# HEALTH STATISTICS

FROM THE U. S. NATIONAL HEALTH SURVEY

## Proportion of Hospital Bill Paid by Insurance

patients discharged from  
short-stay hospitals

United States

July 1958 - June 1960

Statistics for short-stay hospitals on the proportion of the hospital bill that was paid for by a hospital insurance plan, selected characteristics of the patients, length of stay, and hospital ownership. Based on data collected in household interviews during July 1958-June 1960.

The U. S. National Health Survey is a continuing program under which the Public Health Service makes studies to determine the extent of illness and disability in the population of the United States and to gather related information. It is authorized by Public Law 652, 84th Congress.

### CO-OPERATION OF THE BUREAU OF THE CENSUS

Under the legislation establishing the National Health Survey, the Public Health Service is authorized to use, insofar as possible, the services or facilities of other Federal, State, or private agencies:

In accordance with specifications established by the National Health Survey, the Bureau of the Census, under a contractual arrangement, participates in most aspects of survey planning, selects the sample, collects the data, and carries out certain parts of the statistical processing.

# PROPORTION OF HOSPITAL BILL PAID BY INSURANCE

## INTRODUCTION

The data in this report, based on health interviews conducted during the period July 1958-June 1960 in the National Health Survey, refer to persons discharged from short-stay hospitals who reported the proportion of their hospital bill that was paid for by some insurance plan.

The National Health Survey published in December 1960 a report entitled "Interim Report on Health Insurance," Health Statistics, Series B, No. 26. In it were presented estimates of the number of persons in the population who had hospital insurance, surgical insurance, and doctor visit insurance of any kind. The data in that report were based on interviews conducted during the period July-December 1959.

The earlier report dealt with the estimated numbers of persons who had hospital insurance coverage of any kind. This report presents statistics on the number of hospitalized persons who, in fact, had all or some portion of their hospital bill paid for by insurance.

These two types of data present two different aspects of the general topic of health insurance. For various reasons the estimates can be expected to differ. One reason why these statistics and those in the earlier report are likely to differ is that persons with insurance coverage have a higher rate of hospital utilization than persons without insurance coverage. On page 10 of the earlier report a table based on survey data shows that 10.2 percent of the persons who reported they had hospital insurance coverage were admitted to short-stay hospitals at least once during the year, while only 7.7 percent of those without coverage were admitted during the year. Thus it appears that persons with hospital insurance coverage utilize hospitals at a rate that is about 33 percent higher than for those without coverage. On the basis of these data it might be expected that the propor-

tion of persons discharged from short-stay hospitals who had some insurance payment for the hospital bill would be much higher than the proportion of persons in the population with insurance coverage. However, it will be seen that this higher rate for the hospitalized population does not occur, according to the estimates presented in this report. For example, the over-all rate of hospital insurance coverage in the earlier report was 67 per 100 persons in the general population, and the present reports shows that there was some portion of the hospital bill paid by insurance for about 68 out of each 100 hospital discharges.

A likely reason that this expected higher rate for the hospitalized population does not occur is a factor which operates to reduce the proportion of discharges for which a part of the cost was paid by insurance: persons who have some hospital insurance coverage may be hospitalized for a condition or under certain circumstances for which the insurance policy does not provide payment. A few examples will illustrate this point. Some hospital insurance policies exclude entirely coverage for deliveries or provide coverage for deliveries only after the policy has been in effect for a stipulated period of time.

Thus, if the proportion of females in the population ages 15-24 who were said to have hospital insurance coverage (63 percent in the earlier report) is compared with hospitalized females in the same age group who indicated that some part of the bill was paid for by insurance (52 percent in the present report), there is a significant difference. However, when deliveries are excluded, the proportion of discharges for which some or all of the hospital bill was paid by insurance is 60 percent, an estimate which is not too different from that given for hospital insurance coverage (table A).

Some other instances in which a person with hospital insurance may not be covered for a specific episode of hospitalization are as follows: A veteran may be covered by a hospital insurance policy which provides protection for himself and his family, but under certain conditions he may

<sup>1</sup>U. S. National Health Survey. *Interim Report on Health Insurance, United States, July-December 1959*. Health Statistics. Series B-26. PHS Publication No. 584-B26. Public Health Service. Washington, D. C. December 1960. p. 21.

elect to be hospitalized under the auspices of the Veterans Administration. Since most hospital insurance policies will not pay for services rendered by Veterans or other Federal hospitals, such a case would appear in this report as having no part of the bill paid by insurance. A person with hospital insurance may be hospitalized for injuries or conditions that are due to the negligence of some other person. The hospital bill for such a person may be paid by the negligent party or paid by an insurance company under the terms of a liability policy held by the negligent party. Under these circumstances, for this report the hospital bill would not be considered as paid for by insurance. The extent to which persons with hospital insurance coverage have "limited" policies or are hospitalized under some of the special circumstances described above cannot be determined from Survey data.

In the text and tables that follow there are a few comparisons of the data from the two reports. Readers who make additional comparisons should bear in mind the conceptual differences noted above.

## SOURCE AND QUALIFICATIONS OF THE DATA

The data in this report are based on information obtained from household interviews during the period July 1958-June 1960. Using a continuous probability sample of the civilian non-

institutional population of the United States, interviews were conducted in approximately 75,000 households, comprising 245,000 persons, during the 2-year period.

A description of the statistical design of the survey, the methods used in estimation, and general qualifications of the data obtained from surveys is found in Appendix I. Since all estimates presented in this report are based on a sample of the population rather than the entire population, they are subject to sampling error. Therefore, particular attention should be paid to the section entitled "Reliability of Estimates" which includes a table of sampling errors and instructions for its use.

Definitions of certain terms used in this report are given in Appendix II. Since many of these terms have specialized meanings for the purposes of this survey, familiarity with these definitions will assist the reader in interpreting the data.

The questionnaire which was used to collect the data on which this report is based is reproduced as Appendix III. Only a small part of the information obtained by means of the questionnaire is included in this report. Other reports in this series give data on other topics covered by the questionnaire. However, the entire document is included so that the reader can understand the context in which the data for this report were gathered.

A general limitation to all data obtained by household interviews is that the data are no better than the respondent's knowledge of and ability

to recall the correct answers to specific questions. Although respondents were asked to report the hospitalization experience of all members of the household for the 12 months prior to the interview week, in order to reduce the bias due to faulty memory, only those discharges which occurred during the 6-month period prior to the interview were used as a basis for the estimates in this report. The procedure by which these data were adjusted to represent annual estimates is described in more detail in Appendix I.

The data in this report are based on responses to the basic question "Was any of the hospital bill paid for by any kind of insurance?" Respondents reported that they did not know the answer to this question for only 1.5 percent of the total hospital discharges. To compute the percentages shown in this report only those discharges for which a "yes" or "no" answer was obtained to the basic question were included. This procedure in effect distributed the discharges for which no information was obtained in the same manner as the discharges for which information was obtained.

For 2.2 percent of the total discharges respondents knew that some portion of the bill had been paid for by insurance but they did not know how much. These "unknowns" were prorated among the discharges for which a definite fraction of the bill was reported as having been paid by insurance.

The survey design did not include procedures for checking records to ascertain whether respondents reported accurately the fact of insurance or the fraction of the bill paid by insurance. However, when all the relevant factors are considered, the proportion of persons who reported some insurance payment for the hospital bill is not inconsistent with estimates based on hospital insurance coverage in the general population.

For approximately 32 percent of the hospital discharges it was reported that there was not any insurance payment for the hospital bill. It should be noted that this does not mean that for almost one third of the hospital discharges these individuals had to pay for the entire hospital bill out of their own or their family's funds. Sources other than insurance are used to help finance the cost of hospital care. In addition to the hospital care provided for veterans by the Veterans Administration, which was mentioned earlier, the Federal government provides care for other groups such as dependents of members of the Armed Forces, merchant seamen, and American Indians. State and local governments, health agencies, and charitable organizations spend large sums to help finance

the cost of hospital services. And, finally, friends, neighbors, relatives, and employers on many occasions help to share the burden of a large hospital bill.

