is not included in the *International Classification of Diseases, Tenth Revision* (ICD-10); see Technical Notes]

\* Figure does not meet standards of reliability or precision; see Technical Notes.

<sup>1</sup>Based on number of deaths.

<sup>2</sup>Figures for age not stated are included in "all ages" but not distributed among age groups.

<sup>3</sup>Includes deaths for "under 1 year."

SOURCE: NCHS, National Vital Statistics System, Mortality.

**Table 3. Infant, neonatal, and postneonatal deaths, percentage of total deaths, and mortality rates for the 10 leading causes of infant death, by race and sex: United States, 2014**

[Rates are infant (under 1 year), neonatal (under 28 days), and postneonatal (28 days through 11 months) deaths per 100,000 live births in specified group. Deaths for races other than white or black should be interpreted with caution because of inconsistencies between reporting race on birth and death certificates. Deaths are based on race of decedent; live births are based on race of mother; see Technical Notes. An asterisk (\*) preceding a cause-of-death code indicates that the code is not included in the *International Classification of Diseases, Tenth Revision* (ICD-10); see Technical Notes]

**Table 3. Infant, neonatal, and postneonatal deaths, percentage of total deaths, and mortality rates for the 10 leading causes of infant death, by race and sex: United States, 2014—Con.**

[Rates are infant (under 1 year), neonatal (under 28 days), and postneonatal (28 days through 11 months) deaths per 100,000 live births in specified group. Deaths for races other than white or black should be interpreted with caution because of inconsistencies between reporting race on birth and death certificates. Deaths are based on race of decedent; live births are based on race of mother; see Technical Notes. An asterisk (\*) preceding a cause-of-death code indicates that the code is not included in the *International Classification of Diseases, Tenth Revision* (ICD-10); see Technical Notes]

<sup>1</sup>Based on number of deaths.

SOURCE: NCHS, National Vital Statistics System, Mortality.

**Table 4. Infant, neonatal, and postneonatal deaths, percentage of total deaths, and mortality rates for the 10 leading causes of infant death, by Hispanic origin, race for non-Hispanic population, and sex: United States, 2014**

[Rates are infant (under 1 year), neonatal (under 28 days), and postneonatal (28 days through 11 months) deaths per 100,000 live births in specified group. Race and Hispanic origin are reported separately on the death certificate. Persons of Hispanic origin may be of any race. Data for Hispanic persons are not tabulated separately by race; data for non-Hispanic persons are tabulated by race. Data for Hispanic origin should be interpreted with caution because of inconsistencies between reporting Hispanic origin on birth and death certificates; see Technical Notes. National linked files should be used to measure infant mortality for specific Hispanic subgroups. An asterisk (\*) preceding a cause-of-death code indicates that the code is not included in the *International Classification of Diseases, Tenth Revision* (ICD-10); see Technical Notes]

**Table 4. Infant, neonatal, and postneonatal deaths, percentage of total deaths, and mortality rates for the 10 leading causes of infant death, by Hispanic origin, race for non-Hispanic population, and sex: United States, 2014—Con.**

[Rates are infant (under 1 year), neonatal (under 28 days), and postneonatal (28 days through 11 months) deaths per 100,000 live births in specified group. Race and Hispanic origin are reported separately on the death certificate. Persons of Hispanic origin may be of any race. Data for Hispanic persons are not tabulated separately by race; data for non-Hispanic persons are tabulated by race. Data for Hispanic origin should be interpreted with caution because of inconsistencies between reporting Hispanic origin on birth and death certificates; see Technical Notes. National linked files should be used to measure infant mortality for specific Hispanic subgroups. An asterisk (\*) preceding a cause-of-death code indicates that the code is not included in the *International Classification of Diseases, Tenth Revision* (ICD-10); see Technical Notes]

