# Changes in Home Births by Race and Hispanic Origin and State of Residence of Mother: United States, 2019-2020 and 2020-2021 

Elizabeth C.W. Gregory, M.P.H., Michelle J.K. Osterman, M.H.S, and Claudia P. Valenzuela, M.P.H.

## Abstract

Objectives-This report describes changes between 2020 and 2021 in the percentage of home births by month, race and Hispanic origin, and state of residence of the mother, and makes comparisons with changes occurring between 2019 and 2020.

Methods-Data are based on birth certificates filed in the 50 states and the District of Columbia (D.C.) and collected through the National Vital Statistics System. Changes in the percentage of home births in the United States from 2019 to 2020 and from 2020 to 2021 are compared by race and Hispanic origin, month, and state of residence of the mother.

Figure 1. Percentage of home births, by race and Hispanic origin of the mother: United States, 2019-2021

U.S. DEPARTMENT OF HEALTH AND HUMAN SERVICES

Results-The percentage of U.S. home births rose from $1.26 \%(45,646)$ in 2020 to $1.41 \%(51,642)$ in 2021, an increase of $12 \%$ and the highest level since at least 1990. Increases ranging from $10 \%$ to $21 \%$ were seen for the three largest race and Hispanic-origin groups. The percentage of home births for all women increased between 2020 and 2021 for most months, peaking in January 2021 at $1.51 \%$. Patterns by month differed somewhat by race and Hispanic origin, with more consistent monthly increases seen for non-Hispanic White women. Home births increased in 30 states (with nonsignificant increases for 11 additional states) and declined in 2 states (with nonsignificant declines for 7 additional states and D.C.). The $12 \%$ increase in home births from 2020 to 2021 follows a $22 \%$ increase from 2019 to 2020, with increases by maternal race and Hispanic origin ranging from $21 \%$ to $36 \%$. Home births increased for 40 states, with nonsignificant increases seen for 9 additional states and D.C. from 2019 to 2020.

Keywords: home births • race and Hispanic origin • state of residence - National Vital Statistics System

## Introduction

Home births in the United States made up approximately $1 \%$ of all births from 1990 ( $0.67 \%$ ) to 2019 ( $1.03 \%$ ) (comparable data are not available for home births before the 1989 revision of the U.S. Standard Certificate of Live Birth) (1). With the start of the COVID-19 pandemic in early 2020 and concerns about giving birth in a hospital, interest in home births increased among pregnant women in the United States (2-4). A previous report found that home births increased by $22 \%$ from 2019 to 2020 , from $1.03 \%$ to $1.26 \%$, reaching the highest level since at least 1990 (1). During this time, the percentage of home births rose for each month in March-December, corresponding with the initial surge of COVID-19 cases in the United States in late March and early April 2020 (1). Similar patterns were seen for the three largest race and Hispanic-origin groups (1). This report continues to explore these changes in home births through 2021 as the COVID-19 pandemic continued. Changes in home births by maternal race and Hispanic origin, month, and state of residence from 2020 to 2021 are described and compared with changes occurring from 2019 to 2020.

## Methods

Birth certificate data shown in this report were collected through the National Vital Statistics System and are based on 100\% of births registered in the United States for 2019 to 2021.

The 2003 revision of the U.S. Standard Certificate of Live Birth includes a checkbox item for the place of birth with five options: hospital, freestanding birth center, home birth, clinic/ doctor's office, and other ( 5,6 ). If the item is not completed, it is classified as "Not stated" ( $0.004 \%$ of all records in 2021). Levels of "Not stated" ranged from $0.002 \%$ to $0.008 \%$ by race and Hispanic origin and $0 \%$ to $0.122 \%$ by state of residence for 2021. Home birth is defined as a birth occurring at a private
residence (7). In this report, home births include both planned and unplanned home births.

Hispanic origin and race are reported separately on the birth certificate. Data shown by Hispanic origin include all people of Hispanic origin of any race. Data for non-Hispanic people are shown separately for each single-race group. Data by race are based on the revised standards issued by the Office of Management and Budget in 1997 (8). The race and Hispanicorigin groups shown are non-Hispanic, single-race White; non-Hispanic, single-race Black; and Hispanic. For brevity, text references to "non-Hispanic White" or "non-Hispanic Black" women omit the term "single-race."

Relative change is presented in the text and tables. Changes and differences presented in this report are statistically significant at the 0.05 level based on a two-tailed $z$ test, unless noted otherwise (9).

## Results

## Changes in the number and percentage of home births

- In 2021, 51,642 home births occurred, an increase of $13 \%$ from 2020 ( 45,646 ). This increase followed a $19 \%$ rise in the number of home births from $2019(38,506)$ to 2020 (Table 1).
- The percentage of home births among all women increased from $1.26 \%$ in 2020 to $1.41 \%$ in 2021 (a 12\% increase), the highest level since at least 1990 (Figure 1). From 2019 to 2020 , the percentage of home births increased by $22 \%$, from $1.03 \%$ to $1.26 \%$.