It is also necessary to emphasize that there are some factors in the survey method which tend to produce substantial differences in the estimates of the number of hospital discharges as contrasted with statistics based on hospital records. Of particular importance is the fact that the survey data refer only to persons who were alive at the time of interview. Thus, the hospital experience of persons who died during the reference period is not counted. Also excluded from the data is the short-stay hospital experience during the period of reference of persons who became inmates of institutions prior to the time of household interview. For the older age groups the differences between survey data and record data due to these factors are quite high. Another factor that undoubtedly reduced the volume of discharges in comparison with hospital records is that the survey excludes an unknown number of inpatients who were not hospitalized overnight. This omission probably has a negligible effect upon the estimates of hospital days since each instance contributes only one day to the sample total. Furthermore, although direct transfers from one hospital to another are usually considered as a discharge and an admission in hospital records, survey respondents may regard such a continuous period of hospitalization as a single episode and, therefore, erroneously report the event as having occurred in a single hospital. The effect of this particular error on the statistics is not known but is believed to be small.

While these factors would tend to reduce the estimates of the number of hospital discharges, it is believed that they would not materially affect estimates of the proportion of discharges for which some fraction of the hospital bill was paid by insurance.

## PROPORTION OF HOSPITAL BILL PAID BY INSURANCE

An examination of the detailed tables shows in general, that hospitalized population groups which have a low percentage of discharges for which there was some insurance contribution toward paying the bill also have smaller portions of the hospital bill paid by insurance.

This point is illustrated in table B for sex and age groups. For males 65 years of age or older insurance payments for some part of the hospital bill were reported for only 53 percent of the total discharges and of those with insurance

Table B. Percent of persons discharged from short-stay hospitals who had any insurance payment for the hospital bill; percent who had 3/4 or more of their bill paid by insurance; and percent of those with any insurance payment who had 3/4 or more of the bill paid by insurance by sex and age: United States, July 1958-June 1960

Sex and age	Total discharges		Percent of discharges with any insurance payment who had 3/4 or more of the bill paid by insurance
	Percent with any insurance payment for the bill	Percent with 3/4 or more of bill paid by insurance	
<u>Both sexes</u>			
All ages-----	68.0	51.3	75.4
Under 15-----	72.1	58.3	80.9
15-44-----	66.9	50.6	75.6
45-64-----	76.0	58.0	76.3
65+-----	51.2	30.3	59.2
<u>Male</u>			
All ages-----	70.6	55.7	78.9
Under 15-----	70.7	57.0	80.6
15-44-----	74.7	62.2	83.3
45-64-----	75.5	59.1	78.3
65+-----	53.1	33.4	62.9
<u>Female</u>			
All ages-----	66.4	48.7	73.3
Under 15-----	73.9	59.9	81.1
15-44-----	64.5	47.1	73.0
45-64-----	76.4	56.9	74.5
65+-----	49.3	27.3	55.4

63 percent reported that 3/4 or more of the bill was paid for by insurance. On the other hand, for males under 65 years of age, the percent of total discharges with any insurance payment for the bill ranges from 71 percent to 76 percent, and among those who had any insurance about 80 percent reported that 3/4 or more of the bill was paid by insurance.

A similar pattern is evident for females in table B. Moreover, the detailed tables show this same pattern for other population groups that have a low percentage of discharges for which there was some insurance payment for the bill, for example, persons who live in farm areas (tables 7-9) and persons with low family incomes (tables 16-18).

Table 1 shows that among the total discharged patients 68 percent had some portion of the bill paid by insurance, 51 percent reported that 3/4 or more of the bill was paid, about 11 percent reported 1/2-3/4 coverage of the bill, and 5 percent reported that less than 1/2 of the bill was paid for by insurance. It is well to note here that the heading "Under 1/2" that appears in the detailed tables does not include cases for which no part of bill was paid by insurance. The heading refers to cases for which some insurance payment was made, but such payment amounted to less than 1/2 of the total hospital bill.

The proportion of the bill covered for male hospital discharges and for female hospital dis-

charges, including and excluding deliveries, is shown in table C. When deliveries are included females have a smaller percentage of discharges with more than 3/4 of the bill paid by insurance than males. However, when deliveries are excluded, the percentages in each of the "fraction of the bill paid" categories, are similar for males and females.

Table C. Percent of discharges from short-stay hospitals by sex and fraction of bill paid by insurance: United States, July 1958-June 1960

Fraction of bill paid by insurance	Males	Females	Females (excluding deliveries)
Any part-----	70.6	66.4	70.8
Under 1/2-----	4.1	6.1	4.9
1/2-3/4-----	10.7	11.7	11.7
3/4 or more----	55.7	48.7	54.1

### PERCENT OF DISCHARGES WITH SOME INSURANCE PAYMENT OF THE HOSPITAL BILL

#### Age and Sex

The discussion that follows deals chiefly with the percentage of hospital discharges that had any part of the hospital bill paid by insurance rather than the proportion of the insurance payment.

Detailed tables 1-6 show the rate of "insurance payment" (percent of discharges with any part of bill paid by insurance), and the fraction of the bill paid by sex and age, for total discharges, for hospital days, and length-of-hospital-stay intervals. As indicated in tables 1, 2, and D and figure 1, the age-specific rates for both males and females are at about the same level (the differences are within the limits of sampling error) except for the childbearing ages. When deliveries are excluded (table 2) the rates for ages 15-44 for both males and females are also at about the same level.

From the "insurance payment" rates for the detailed age groups shown in table 1, it is apparent that up to age 65 for each of the sexes, the rates range from 70 percent to almost 80 percent with the exception of the age group 15-24.

Table D. Percent of hospital discharges with some insurance payment for the hospital bill by sex and age: based on discharges from short-stay hospitals, United States, July 1958-June 1960

Age	Males	Females	Females (excluding deliveries)
All ages-	70.6	66.4	70.8
Under 15-----	70.7	73.9	73.9
15-44-----	74.7	64.5	72.1
45-64-----	75.5	76.4	76.5
65+-----	53.1	49.3	49.3

Figure 1. Percent of hospital discharges with some insurance payment for the hospital bill by sex and age.

This age group has a rate of 66 percent for males and 52 percent for females. When deliveries are excluded the rate for this age group for females rises to 60 percent. There is some implication in this that when boys and girls reach the age of 18, the age at which many family-type policies cease to provide protection

Table E. Percent of hospital days for discharges with some insurance payment for the hospital bill by sex and age: based on discharges from short-stay hospitals, United States, June 1958-July 1960

Age	Both sexes	Male	Female
	Percent		
All ages-----	63.3	59.8	66.3
Under 15-----	61.7	61.1	62.4
15-44-----	64.7	62.6	66.0
45-64-----	72.3	65.1	79.3
65+-----	47.8	48.1	47.5

for dependent children, they do not obtain hospital insurance for a period of time.

After 65 years of age the rates begin to drop sharply for both males and females, from a rate of about 63 percent for both males and females at ages 65-69, down to 39 percent for males and 36 percent for females at 75 years of age and over.

When the number of hospital days involved in hospital discharges is considered (tables 3 and E), the data show that for males the proportion of days covered by insurance is about 60 percent compared with an "insurance payment" rate of about 71 percent for discharged cases. For females the proportion of days covered (66.3 percent) is about the same as the proportion of discharges with "insurance payment" (66.4 percent). Thus, although males have a higher "insurance payment" rate than females

in terms of discharges (71 percent to 66 percent), females have a higher rate in terms of the number of hospital days involved in these discharges (66 percent to 60 percent). The reason for this becomes apparent when the average length of stay is compared for male and female hospital discharges with and without some "insurance payment" for the bill (table F). For females there is no difference in average length of stay for discharges with or without "insurance payment." However, for males the length of stay for discharges with no "insurance payment" is 60 percent greater than the average stay for the cases with some "insurance payment."

#### Length-of-Stay Interval

Another aspect of the relationship of the length of stay in the hospital to the rate of "insurance payment" is shown in tables 4-6. The length-of-stay interval that has the highest rate varies from one age-sex group to another. However, the lowest rate regardless of sex, for ages under 65, is for discharges which involve 31 or more days of stay in a hospital. For persons 65 years and over, the lowest rate is for the 1-day cases for both males and females. It should be noted, that the size of the base estimate (90,000 cases for both sexes) for 1-day stays of older persons is quite small, and subject to high sampling error. Perhaps it is more important to note that for persons 65 and older, the rate of "insurance payment" is lower than that of younger persons, regardless of sex or length-of-stay interval.