## Technical Notes

### Nature and sources of data

Data in this report are based on information from all death certificates that were filed in the 50 states and the District of Columbia in 2014 and processed by the National Center for Health Statistics (NCHS). The U.S. Standard Certificate of Death, which is used as a model by the states, was revised in 2003 (15,16). Prior to this, it had last been revised in 1989 (17,18). This report includes data for the District of Columbia and 46 states that used the 2003 revision in 2014 (Alaska, Arizona, Arkansas, California, Connecticut, Delaware, Florida, Georgia, Hawaii, Idaho, Illinois, Indiana, Iowa, Kansas, Kentucky, Louisiana, Maine, Massachusetts, Michigan, Minnesota, Mississippi, Missouri, Montana, Nebraska, Nevada, New Hampshire, New Jersey, New Mexico, New York, North Carolina, North Dakota, Ohio, Oklahoma, Oregon, Pennsylvania, Rhode Island, South Carolina, South Dakota, Tennessee, Texas, Utah, Vermont, Virginia, Washington, Wisconsin, and Wyoming) and the remaining 4 states that continued to use the 1989 revision in 2014 (Alabama, Colorado, Maryland, and West Virginia). Massachusetts and Virginia began using the 2003 revision in September 2014 and November 2014, respectively, so some of these states' data for the first part of the year were reported using the 1989 revision. Most of the items presented in this report are largely comparable despite changes to item wording and format in 2003; hence, data from both groups of reporting areas are combined unless otherwise stated.

Mortality statistics are based on information from death certificates submitted by the states and coded by NCHS through the Vital Statistics Cooperative Program. All of the states and the District of Columbia participated in this program and submitted mortality demographic and medical (cause-of-death) data for 2014 in electronic data files to NCHS. The mortality statistics in this report include deaths only of U.S. residents.

### Cause-of-death classification

The mortality statistics presented here were compiled in accordance with World Health Organization (WHO) regulations, which specify that member nations classify and code causes of death in accordance with the current revision of the *International Statistical Classification of Diseases and Related Health Problems* (ICD). ICD provides the basic guidance used in virtually all countries to code and classify causes of death. Effective with deaths occurring in 1999, the United States began using the 10th revision of this classification, ICD-10 (4).

ICD not only details disease classification but also provides definitions, tabulation lists, the format of the death certificate, and the rules for coding cause of death. Cause-of-death data presented in this publication were coded by procedures outlined in annual issues of the *NCHS Instruction Manual* (6,19–23). The manual includes rules for selecting the underlying cause of death for tabulation purposes, definitions, tabulation lists, and regulations on the use of the classification.

Prior to 1968, mortality medical data were based on manual coding of an underlying cause of death for each certificate in accordance with WHO rules. Effective with data year 1968, NCHS

converted to computerized coding of the underlying cause and manual coding of all causes (multiple causes) on the death certificate. In this system, called Automated Classification of Medical Entities (ACME) (23), multiple-cause codes serve as inputs to computer software that employs WHO rules to select the underlying cause. All cause-of-death data in this report were coded using ACME.

ACME is used to select the underlying cause of death for all death certificates in the United States. In addition, NCHS developed two computer systems as inputs to ACME. Beginning with 1990 data, the Mortality Medical Indexing, Classification, and Retrieval (MICAR) system (24,25) was introduced to automate coding multiple causes of death. In addition, MICAR provides more detailed information on the conditions reported on death certificates than is available through the ICD code structure. Then, beginning with data year 1993, SuperMICAR, an enhancement of the MICAR system, was introduced (26). SuperMICAR allows for literal entry of the multiple cause-of-death text as reported by the certifier. This information is then processed automatically by MICAR and ACME. Records that cannot be processed automatically by MICAR are manually coded for multiple cause and then further processed through ACME to determine underlying cause. In 2014, SuperMICAR was used to process all of the nation's death records.

In this report, tabulations of cause-of-death statistics are based solely on the underlying cause of death. The underlying cause is defined by WHO as “the disease or injury which initiated the train of morbid events leading directly to death, or the circumstances of the accident or violence that produced the fatal injury” (4). The underlying cause is selected from the conditions entered by the physician in the cause-of-death section of the death certificate. When more than one cause or condition is entered by the physician, the underlying cause is determined by the sequence of conditions on the certificate, provisions of ICD, and associated selection rules and modifications. Generally, more medical information is reported on death certificates than is directly reflected in the underlying cause of death. This information is captured in NCHS multiple cause-of-death statistics (27–29).

### Terrorism-related deaths

Starting in 2001, terrorism deaths are classified using a set of codes and guidelines developed by NCHS within the framework of ICD-10 (30,31). The codes developed include \*U01–\*U02 for terrorism involving an assault (homicide) and \*U03 for terrorism involving intentional self-harm (suicide). The asterisk (\*) preceding these codes indicates that the code was introduced by the United States but is not officially part of ICD. Codes from the “U” Chapter of ICD-10 were selected because this chapter was reserved specifically for “future additions and changes and for possible interim classifications to solve difficulties arising at the national and international levels between revisions” (4). To maintain international comparability in reporting homicide and suicide rates, deaths coded to \*U01–\*U02 are included in tabulations of leading causes of death with other homicides (\*U01–\*U02, X85–Y09, and Y87.1), and deaths coded to \*U03 are included with other suicides (\*U03, X60–X84, and Y87.0). In 2014, no deaths were assigned to terrorism categories.