## Changes in the percentage of home births by race and Hispanic origin

- For non-Hispanic White women, the percentage of home births increased $10 \%$, from $1.87 \%$ in 2020 to $2.06 \%$ in 2021. This followed a $21 \%$ increase from 2019 (1.55\%) to 2020 (Table 1 and Figure 1).
- For non-Hispanic Black women, home births increased $21 \%$, from $0.68 \%$ in 2020 to $0.82 \%$ in 2021. The percentage of home births increased 36\% from 2019 (0.50\%) to 2020.
- For Hispanic women, home births increased from $0.48 \%$ in 2020 to $0.55 \%$ in 2021, an increase of $15 \%$. The percentage of home births increased 30\% from 2019 (0.37\%) to 2020.

## Changes in the percentage of home births by month and by race and Hispanic origin

## All women

- From 2020 to 2021, the percentage of home births for all women increased by $28 \%$ to $47 \%$ for January through March, and by 7\% in April; the percentage of home births
was highest in January 2021, at 1.51\% (up from 1.03\% in January 2020). Home births then declined 5\% in May 2021 (from 1.49\% to 1.42\%). Levels increased, but not significantly, for June and July, and then rose by 7\% to 9\% for August through December (Table 1 and Figure 2).
- In comparison, from 2019 to 2020, home birth levels were stable in January and February. Levels then rose each month for the remainder of the year, with increases ranging from $5 \%$ to $45 \%$.

## Non-Hispanic White women

- From 2020 to 2021, the percentage of home births for non-Hispanic White women increased by $24 \%$ to $41 \%$ for January through March, and by 6\% in April. The percentage was highest in January, at 2.21\% (up from 1.57\%). Home births then declined 6\% in May (from 2.18\% to 2.05\%). The percentage of home births increased for June and July, but not significantly, and then rose by $5 \%$ to $12 \%$ for August through December (Table 1).
- In comparison, from 2019 to 2020, no significant changes were seen in the percentage of home births to non-Hispanic White women for January through March. Home births then rose for all months in April through December, with increases ranging from $21 \%$ to $42 \%$.

## Non-Hispanic Black women

- From 2020 to 2021, the percentage of home births for non-Hispanic Black women increased by $51 \%$ to $62 \%$ for January through March, and by $21 \%$ in April. The percentage was highest in February, at 0.90\% (up from 0.57\%). The percentage increased, but not significantly, for May and June, then rose by 16\% to 20\% for July through September. Increases for October and November, and the decline in December, were not significant (Table 1).
- In comparison, for non-Hispanic Black women, the percentage of home births increased from 2019 to 2020, although not significantly, for January through March. The percentage then rose every month for April through December, with increases ranging from $20 \%$ to $63 \%$.

## Hispanic women

- From 2020 to 2021, the percentage of home births for Hispanic women increased for January through March, with increases from $24 \%$ to $69 \%$. The percentage was highest in January, at 0.61\% (up from 0.36\%). Home births increased in April and declined in May, although these changes were not significant, and then rose in June (17\%) and July (19\%). Increases for August through October and declines for November and December were not significant (Table 1).
- In comparison, for 2019-2020, the percentage of home births to Hispanic women was not significantly different for January and February. Home births then increased in all months from March through December, with increases ranging from $25 \%$ to $67 \%$.

## Changes in the percentage of home births by state of residence

- From 2020 to 2021, the percentage of home births increased in 30 states. Increases ranged from 8\% in Florida to $49 \%$ in West Virginia (Table 2 and Figure 3). Increases in 11 other states were not significant. The percentage of home births declined in 2 states, by $17 \%$ in Connecticut and 5\% in New York; nonsignificant declines were seen in 7 additional states and the District of Columbia (D.C.).
- In comparison, the percentage of home births increased in 40 states for 2019-2020, with increases ranging from $11 \%$ to $68 \%$. Nonsignificant increases were seen in 9 additional states and D.C.

## Summary

Following average annual increases of $2 \%$ from 1990 $(0.67 \%)$ to $2019(1.03 \%)$, the percentage of home births rose $22 \%$ from 2019 to $2020(1.26 \%)$, and another $12 \%$ from 2020 to $2021(1.41 \%)$. The 2021 level was the highest since at least 1990, demonstrating a higher rate of increase in home births during the first 2 years of the COVID-19 pandemic. From 2020 to 2021, levels increased by $10 \%$ to $21 \%$ for each of the race and Hispanic-origin groups. For all women and non-Hispanic White women, increases occurred generally for most months of the year, although not all increases were significant. Although less pronounced and consistent, increases also were seen in home births for most months for non-Hispanic Black and Hispanic women. Between 2020 and 2021, home births increased in 41 states (changes in 11 states were not significant) and declined in 9 states and D.C. (changes in 7 states and D.C. were not significant).

$\dagger$ Significant change ( $p<0.05$ ).

- Quantity zero.
${ }^{1}$ Excludes births where place of birth is not stated.
${ }^{2}$ Includes births to race and origin groups not shown separately, such as Hispanic, single-race White; Hispanic, single-race Black; and non-Hispanic, multiple-race women, and births with origin not stated
${ }^{3}$ Race and Hispanic origin are reported separately on birth certificates; people of Hispanic origin may be of any race. In this table, non-Hispanic women are classified by race. Race categories are consistent with the 1997 Office of Management and Budget standards; see reference 8 in this report. Single race is defined as only one race reported on the birth certificate.
${ }^{4}$ Includes all people of Hispanic origin of any race.