#### Urban-Rural Residence

The proportions of discharges for which some fraction of the bill was paid for by insurance by

Table F. Percent distribution of discharges and average length of hospital stay for discharges with and without insurance payment for the bill by sex: based on discharges from short-stay hospitals, United States, July 1958-June 1960

Discharges	Percent distribution		Average length of stay in days	
	Male	Female	Male	Female
All discharges-----	100.0	100.0	10.5	7.2
With some insurance payment for the bill-----	70.6	66.4	8.9	7.2
Without any insurance payment for the bill-----	29.4	33.6	14.3	7.2

sex, age, and urban-rural residence groups are given in tables 7-9.

The over-all "insurance payment" rates, as well as those for each of the sexes, are about the same for urban and rural-nonfarm areas. For all persons the rate in both these areas is about 69 percent; for males the rate is about 72 percent; and for females, 68 percent. However, in rural-farm areas there is a sharp drop to about 55 percent for all persons, 59 percent for males, and 51 percent for females (fig. 2). When specific age-sex groups are examined there is some indication that the rates for persons under 45 years of age are slightly higher in the rural-nonfarm areas than in the urban areas, particularly for females. For ages over 45 there is more substantial evidence that the rates in rural-nonfarm areas are lower than the rates in urban areas for both males and females. The "insurance payment" rate in rural-farm areas is the lowest in all age-sex groups; and the rates for females are a little lower than the rates for males.

#### Geographic Region

The proportion of discharges for which some part of the bill was paid by insurance was highest in the Northeast and North Central regions (about 74 percent), while the proportion in the South was 64 percent and in the West, only 56 percent. This pattern was also true for each of the sexes, and with a few exceptions for each of the age-sex groups shown (tables 10-12).

For two of the regions, the South and the West, the "insurance payment" rates for hospitalized patients were at some variance with the

Figure 2. Percent of hospital discharges with some insurance payment for the hospital bill by sex and residence

rates on hospital insurance coverage in the general population shown in the report from the National Health Survey cited earlier (table G).

There are no survey data available at the present time which can account for the difference for the West region.

In the South, however, it is believed that the higher "insurance payment" rate among the

Table G. Percent of persons with hospital insurance coverage, and percent of hospital discharges with some portion of bill paid by insurance by geographic regions: percentages for hospitalizations based on discharges from short-stay hospitals, United States, July 1958-June 1960

Region	Percent of persons with hospital insurance coverage <sup>1</sup>	Percent of hospital discharges for which some portion of bill was paid by insurance
All regions-----	67.1	68.0
Northeast-----	75.2	73.4
North Central-----	73.9	73.6
South-----	56.1	64.1
West-----	61.6	56.1

<sup>1</sup>U. S. National Health Survey. Interim Report on Health Insurance, United States, July-December 1959. Health Statistics. Series B-26. PHS Publication No. 584-B26. Public Health Service. Washington, D. C. December 1960. p. 21.

hospitalized population may to a large extent be due to differences in insurance coverage and hospital utilization rates between the white and nonwhite populations. Among the hospitalized group the rate was about 71 percent for the white population and about 42 percent for the nonwhite (table 13). Based on interviews conducted during the period July 1957-June 1958, the National Health Survey reported an annual rate of hospital discharges of 103.3 per 1,000 white persons in the population and a rate of 68.2 per 1,000 nonwhite persons in the United States.<sup>1</sup> More recent hospitalization rates for the white and nonwhite population in the South were not available when this report was being prepared. However, there is no reason to believe that the differential in the South would be less than that for the United States as a whole. In the other three regions the proportion of nonwhite persons ranges from 3-7 percent, while in the South nonwhite persons constitute about 30 percent of the population. Hence, racial differences in hospital utilization rates would have little effect on the other three regions. Thus, the higher "insurance payment" rate among the hospitalized persons in the South, compared with hospital insurance coverage among the general population in the South appears to be due to the fact that relatively speaking hospitalizations occur more frequently among the white population for whom the rate of hospital insurance coverage is substantially greater.

#### Race

Hospital insurance payment rates of white and nonwhite hospital patients are given in tables 13-15. These tables and figure 3 clearly indicate that there is a wide difference in the "insurance payment" rates of white and nonwhite hospitalized persons. Even though the volume of the estimated discharges for the nonwhite persons in each of the age-sex groups is small, and subject to high sampling errors, it is nevertheless quite apparent that regardless of age or sex, nonwhite persons have less of their hospitalization paid for by insurance than white persons.

#### Income

The fraction of the hospital bill paid by insurance by family income is shown in detailed tables 16-18 and is summarized in text table H. As may be seen in table H, for both males and

Figure 3. Percent of hospital discharges with some insurance payment for the hospital bill by age and race.

females, the higher the family income, the larger the proportion of discharges that had some part of the hospital bill paid for by insurance. The "insurance payment" rate for males ranged from 41 percent in the under \$2,000 income group to 83 percent for the \$7,000 and over group; for females the range was from 39 percent in the lowest income group to 80 percent in the highest income group. There was little difference in the rates for the two highest income groups shown. However, the differences between the first and the second and between the second and the third income groups were substantial.

The pattern described above for all ages is generally true for each of the age-sex groups with one notable exception. For both males and females over 65, there is a sharp drop in the rates for the \$7,000 and over income group. Although the number of discharges on which this proportion is based is small and subject to a large sampling error, the difference is great enough to suggest that this break in the pattern of higher "insurance payment" rates with higher income may be real. This change also is different from the pattern shown in the report on health insurance coverage cited earlier. In that report a dropoff in coverage is not evident. Since the statistics on insurance coverage also indicate that older people with coverage use considerably more hospitalization than those with-

All ages-----	66.4	38.6	57.1	77.5	79.5	56.1
Under 15-----	73.9	35.5	63.3	83.2	77.0	75.5
15-44-----	64.5	29.3	52.0	75.9	79.8	47.4
45-64-----	76.4	53.4	73.7	83.2	90.7	71.0
65+-----	49.3	45.8	56.8	61.0	42.5	40.1

out, this finding for those in the higher income group is puzzling.

In most of the tables of this report, persons 65 years of age or older show a smaller proportion of discharges with some insurance payment than younger persons with the same social or economic characteristic. An exception to this pattern is indicated in the rates for the two lowest income groups. For the \$2,000-3,999 income group, persons 65 years and over have about the same rate as persons under 45 years of age and for the lowest income group persons 65 and over have a higher rate than persons under 45.

#### Major Activity

The sex, age, and major activity of hospitalized persons according to the proportion of discharges for which some fraction of the

hospital bill was paid for by insurance are shown in tables 19-21.

Among males, "usually working" persons have a higher "insurance payment" rate than the other major activity groups in all of the age groups. Another exception to the general pattern of lower rates for persons over 65 may be noted here. "Usually working" males 65 and over have about the same proportion of discharges with some insurance payment of the hospital bill as "usually working" males in the 17-44 and 45-64 age groups.

As is the case for males, "usually working" females show a higher rate than females in the other major activity categories. "Usually working" females 45 years or older have a higher rate than those 17-44 years of age. No doubt this is due to the low "insurance payment" rate for deliveries mentioned earlier.

In summary, "usually working" persons have about the same "insurance payment" rate (79 per-

cent), regardless of age or sex and they have a higher rate than persons in the other major activity groups.

### Surgical Operations

According to the data shown in tables 22-24 for persons over 45 years of age, the fact of whether or not an operation was performed makes little difference in the proportion of discharges that had some insurance payment for the hospital bill. For both boys and girls under 15, those who had an operation performed during the hospital stay had a higher rate than those who were not surgically treated. This was also true, to a lesser degree, for males 15-44. However, for females in the childbearing ages, 15-44 years, there was a higher rate among those who did not have an operation. This is probably due to the lower insurance payment rate for deliveries, which are defined as operations by the survey (table A).

### Hospital Ownership

Persons discharged from nonprofit and proprietary hospitals have a higher rate of insurance payment for their hospital bills (74 percent and 70 percent), than persons hospitalized in Governmental-non-Federal hospitals (56 percent). As might be expected there is very little insurance payment of the bills for patients in Federal hospitals (6 percent).

The detailed distributions of the proportion of discharges with some insurance payment for hospital bills by sex, age, and type of hospital ownership are given in tables 25-27.