## Coding and processing changes in 2014

Rules for coding a cause or causes of death may sometimes require modification when evidence suggests that such modifications will improve the quality of cause-of-death data. Prior to 1999, such modifications were made only when a new revision of ICD was implemented. A process for updating ICD was introduced with ICD-10 that allows for midrevision changes. These changes, however, may affect comparability of data between years for select causes of death. Minor changes may be implemented every year, whereas major changes may be implemented every 3 years.

No ICD-10 codes were added or deleted in data year 2014.

Quality of mortality data is largely dependent on proper and thorough completion of death certificates by certifiers. Accuracy and completeness of information entered on death certificates can vary by state year to year. Manner of Death information on the death certificate defines the circumstances under which the death occurred. The classification (natural, accident, suicide, homicide) selected when the death certificate is completed can affect the coding of underlying cause of death. In Tennessee, the number of certificates with a blank entry for manner of death increased from 137 in 2013 to 600 in 2014. Most of these records (560) were assigned to unintentional injuries. Some causes of death may have been significantly affected. For example, the number of deaths in Tennessee from Discharge from other and unspecified firearms, W34, increased from 18 in 2013 to 90 in 2014, and the number of deaths from Other accidental hanging and strangulation, W76, increased from 0 in 2013 to 26 in 2014. If manner of death had been specified, many of these deaths would have likely been assigned a more specific underlying cause-of-death code. This issue did not have an impact on the national cause-of-death rankings in this report. Nor does it seem to have had an impact on the cause-of-death rankings for Tennessee shown in leading-cause worktable nine (LCWK9), available from: [http://www.cdc.gov/nchs/nvss/mortality\\_tables.htm#icod](http://www.cdc.gov/nchs/nvss/mortality_tables.htm#icod).

## Age

Leading causes of death are presented by age categories in [Tables 1–4](#). Decedents for whom age was not stated are included in total categories showing the term “all ages” but are not distributed across age groups. No age information was missing for infants in 2014. The percentage of all decedents with age not stated in 2014 was 0.006% (3).

## Race and Hispanic origin

Race and Hispanic origin are reported separately on the death certificate. Therefore, data shown by race include persons of Hispanic or non-Hispanic origin, and data for Hispanic origin include persons of any race. In this report, unless otherwise specified, decedents of Hispanic origin are included in the totals for each race group—white, black, American Indian or Alaska Native (AIAN), and Asian or Pacific Islander (API)—according to the decedent’s race as reported on the death certificate. Data shown for Hispanic persons include all persons of Hispanic origin of any race.

The 2003 revision of the U.S. Standard Certificate of Death allows the reporting of more than one race (multiple races) (16). This change was implemented to reflect the increasing diversity of the U.S. population and is consistent with the decennial census. The race and ethnicity items on the revised certificate are compliant with the most recent standards issued by the Office of Management and Budget (OMB) in 1997, which mandate the collection of more than one race for federal data (32). In addition, the new certificate is compliant with the OMB-mandated minimum of five races to be reported for federal data. Multiple race includes any combination of white, black or African American, AIAN, and API. If two or more specific subgroups such as Korean and Chinese are reported, they count as a single race (Asian) rather than as multiple races.

In 2014, multiple race was reported on the revised death certificates of 46 states (listed above) and the District of Columbia; more than one race was reported for 0.4% of the records in these reporting areas. Data from 4 states (Alabama, Colorado, Maryland, and West Virginia) are based on the 1989 revision of the U.S. Standard Certificate of Death (17), which follows the older 1977 OMB standard of allowing only a single race to be reported (33). In addition, these states report a minimum of four races as stipulated by the 1977 standard: white, black or African American, AIAN, and API.

To provide uniformity and comparability of data during the transition to the new multiple-race format, it was necessary to bridge the responses of those who reported multiple races to a single race in a procedure similar to that used to bridge multiracial population estimates (34,35). Multiracial decedents are imputed to a single race (white, black, AIAN, or API) according to their combination of races, Hispanic origin, sex, and age indicated on the death certificate. The imputation procedure is described in detail at: [http://www.cdc.gov/nchs/data/dvs/Multiple\\_race\\_docu\\_5-10-04.pdf](http://www.cdc.gov/nchs/data/dvs/Multiple_race_docu_5-10-04.pdf).