### Veterans Status

Since about 36 percent of the males over 15 years of age in the United States are veterans, they constitute an important segment of the population numerically as well as historically. Many veterans are eligible for hospital care under the auspices of the Veterans Administration. It is, therefore, of some interest to examine the insurance payment status of hospitalized veterans. Table I shows the percent distribution of males 25 years of age or over discharged from short-stay hospitals who had insurance coverage according

Table I. Percent of males, 25 years and older, discharged from short-stay hospitals with some insurance payment for the hospital bill by age, veterans status, and type of hospital: United States, July 1958-June 1960

Age, veteran status, and type of hospital	Percent of discharges with some insurance payment for hospital bill
<u>Ages 25-64</u>	
All males-----	76.9
Nonveterans-----	82.0
Veterans-----	70.4
Discharged from Federal hospitals-	5.5
Discharged from non-Federal hospitals-----	79.8
<u>Ages 65+</u>	
All males-----	53.1
Nonveterans-----	56.9
Veterans-----	39.1
Discharged from Federal hospitals-	2.7
Discharged from non-Federal hospitals-----	58.6

to veteran status and whether or not the veterans were hospitalized in Federal hospitals. It will be seen that the proportion of discharges for which there was some insurance payment for the hospital bill is about the same for non-veterans and veterans discharged from non-Federal hospitals for each of the two age groups shown. As was indicated earlier, insurance payments for the hospital bills for veterans hospitalized in Federal hospitals occurred in only a small proportion of the discharges.

## DETAILED TABLES

Page

### DISCHARGES, HOSPITAL DAYS, AND AVERAGE LENGTH OF STAY

Table 1. Average annual number of hospital discharges and percent distribution by fraction of hospital bill paid for by insurance according to sex and age: discharges from short-stay hospitals, United States, July 1958-June 1960-----	14
2. Average annual number of hospital discharges, excluding deliveries, and percent distribution by fraction of hospital bill paid for by insurance according to sex and age: discharges from short-stay hospitals, United States, July 1958-June 1960-----	15
3. Average annual number of hospital days and percent distribution by fraction of the bill paid for by insurance according to sex and age: discharges from short-stay hospitals, United States, July 1958-June 1960-----	16
4. Average annual number of hospital discharges and percent distribution by fraction of hospital bill paid for by insurance, for both sexes, according to age and length of hospital stay: discharges from short-stay hospitals, United States, July 1958-June 1960-----	17
5. Average annual number of hospital discharges and percent distribution by fraction of hospital bill paid for by insurance, for males, according to age and length of hospital stay: discharges from short-stay hospitals, United States, July 1958-June 1960-----	18
6. Average annual number of hospital discharges and percent distribution by fraction of hospital bill paid for by insurance, for females, according to age and length of hospital stay: discharges from short-stay hospitals, United States, July 1958-June 1960-----	19

### REGION AND URBAN-RURAL RESIDENCE

7. Average annual number of hospital discharges and percent distribution by fraction of hospital bill paid for by insurance, for both sexes, according to age and residence: discharges from short-stay hospitals, United States, July 1958-June 1960-----	20
8. Average annual number of hospital discharges and percent distribution by fraction of hospital bill paid for by insurance, for males, according to age and residence: discharges from short-stay hospitals, United States, July 1958-June 1960-----	21

# APPENDIX I

## TECHNICAL NOTES ON METHODS

### Background of This Report

This report on hospital insurance is one of a series of statistical reports prepared by the U.S. National Health Survey which cover separate health-related topics. It is based on information collected in a continuing nationwide sample of households in the Health Interview Survey, which is one of the major projects of the U.S. National Health Survey.

The Health Interview Survey utilizes a questionnaire which elicits information on illnesses, injuries, chronic conditions, disability, medical care, and other health topics in addition to personal and demographic characteristics. As data relating to each of these various broad topics are tabulated and analyzed, separate reports are issued which cover one or more of the specific topics.

The population covered by the sample for the Health Interview Survey is the civilian noninstitutional population of the United States living at the time of interview. The sample does not include members of the Armed Forces, U. S. nationals living in foreign countries, or crews of vessels. It should also be noted that the estimates shown do not represent a complete count of discharges from short-stay hospitals during the two years. Since no adjustment has been made for household members who were hospitalized during the 6-month recall period but who died prior to the time the household was interviewed.

### Statistical Design of the Health Interview Survey

General plan.—The sampling plan of the survey follows a multistage probability design which permits a continuous sampling of the civilian noninstitutional population of the United States. The first stage of this design consists of drawing a sample of 500 from the 1,900 geographically defined Primary Sampling Units (PSU's) into which the United States has been divided. A PSU is a county, a group of contiguous counties, or a Standard Metropolitan Statistical Area.

With no loss in general understanding, the remaining stages can be telescoped and treated in this discussion as an ultimate stage. Within PSU's then, ultimate stage units called segments are defined, also geographically, in such a manner that each segment contains an expected six households. Each week a random sample of about 120 segments is drawn. In the approximately 700 households in these segments, household members are interviewed concerning factors related to health.

Since the household members interviewed each week are a representative sample of the population, samples for successive weeks can be combined into larger samples. Thus the design permits both continuous measurement of characteristics of high in-

cidence or prevalence in the population and, through the larger consolidated samples, more detailed analysis of less common characteristics and smaller categories. The continuous collection has administrative and operational advantages as well as technical assets, since it permits field work to be handled with an experienced, stable staff.

Sample size and geographic detail.—The national sample plan over the two-year period ending June 26, 1960 includes approximately 245,000 persons from 75,000 households in 12,600 segments, with representation from every State. The sample was designed in such a fashion that tabulations can be provided for the four main regions and for urban and rural sectors of the United States.

Collection of data.—The field operations for the household survey are performed by the Bureau of the Census under specifications established by the National Health Survey. In accordance with these specifications the Bureau of the Census designs and selects the sample, conducts the field interviewing, carries out quality control procedures, and reviews and codes the questionnaires.

Processing of data.—The coded data are processed on electronic computers by the National Health Survey staff. Included in this processing are assignment of weights, ratio adjustments, and related procedures necessary to project the data to national estimates. Another phase of this processing procedure involves carrying out internal edits and consistency checks to insure that the data are not incorrect due to errors in recording responses, coding, or processing. No editing can, of course, be expected to remove error or bias in reporting by respondents. Finally, the weekly data are combined to provide quarterly and annual data and tabulations are prepared which give estimates of aggregates, rates, and other statistical measures.

Estimating methods.—Each statistic produced by the survey—for example, the number of discharges from short-stay hospitals for persons age 65 and over—is the result of two stages of ratio estimation.

The first stage ratio factor is: the 1950 decennial census population of the United States divided by the estimated 1950 population in the sample of 500 PSU's selected for the U.S. National Health Survey.

This factor is applied for some 50 color-residence classes.

The second stage ratio factors are: official Bureau of the Census estimates of the current population divided by estimates produced by the U.S. National Health Survey sample. These factors are computed for about 60 age-sex-color classes.

The effect of the ratio estimating process is to make the sample closely representative of the U.S. population by age, sex, color, and residence, thus reducing sampling variance.

As noted, each week's sample represents the population living during that week and characteristics of the population. Consolidation of the weekly samples over any longer time period, such as two years, produces an estimate of the average population and its characteristics during the period covered by the consolidated samples. Thus, prevalence figures based on consolidated samples are estimates of the average prevalence and incidence figures are estimates of the average incidence during the period covered.

Since incidence is a measure of the number of times a given event occurred during a specified period of time, it is necessary to make a further adjustment for incidence estimates where the recall period and the period of incidence are not the same. For a number of events the Health Interview Survey uses a recall period of two weeks. Therefore, the reported data must be multiplied by 26 to convert incidence during a two-week period to estimated annual incidence. In the case of hospitalization items, the Survey questionnaire uses a 12-month recall period. However, present knowledge indicates that annual estimates based on information reported for the most recent 6 months of a 12-month recall period more truly reflect the actual annual incidence. Therefore, only discharges that occurred within 6 months of the interview were tabulated and data for the 6-month reporting period were doubled to produce estimates of the volume of discharges in a year. Subsequently, the estimates for the two 1-year periods, July 1958-June 1959 and July 1959-June 1960, were added together and divided by two to provide an average annual incidence figure.

#### General Qualifications

**Nonresponse.**—Data are adjusted for nonresponse by a procedure which imputes to persons in a household which was not interviewed the characteristics of persons in households which were interviewed in the same segment. The total noninterview rate was 5 percent; 1 percent was refusal, and the other 4 percent was primarily due to the failure to find any eligible household respondent after repeated trials.

**The interview process.**—The statistics presented in this report are based on replies secured in interviews in the sampled households. Each person 18 years of age and over, available at the time of interview, was interviewed individually. Proxy respondents within the household were employed for adults not available at the time of the interview and for children, provided the respondent was closely related to the person about whom information was being obtained.

**Population figures.**—Some of the published tables include population figures for specified categories. Except for certain over-all totals which are adjusted to independent estimates, these figures are based on the sample of households in the U.S. National Health Survey. They are given primarily for the purpose of providing denominators for rate computation and populations for sampling errors, and for this purpose are more appropriate for use with the accompanying measurements of health characteristics than other population data which may be available. In some instances they will permit users to recombine published data into classes more suitable to their specific needs. The population figures differ from corresponding

figures (which are derived from different sources) published in reports of the Bureau of the Census. For population data for general use, see the official estimates presented in Bureau of the Census reports in the P-20, P-25, P-50, P-57, and P-60 series.

#### Reliability of Estimates

Since the estimates are based on a sample, they differ somewhat from the figures that would have been obtained if a complete census had been taken using the same schedules, instructions, and interviewing personnel and procedures. As in any survey, the results are also subject to measurement error.

The standard error is primarily a measure of sampling variability; that is, the variations that might occur by chance because only a sample of the population is surveyed. As calculated for this report, the standard error also reflects part of the variation which arises in the measurement process. It does not include estimates of any biases which might lie in the data. The chances are about 68 out of 100 that an estimate from the sample differs from the value obtained from a complete census by less than the standard error. The chances are about 95 out of 100 that the difference is less than twice the standard error and about 99 out of 100 that it is less than 2½ times as large.

In order to derive standard errors which would be applicable to a wide variety of health statistics and which could be prepared at a moderate cost, a number of approximations were required. As a result, the

Table I. Standard errors of estimates of aggregates

(All numbers shown in thousands)

Size of estimate	Hospital discharges	Hospital days
100-----	24	44
200-----	35	58
500-----	52	87
1,000-----	80	112
2,000-----	112	160
3,000-----	135	192
5,000-----	176	256
10,000-----	256	384
20,000-----	352	592
30,000-----	417	777
50,000-----	505	1,150
100,000-----	560	2,080
200,000-----	640	3,840

**Illustration of use of table I.**—There were 19,875,000 discharges from short-stay hospitals. Since the standard error for this estimate is not shown in table I, it is necessary to interpolate between the standard error for 10,000,000 discharges which is 256,000 and the standard error for 20,000,000 discharges which is 352,000. Such interpolation gives 351,000 as the standard error for 19,875,000 discharges.

tables of standard errors shown in this Appendix should be interpreted as providing estimates of approximate standard errors, rather than as the precise standard errors for any specific statistic.

The following rules will enable the reader to determine the sampling errors for the data contained in this report:

1. Estimates of aggregates: Approximate standard errors of estimates of aggregates of the number of hospital discharges and the number

of hospital days are obtained from the appropriate columns of table I.

2. Estimates of percentages based on discharges: Approximate standard errors of the percentages shown in tables based on hospital discharges are given in the appropriate columns of table II.

3. Estimates of percentages based on hospital days: Approximate standard errors of the percentages shown in tables based on hospital days are given in the appropriate columns of table III.

Table II. Standard errors of percentages based on hospital discharges

When the base of the percentage is: (in thousands)	For estimated percentage of:				
	2 or 98	5 or 95	10 or 90	25 or 75	50
The approximate standard error (expressed in percentage points) is:					
200-----	2.3	3.4	4.8	7.0	8.5
500-----	1.4	2.2	3.0	4.5	5.5
1,000-----	0.9	1.4	1.9	2.8	3.3
2,000-----	0.7	1.1	1.6	2.3	2.9
3,000-----	0.6	1.0	1.3	2.0	2.3
5,000-----	0.5	0.7	0.9	1.5	1.7
10,000-----	0.3	0.5	0.7	1.0	1.2
20,000-----	0.3	0.4	0.5	0.8	0.9

Illustration of use of table II.—An estimated 70.2 percent of the 1,535,000 discharges from proprietary hospitals had some hospital insurance (table 25). Since neither the base nor the percentage is shown in table II it is necessary to interpolate. By interpolating between 75 percent and 50 percent we obtain 2.9 as the standard error of 70.2 with a base of 1,000,000 and 2.4 as the standard error of 70.2 percent with a base of 2,000,000. A final interpolation between these results yields 2.6 as the standard error for a statistic of 70.2 percent with a base of 1,535,000 discharges.

Table III. Standard errors of percentages based on hospital days

When the base of the percentage is: (in thousands)	For estimated percentage of:				
	2 or 98	5 or 95	10 or 90	25 or 75	50
The approximate standard error (expressed in percentage points) is:					
200-----	4.2	6.5	9.0	13.3	16.5
500-----	2.3	3.6	5.0	7.4	9.1
1,000-----	1.7	2.6	3.6	5.3	6.7
2,000-----	1.0	1.6	2.2	3.2	3.9
3,000-----	0.9	1.4	2.0	2.9	3.2
5,000-----	0.6	1.0	1.3	2.0	2.4
10,000-----	0.5	0.7	0.9	1.4	1.7
20,000-----	0.3	0.5	0.7	1.0	1.2
30,000-----	0.3	0.4	0.6	0.9	1.0
50,000-----	0.2	0.3	0.4	0.6	0.7
100,000-----	0.1	0.2	0.3	0.4	0.5
200,000-----	0.1	0.2	0.2	0.3	0.4

Illustration of use of table III.—Of the 6,143,000 hospital days reported for males 75 years of age or over, 22.1 percent of these days were covered by hospital insurance that paid 3/4 or more of the hospital bill (table 3). Since neither the base nor the percentage is shown in table III, it is necessary to interpolate. Interpolating between 10 percent and 25 percent we obtain 1.9 as the standard error for 22.1 percent with a base of 5,000,000 and 1.3 as the standard error of 22.1 percent with a base of 10,000,000. A final interpolation between these results yields 1.7 as the standard error of 22.1 with a base of 6,143,000 days.

## APPENDIX II

### DEFINITIONS OF CERTAIN TERMS USED IN THIS REPORT

#### Terms Relating to Hospitalization

Hospital discharge.—A hospital discharge is the completion of any continuous period of stay of one or more nights in a hospital, as an inpatient, except the period of stay of a well newborn infant. A hospital discharge is recorded whenever a present member of the household is reported to have been discharged from a hospital in the 12-month period prior to the interview week. (For this report estimates were based on discharges which occurred during the 6-month period prior to the interview. See Appendix I.)

Hospital.—For this survey a hospital is defined as any institution meeting one of the following criteria: (1) named in the listing of hospitals in the 1957-1959 Guide Issue of Hospitals, the Journal of the American Hospital Association; (2) named in the listing of hospitals in the 1957-1960 Directories of the American Osteopathic Hospital Association; or (3) named in the annual inventory of hospitals and related facilities submitted by the States to the Division of Hospital and Medical Facilities of the U. S. Public Health Service in conjunction with the Hill-Burton program.

Hospital ownership.—Hospital ownership is a classification of hospitals according to the type of organization that controls and operates the hospital. The category to which an individual hospital is assigned and the definition of these categories follows the usage of the American Hospital Association.

Type of hospital service.—Type of hospital service is a classification of hospitals according to the predominant type of cases for which they provide care. The category to which an individual hospital is assigned and the definition of these categories follows the usage of the American Hospital Association.

Short-stay hospital.—A short-stay hospital is one for which the type of service is: general; maternity; eye, ear, nose, and throat; children's; osteopathic hospital; or hospital department of institution.

Hospital day.—A hospital day is a day in which a person is confined to a hospital. The day is counted as a hospital day only if the patient stays overnight. Thus, a patient who enters the hospital on Monday afternoon and leaves Wednesday noon is considered to have had two hospital days.

Estimates of the total number of hospital days are derived by summing the days for all hospital discharges. (See definition of "Hospital discharge.")

Length of hospital stay.—The length of hospital stay is the duration in days, exclusive of the day of discharge, of a hospital discharge. (See definition of "Hospital discharge.")

Average length of stay.—The average length of stay per discharged patient is computed by dividing

the total number of hospital days for a specified group by the total number of discharges for the same group.

Surgical operation.—A surgical operation includes any cutting or piercing of the skin or other tissue, stitching of cuts or wounds, and setting of fractures and dislocations. Deliveries are counted as operations. Injections and transfusions, however, are not included, nor are routine circumcisions.