Mortality data for the Hispanic-origin population are based on deaths of residents of all 50 states and the District of Columbia. Data year 1997 was the first year in which mortality data for the Hispanic population were available for the entire United States.

## Quality of race and Hispanic-origin data

Death counts and rates for Hispanic, AIAN, and API persons should be interpreted with caution because of misreporting of race on the death certificate. A number of studies (10–13) have been conducted on the reliability of race reported on the death certificate by comparing race on the death certificate with that reported on another data collection instrument, such as the census or a survey. Differences may arise because of differences in who provides race information on the compared records. Race information on the death certificate is reported by the funeral director as provided by an informant or, in the absence of an informant, on the basis of observation. In contrast, race on the census or on the Current Population Survey is obtained while the person is alive and is self-reported or reported by another household member familiar with the person; therefore, it may be considered more valid. A high level of agreement between the death certificate and the census or survey report is essential to ensure unbiased death rates by race.

Studies (10–13,36) have shown that a person self-reported as AIAN, API, or Hispanic origin on census or survey records was sometimes reported as another race or ethnicity on the death certificate. The net effect of misclassification is an underestimation of deaths and death rates for the AIAN and API groups and for Hispanic origin. Deaths for the AIAN population are underreported by 30%, the API population by 7%, and the Hispanic-origin population by 5% (13). In addition, undercoverage of some minority groups in the census and resultant population estimates introduces biases into death rates by race and Hispanic origin (10–13,36,37). Unlike the 1990 census, coverage error in the 2000 census was statistically significant only for the non-Hispanic white population (overcounted by an estimated 1.13%) and the non-Hispanic black population (undercounted by an estimated 1.84%) (37). The 2010 census coverage error was minor, with a net undercount of 0.01%. The net undercounts were statistically significant from zero for the following populations: non-Hispanic black (2.06%), non-Hispanic white (–0.83%), Hispanic (1.54%), and AIAN (4.88% on reservations and –1.95% off reservations) (38). For a more detailed discussion, see “Deaths: Final Data for 2014” (3).

Racial or ethnic misclassification should not have a major impact on cause-of-death rankings for the race and Hispanic-origin groups because there is no reason to expect that racial or ethnic misclassification varies by cause of death.

### Other races and race not stated

Beginning in 1992, all records coded as “Other races” (0.68% of total deaths in 2014) were assigned to the specified race of the previous record. Records for which race was unknown, not stated, or not classifiable (0.34%) were assigned the racial designation of the previous record.

### Infant mortality rates

For 2014, as in previous years, infant deaths continued to be tabulated by the race of the decedent. However, beginning with the 1989 data year, the method of tabulating live births by race was changed from race of parents to race of mother as stated on the birth certificate. This change affects infant mortality rates because live births are the denominators of these rates (18,39,40).

Quantitatively, the change to tabulating live births by race of mother results in more white births and fewer black births and births of other races. Consequently, infant and maternal mortality rates under the new tabulating procedure tend to be about 2% lower for white infants and about 5% higher for black infants than when they are computed by the previous method of tabulating live births by race of parents. Rates for most other minority races also are higher when computed by race of mother (18,39,40).

Infant mortality rates for the Hispanic-origin population are based on numbers of resident infant deaths reported to be of Hispanic origin and numbers of resident live births by Hispanic origin of mother for the United States. In computing infant mortality rates, deaths and live births of unknown origin are not distributed among the specified Hispanic and non-Hispanic

groups. The percentage of infant deaths of unknown origin was 1.1%, and the percentage of live births to mothers of unknown origin was 0.8% for the United States in 2014 (3,41).

Infant mortality rates for specified race and Hispanic origin are subject to error because of reporting problems that affect the classification of race and Hispanic origin on the birth and death certificates for the same infant. Infant mortality rates by specified race and Hispanic origin are more accurate when based on the linked file of infant deaths and live births (14). The linked file computes infant mortality rates using the race and Hispanic origin of the mother from the birth certificate in both the numerator and denominator. Race and Hispanic origin on the birth certificate are considered to be more accurate than on the death certificate because, on the birth certificate, race and Hispanic origin are generally reported by the mother at the time of delivery. In contrast, on the death certificate, race and Hispanic origin are reported by an informant—often the mother, but sometimes the funeral director. Estimates of reporting errors have been made by comparing rates based on the linked files with those in which the race of the infant decedent is based on information from the death certificate (10,14).