Only operations performed in hospitals upon inpatients are included.

Hospital bill.—A hospital bill is defined as the bill submitted by the hospital to the patient for the care and services received during the period of hospitalization. Bills submitted to the patient by doctors, surgeons, anesthetists, or other individuals for services rendered during the period of hospitalization are not considered as part of the hospital bill.

The hospital bill will normally include the cost of the room, meals, regular nursing service, laboratory tests, X-rays, medicines, injections, use of the operating room, and other services that may be provided for the patient. When the charges for special nurses, anesthetists, ambulance service, etc., are included by the hospital on the bill submitted to the patient, these are also considered as part of the hospital bill for purposes of the Survey.

Proportion of bill paid by insurance.—The proportion of the bill paid (also referred to as fraction of bill paid) by insurance was determined by the respondent's own estimate of the part of the total hospital bill that was paid for or was expected to be paid for by insurance. The response categories used are; (a) no part of the bill paid by insurance; (b) less than 1/2; (c) 1/2 up to, but not including, 3/4; (d) 3/4 or more.

Hospital insurance.—Hospital insurance is any insurance plan designed to pay all or part of the hospital bill (see definition of "Hospital bill") of the insured individual. The insurance can be either a group or an individual policy with the premiums paid by the individual, his employer, a third party such as a union, fraternal organization or family member, or a combination of these. Benefits received under the plan can be in the form of payment to the individual or to the hospital. However, the plan must be a formal one with defined membership and benefits rather than an informal one. For example, an employer simply paying the hospital bill for an employee would not constitute a health insurance plan. "Workmen's compensation," or employee's liability insurance, designed to pay all or part of the hospital bill of the employee, is considered as hospital insurance. The important ingredient in this definition is that the person receiving the benefit has been specifically named either as an individual or part of a specified group.

The insurance does not have to cover costs of hospitalization for all diseases and injuries, as long as it covers the particular condition for which the person was hospitalized.

The use of funds from other kinds of insurance benefits to pay hospital bills, such as Social Security benefits or disability insurance would not be counted as hospital insurance. Free hospital care is not considered hospital insurance. Examples of free care are public assistance or public welfare care, veteran's care given free of charge, care given to dependents of military personnel (Medicare Plan), care given children under the Crippled Children's program, and care of patients admitted free for research purposes. Also excluded as hospital insurance in this study is liability insurance that pays for hospital care, if it is carried by someone other than the person hospitalized, his family, his employer, or his union or fraternal organization. For example, a person hospitalized from an automobile accident in which the person other than the one hospitalized carried liability insurance that paid for the hospital care for the person injured.

#### **Demographic, Social, and Economic Terms**

**Age.**—The age recorded for each person is the age at last birthday. Age is recorded in single years and grouped in a variety of distributions depending upon the purpose of the table.

**Race.**—Race is recorded as "White," or "Non-white." "Nonwhite" includes Negro, American Indian, Chinese, Japanese, and so forth. Mexican persons are included with "White" unless definitely known to be Indian or other nonwhite race.

**Income of family or of unrelated individuals.**—Each member of a family is classified according to the total income of the family of which he is a member. Within the household all persons related to each other by blood, marriage, or adoption constitute a family. Unrelated individuals are classified according to their own income.

The income recorded is the total of all income received by members of the family (or by an unrelated individual) in the 12-month period ending with the week of interview. Income from all sources is included, e.g., wages, salaries, rents from property, pensions, help from relatives, and so forth.

**Veteran status.**—In order to establish veteran status, information is secured concerning service in the Armed Forces. The information is obtained only for males 17 years of age and over. The categories of service in the Armed Forces include the following: no military service, peacetime service only, Spanish-American War service, World War I service, World War II service, Korean conflict service, and military service, period unknown.

Service in the Armed Forces means active duty for any time at all in the U.S. Army, Navy, Air Force, Marine Corps, or Coast Guard. Peacetime service in the Merchant Marine, in a National Guard unit, or in active reserve training is not considered to be service in the Armed Forces.

In cases of service in more than one war, the man is classified according to the latest war in which he served.

When males 17 years of age and over are grouped into two classes, veterans and nonveterans, men with peacetime service only are included with those having no military service as nonveterans.

**Major activity.**—All persons 6 years old or over are classified according to their major activity during the 12-month period prior to the week of interview. The "major" activity, in case more than one is reported, is the one at which the person spent the most time during the 12-month period.

The categories of major activity are: usually working, usually going to school, usually keeping house, retired, and other. For several reasons these categories are not comparable with somewhat similarly named categories in official Federal labor force statistics. In the first place, the responses concerning major activity are accepted without detailed questioning, since the objective of the question is not to estimate the numbers of persons in labor force categories but to identify crudely certain population groups which may have differing health problems. In the second place, the figures represent the major activity over the period of an entire year, whereas official labor force statistics relate to a much shorter period, usually one week. Finally, in the definitions of the specific categories which follow, certain marginal groups are classified in a different manner to simplify the procedures.

1. Usually working.—A term applied to an individual, 17 years of age or older, who was gainfully employed as a paid employee, a self-employed person, or as a worker in a family business for more than half of the 12 months prior to the interview. A person who does only volunteer or unpaid work—such as work in his own home or work for the church or community—is not considered gainfully employed.
2. Usually going to school and preschool.—This group is defined by age. All persons under 17 years of age fall into this category. Any person 17 years old or over who reports his major activity as usually going to school is classified as "Other."
3. Usually keeping house includes any activity described as "keeping house" which cannot be classified as "working" or "going to school."
4. Retired includes persons 45 years old or over who consider themselves to be retired. In case of doubt, a person 45 years old or over is counted as retired if he, or she, has either voluntarily or involuntarily stopped working, is not looking for work, and is not described as "keeping house." A retired person may or may not be unable to work.
5. Other includes persons 17 years of age or over not classed in any of the other categories. Examples of inclusions are: a person who states that he spent most of the past 12 months looking for work or going to school, a person doing volunteer work only, a person under 45 years of age who describes himself as "retired" or "taking it easy," a person under 45 years of age who is described as "unable to work," or a person 45 years of age or over

who describes himself as "unable to work" and is not "retired."

#### Location of Residence Terms

Urban and rural residence.—The definition of urban and rural areas used in the U. S. National Health Survey is the same as that used in the 1950 Census. According to this definition, the urban population comprises all persons living in (a) places of 2,500 inhabitants or more incorporated as cities, boroughs, and villages; (b) incorporated towns of 2,500 inhabitants or more except in New England, New York, and Wisconsin, where "Towns" are simply minor civil divisions of counties; (c) the densely settled urban fringe, including both incorporated and unincorporated areas, around cities of 50,000 or more; and (d) unincorporated places of 2,500 inhabitants or more outside any urban fringe. The remaining population is classified as rural.

Farm and nonfarm residence.—The rural population may be subdivided into the rural-farm population, which comprises all rural residents living on farms, and the rural-nonfarm population, which comprises the remaining rural population.

In deciding whether the members of a household reside on a farm or a ranch, the statement of the house-

hold respondent that the house is on a farm or ranch is accepted, with the following exception. A house occupied by persons who pay cash rent for house and yard only is not counted as a farm or ranch even if the surrounding area is farm land. This special case does not cover: (1) the living quarters of a tenant farmer who rents farm land as well as house and yard; (2) the quarters of a hired hand who receives living quarters on a farm as part of his compensation; or (3) separate living quarters inside a structure which is classified as on a farm. In all these cases the living quarters are counted as on a farm.

Region.—The least detailed classification of the population by geographic area of residence is provided by the grouping of states into four major regions. These regions correspond to those used by the Bureau of the Census. They are as follows:

<u>Region</u>	<u>Geographic Divisions Included</u>
Northeast	New England, Middle Atlantic
North Central	East North Central, West North Central
South	South Atlantic, East South Central, West South Central
West	Mountain, Pacific

# APPENDIX III

## QUESTIONNAIRE

The items below show the exact content and wording of the basic questionnaire used in the nationwide household survey of the U. S. National Health Survey. The actual questionnaire is designed for a household as a unit and includes additional spaces for reports on more than one person, condition, accident or hospitalization. Such repetitive spaces are omitted in this illustration.

**CONFIDENTIAL** - The National Health Survey is authorized by Public Law 652 of the 84th Congress (70 Stat 489; 42 U.S.C. 305). All information which would permit identification of the individual will be held strictly confidential, will be used only by persons engaged in and for the purposes of the survey, and will not be disclosed or released to others for any other purposes (22 FR 1687).

FORM NMS-3 (6-17-52)		U.S. DEPARTMENT OF COMMERCE BUREAU OF THE CENSUS ACTING AS COLLECTING AGENCY FOR THE U.S. PUBLIC HEALTH SERVICE				1. Questionnaire of _____ Questionnaires	
2. (a) Address or description of location  (b) Mailing address if not shown in (a):		3. Ident. Code	4. Sub-sample weight	5. Sample Number	6. PSU Number	7. Segment No.	8. Serial No.
(c) Type of living quarters: <input type="checkbox"/> Dwelling unit <input type="checkbox"/> Other (d) Name of Special Dwelling Place _____ Code _____		9. Is this house on a farm or ranch? <input type="checkbox"/> Yes <input type="checkbox"/> No		10. What is the telephone number here? <input type="checkbox"/> No phone		11. In case I've overlooked anything, what is the best time to call?	
12. Are there any other living quarters, occupied or vacant, in this building (apartment)? <input type="checkbox"/> Yes <input type="checkbox"/> No		<b>INSTRUCTIONS</b> If "Yes" to questions 12, 13 or 14 apply definition of a dwelling unit to determine whether one or more additional questionnaires should be filled and whether the listing is to be corrected.					
13. Does anyone else living in this building use YOUR ENTRANCE to get to his living quarters? <input type="checkbox"/> Yes <input type="checkbox"/> No		14. Is there any other building on this property for people to live in - either occupied or vacant? <input type="checkbox"/> Yes <input type="checkbox"/> No					
<b>15. RECORD OF CALLS AT HOUSEHOLDS</b>							
Item _____ Date _____ Time _____		1	2	3	4	5	Com.
Entire household							
Callbacks for individual respondents Col. No. _____ Date _____ Time _____							
<b>16. REASON FOR NON-INTERVIEW</b>							
TYPE A <input type="checkbox"/> Refusal <input type="checkbox"/> No one at home - repeated calls <input type="checkbox"/> Temporarily absent <input type="checkbox"/> Other (Specify) _____		TYPE B <input type="checkbox"/> Vacant - non-seasonal <input type="checkbox"/> Vacant - seasonal <input type="checkbox"/> Usual residence elsewhere <input type="checkbox"/> Armed Forces <input type="checkbox"/> Other (Specify) _____		TYPE C <input type="checkbox"/> Demolished <input type="checkbox"/> In sample by mistake <input type="checkbox"/> Eliminated in sub-sample <input type="checkbox"/> Other (Specify) _____		TYPE Z Interview not obtained for: Cols. because: _____	
Comments on non-interview _____							
17. Signature of Interviewer _____						18. Code _____	
Special instructions or orders _____							

1. (a) What is the name of the head of this household? (Enter name in first column) (b) What are the names of all other persons who live here? (List all persons who usually live here, and all persons staying here who have no usual place of residence elsewhere. List these persons in the prescribed order.)		Last name (1)  First name and initial
(c) Do any (other) lodgers or roomers live here? <input type="checkbox"/> No <input type="checkbox"/> Yes (List) _____ (d) Is there anyone else who lives here who is now away on business? On a visit? Temporarily in a hospital? <input type="checkbox"/> No <input type="checkbox"/> Yes (List) _____ (e) Is there anyone else staying here now? <input type="checkbox"/> No <input type="checkbox"/> Yes (List) _____ (f) Do any of the people in this household have a home elsewhere? <input type="checkbox"/> No (leave on questionnaire) <input type="checkbox"/> Yes (If not a household member, delete)		
2. How are you related to the head of the household? (Enter relationship to head, for example: head, wife, daughter, grandson, mother-in-law, partner, lodger, lodger's wife, etc.)		Relationship Head
3. How old were you on your last birthday?		Age <input type="checkbox"/> Under 1 year
4. Race (Check one box for each person)		<input type="checkbox"/> White <input type="checkbox"/> Negro <input type="checkbox"/> Other
5. Sex (Check one box for each person)		<input type="checkbox"/> Male <input type="checkbox"/> Female
If 17 years old or over, ask: 6. Are you now married, widowed, divorced, separated or never married? (Check one box for each person)		<input type="checkbox"/> Under 17 years <input type="checkbox"/> Married <input type="checkbox"/> Divorced <input type="checkbox"/> Widowed <input type="checkbox"/> Separated <input type="checkbox"/> Never married
If 17 years old or over, ask: 7. What is the highest grade you completed in school? (Circle highest grade completed or check "None")		<input type="checkbox"/> Under 17 years Elem: 1 2 3 4 5 6 7 8 High: 1 2 3 4 College: 1 2 3 4 5 <input type="checkbox"/> None
If Male and 17 years old or over, ask: 8. (a) Did you ever serve in the Armed Forces of the United States? If "Yes," ask: (b) Are you now in the Armed Forces, not counting the reserves? (If "Yes," delete this person from questionnaire)		<input type="checkbox"/> Fem. or und. 17 yrs. <input type="checkbox"/> Yes <input type="checkbox"/> No <input type="checkbox"/> Yes <input type="checkbox"/> No
(c) Was any of your service during a war or was it peace-time only? If "War," ask: (d) During which war did you serve? If "Peace-time" only, ask: (e) Was any of your service between June 27, 1950 and January 31, 1957?		<input type="checkbox"/> War <input type="checkbox"/> Peace-time only <input type="checkbox"/> WW I <input type="checkbox"/> Korean <input type="checkbox"/> Other <input type="checkbox"/> Yes <input type="checkbox"/> No <input type="checkbox"/> Under 17 years
If 17 years old or over, ask: 9. (a) What were you doing most of the past 12 months - (For males): working, or doing something else? (For females): working, keeping house, or doing something else? If "Something else" checked, and person is 45 years old or over, ask: (b) Are you retired?		<input type="checkbox"/> Working <input type="checkbox"/> Keeping house <input type="checkbox"/> Something else <input type="checkbox"/> Yes <input type="checkbox"/> No
If "Working," in q. 9(a), ask: 10. (a) Were you working last week or the week before? If any entry in q. 9(a) besides "Working," ask: (b) Did you work at a job or business at any time last week or the week before? If "No" in q. 10(a) or 10(b), ask: (c) Even though you did not work last week or the week before, do you have a job or business?		<input type="checkbox"/> Yes <input type="checkbox"/> No <input type="checkbox"/> Yes <input type="checkbox"/> No <input type="checkbox"/> Yes <input type="checkbox"/> No

NOTE: Beginning with question 11 you are to interview for himself or herself, each adult person who is at home.

11. Were you sick at any time LAST WEEK OR THE WEEK BEFORE? (That is, the 2-week period which ended last Sunday)? (a) What was the matter? (b) Anything else?	<input type="checkbox"/> Yes <input type="checkbox"/> No
12. Last week or the week before did you take any medicine or treatment for any condition (besides... which you told me about)? (a) For what conditions? (b) Anything else?	<input type="checkbox"/> Yes <input type="checkbox"/> No
13. Last week or the week before did you have any accidents or injuries? (a) What were they? (b) Anything else?	<input type="checkbox"/> Yes <input type="checkbox"/> No
14. Did you ever have on (any other) accident or injury that was still bothering you last week or the week before? (a) How did it bother you? (b) Anything else?	<input type="checkbox"/> Yes <input type="checkbox"/> No
15. AT THE PRESENT TIME do you have any ailments or conditions that have lasted for a long time? (If "No.") Even though they don't bother you all the time? (a) What are they? (b) Anything else?	<input type="checkbox"/> Yes <input type="checkbox"/> No
16. Has anyone in the family - you, your-, etc. - had any of these conditions DURING THE PAST 12 MONTHS?  (Read Card A, condition by condition; record any conditions mentioned in the column for the person)	<input type="checkbox"/> Yes <input type="checkbox"/> No
17. Does anyone in the family have any of these conditions?  (Read Card B, condition by condition; record any conditions mentioned in the column for the person)	<input type="checkbox"/> Yes <input type="checkbox"/> No
R Show in each person's column who responded for questions 11-17. If person responded for self, show whether entirely or partly.	<input type="checkbox"/> Responded for self-entirely <input type="checkbox"/> Responded for self-partly Col. No. _____ was respondent