## Computation of rates and population bases

Rates in this report (except for infant mortality rates) are crude death rates presented per 100,000 estimated population in a specified group. Population estimates represent the population at risk of dying in a specified group. The populations used for computing death rates in this report are postcensal estimates for July 1, 2014, and were produced under a collaborative arrangement with the U.S. Census Bureau (42).

Reflecting the current standards for the classification of race and ethnicity issued in 1997 by OMB (32), U.S. Census 2010 allowed persons to report more than one race, as appropriate, for themselves and household members. In addition, the standards specified five minimum race categories to be used for tabulation: AIAN, Asian, black or African American, Native Hawaiian or Other Pacific Islander (NHOPI), and white. This is a modification of the previous 1977 OMB standards in which only four race categories were specified (Asian and Pacific Islander persons were treated as a single group) and respondents reported only one of the four (33). Death certificates from some reporting areas currently collect only one race for the decedent according to the 1977 OMB guidelines and are thus incompatible with population data based on the 2010 census for calculating death rates. In 2014, multiple-race information was reported on the revised death certificates of 46 states and the District of Columbia. A total of 4 states reported single-race information on unrevised death certificates.

To produce population estimates with race categories comparable with those still used on some death certificates, the enumerated population data with multiple-race categories were bridged back to single-race categories. In addition, the 2010 census counts were modified to be consistent with the older (1977) OMB racial categories (i.e., data for Asian and NHOPI persons were combined into the single category of API). The procedures used to produce the bridged populations are described in separate publications (34,35). It is anticipated that bridged population data will be used over the next few years

for computing population-based rates. Beginning with deaths occurring in 2003, an increasing number of states have collected multiple-race data on the death certificate. Once all states begin collecting data on race according to the 1997 OMB standards, the use of bridged populations is expected to be discontinued.

It is important to emphasize that the population data used to calculate the race-specific mortality statistics presented in this report are based on special estimation procedures and are not true counts. The estimation procedures used to develop these populations are subject to error. Smaller populations (e.g., AIAN) are likely to be affected much more than larger populations (34). Although the nature and magnitude of these errors are unknown, the potential for error should be kept in mind when evaluating trends and differentials. Over the next several years, additional information will be incorporated in the estimation procedures, resulting in more robust race-specific population estimates.

Population estimates by race, sex, and the age categories presented in this report are shown in [Table I](#). Population estimates by Hispanic origin, race for the non-Hispanic population, sex, and age are shown in [Table II](#).

Infant mortality rates are the most commonly used index for measuring the risk of dying during the first year of life. Infant mortality rates use the number of live births to approximate the population at risk of dying before the first birthday. They are calculated by dividing the number of infant deaths in a calendar year by the number of live births registered for the same period and are presented as rates per 100,000 live births. Neonatal and postneonatal mortality rates are also calculated using live births in the denominator. For final birth figures used in the denominator for infant mortality rates, see "Births: Final Data for 2014" (43).

## Random variation

The mortality data presented in this report are not subject to sampling error. However, mortality data, even based on complete counts, may be affected by random variation. When the number of events is small (perhaps fewer than 100 deaths) and the probability of such an event is small, caution must be observed when interpreting mortality data. This is less problematic when analyzing the relative ranking of causes of death because the observed frequency of deaths for any particular cause is fixed for any given group in any given year, and the ranking is based on that fixed value. Nevertheless, when comparing rankings based on small numbers of deaths between demographic groups or over time, it is important to be aware that differences in relative rankings may be attributable to random variability (see reference 3 for a more detailed discussion of random variation and formulas for calculating standard errors for death rates and infant mortality rates).

List of Detailed Tables ..... 16  
Technical Notes ..... 91

Acknowledgments

This report was prepared in the Division of Vital Statistics (DVS) under the general direction of Delton Atkinson, Director, DVS; Robert N. Anderson, Chief, Mortality Statistics Branch (MSB); and Elizabeth Arias, Team Leader, Statistical Analysis and Research Team (MSB). Sherry L. Murphy of MSB contributed to the Technical Notes. Sally Curtin of MSB provided content and table review. Registration Methods staff and staff of the Data Acquisition, Classification, and Evaluation Branch provided consultation to state vital statistics offices regarding collection of the death certificate data on which this report is based. This report was edited and produced by NCHS Office of Information Services, Information Design and Publishing Staff: Jane Sudol edited the report; typesetting was done by Kyung Park; and graphics were produced by Sarah Hinkle.