Table I - ILLNESSES, IMPAIRMENTS AND INJURIES

Line number	Col. No. of person	Did you EVER or any time talk to a doctor about ...?	What did the doctor say it was? ... did he give it a medical name?	What was the cause of ...? (This column to be asked if entry in Col. (d-1) is an Impairment or a Symptom or if entry in Col. (d-1) is from q. 14 or q. 17) (If "Cause" is an injury, also fill Table A)	If eye trouble of any kind and 6 years old or over, ask: Can you see well enough to read ordinary newspaper prior with glasses?	What kind of ... trouble is it? Ask only for: Any entry in Col. (d-1) or (d-2) that includes the words: "Trouble" "Condition" "Disease" and, also for any entry of: "Allergy" "Anemia" "Arthritis" "Asthma" "Metast" (any mention of) "Hemiparesis" "Stroke" "Tumor" (or cysts, growths)	What part of the body is affected? Ask only for: Impairments Injuries Abscesses, boils Infections, inflammation, sores, ulcers Aches, pains, soreness, weakness Bleeding or blood clots Cancer, tumor cysts or growths Neuralgia or neuritis	LAST WEEK OR THE WEEK BEFORE did ... cause you to cut down on your usual activities for as much as one day?	How many days, included, were you in bed all or most of the day?	How many of these days were you in bed all or most of the day?	If 6-16 years old ask: How many days did ... keep you from school last week or the week before?										
												(a)	(b)	(c)	(d-1)	(d-2)	(d-3)	(d-4)	(d-5)	(e)	(f)
1		<input type="checkbox"/> Yes <input type="checkbox"/> No			<input type="checkbox"/> Yes <input type="checkbox"/> No																

Table II - HOSPITALIZATION DURING PAST 12 MONTHS

Line number	Col. No. of person	When did you enter the hospital? (Month, year)	How many days were you in the hospital, not counting the day you left?	To interviewer			Was this person still in the hospital on last Sunday night?	What did they say at the hospital the condition was - did they give it a medical name? (If "they" didn't say, ask: What did the last doctor you talked to say it was? (Show some detail as in col. (d-1)-(d-5) of T.I. (If condition from accident or injury, also fill Table A)	Were any operations performed on you during this stay at the hospital? If "Yes," (a) What was the name of the operation? (b) Any other operations?
				How many of these days were in the past 12 months?	Will you need to ask col. (a) (f) and (g)?	How many of these days were in the last week or the week before?			
(a)	(b)	(c)	(d)	(e)	(f)	(g)	(h)	(i)	
1		Mo: _____ Yr: _____	Days _____	<input type="checkbox"/> All or <input type="checkbox"/> Yes <input type="checkbox"/> No	<input type="checkbox"/> Yes <input type="checkbox"/> None	<input type="checkbox"/> Yes <input type="checkbox"/> No		<input type="checkbox"/> Yes <input type="checkbox"/> No	

Table A - (Accidents and injuries)

1. When did it happen? Year: _____ (If the year is 1959 or 1960, also enter the month) _____ Month: _____	<input type="checkbox"/> Accident happened last week or the week before
2. At the time of the accident, what part of the body was hurt? What kind of injury was it? Anything else?	<input type="checkbox"/> Accident happened last week or the week before
3. (a) Was a car, truck, bus or other motor vehicle involved in any way? <input type="checkbox"/> Yes <input type="checkbox"/> No (Go to q. 7) (b) Was more than one motor vehicle involved? <input type="checkbox"/> Yes (more than one) <input type="checkbox"/> No (c) Was it (either one) moving at the time? <input type="checkbox"/> Yes <input type="checkbox"/> No (Go to q. 7)	
4. Were you outside the vehicle, getting in or out of it, a passenger or were you the driver? 1. <input type="checkbox"/> Outside 2. <input type="checkbox"/> Getting in or out 3. <input type="checkbox"/> Passenger 4. <input type="checkbox"/> Driver	
If "Outside"	
5. (a) How did the accident happen? 1. <input type="checkbox"/> Collision between motor vehicle and person riding on bicycle, in streetcar, on railroad train, on horse-drawn vehicle 2. <input type="checkbox"/> Collision between motor vehicle and person who was walking, running, or standing 3. <input type="checkbox"/> Other (Specify) _____ (b) What kind of motor vehicle was involved? 1. <input type="checkbox"/> Car 2. <input type="checkbox"/> Taxi 3. <input type="checkbox"/> Bus 4. <input type="checkbox"/> Truck 5. <input type="checkbox"/> Motorcycle 6. <input type="checkbox"/> Other (Specify) _____ (Go to question 2)	
If "Getting in or out," "Passenger" or "Driver"	
6. (a) How did the accident happen? 1. <input type="checkbox"/> Collision with another motor vehicle on roadway 2. <input type="checkbox"/> Collision with some other object on roadway (Specify object) _____ 3. <input type="checkbox"/> Came to sudden stop on roadway 4. <input type="checkbox"/> Ran off roadway 5. <input type="checkbox"/> Other (Specify) _____ (b) What kind of motor vehicle were you in (getting in) (getting out of) when the accident happened? 1. <input type="checkbox"/> Car 2. <input type="checkbox"/> Taxi 3. <input type="checkbox"/> Bus 4. <input type="checkbox"/> Truck 5. <input type="checkbox"/> Motorcycle 6. <input type="checkbox"/> Other (Specify) _____ (Go to question 2)	

18. (a) I have some questions about health insurance. We don't want to include insurance that pays ONLY for accidents, but we are interested in all other kinds... Do you, your... have insurance that pays all or part of the bills when you go to the hospital?

If "Yes,"

(b) What is the name of the plan (or plans)? Any other plans?

(c) Who is covered by this plan (each plan)? (Check "Yes," in 18(a) for each person covered)

(d) Does the plan (either plan) pay any part of the surgeon's bill for an operation?

19. (a) Again, excluding insurance that pays ONLY for accidents, do you, your... have insurance that pays all or part of the bill for doctor's visits at home or at his office? If "Yes,"

(b) What is the name of the plan (or plans)? Any other plans?

(c) Who is covered by this plan (each plan)? (Check "Yes," in 19(a) for each person covered)

20. (a) DURING THE PAST 12 MONTHS has anyone in the family been a patient in a hospital overnight or longer? If "Yes," (b) How many times were you in the hospital? No. of times

21. (a) During the past 12 months has anyone in the family been a patient in a nursing home or sanitarium? If "Yes," (b) How many times were you in a nursing home or sanitarium? No. of times

22. During the past 12 months in which group did the total income of your family fall, that is, your...s, etc.? (Show Card H) Include income from all sources, such as wages, salaries, rents from property, pensions, help from relatives, etc.

Table I - ILLNESSES, IMPAIRMENTS AND INJURIES

If "Yes," in q. 18(a), 18(b) or 18(c), ask:	Did you first notice... (did it happen) before that time?	To interviewer:	Did you first notice... (did it happen) DURING THE PAST 12 MONTHS or before that time? (If during past 12 months, ask "Which month?")	How long since you last talked to a doctor about...? (If less than one month, enter "1" for "Mo.")	Do you still take any medicine or treatment that the doctor prescribed kept you for...? Or, follow any advice he gave?	About... many days during the past 12 months, has... been in bed for all or most of the day?	If 1 or more in Col. (q-1) and "No" in Col. (e), ask: How many of these days were during last week or the week before?	Ask after completing last condition for each person:				If "1," "2," or "3" in col. (r) ask:		
								Please look at this card and read each statement. Then tell me which of the conditions you have told me about? (Show Cards C, E, as appropriate)	If "Yes" in col. (a) Is this because...? (Enter X or line for each condition named)	How long have you been...? (Insert the week of the statement selected)	If 17 years old or over, ask: Were you working on a job or business up to that time?		Please look at this card and read each statement. Then tell me which statement fits you best. (Show Card G)	
(j)	(k)	(l)	(m)	(na)	(n)	(o)	(p)	(q-1)	(q-2)	(r)	(s)	(t)	(u)	(v)
Days or None	Check one: Before During 3 3 mos. mos. (Go in col. (n))	Did... start during the past 2 weeks or before that time? (If during past 2 weeks, ask: Which week, last week or the week before?)	If col. (k) is checked, or the condition is on either one of Cards A or B, continue; otherwise STOP	Mo. _____ Yes _____ No _____ No Dt. _____	Mo. _____ Yes _____ No _____ No Dt. _____	Days or None	Days or None	Days or None	Days or None	Yes _____ No _____	Yes _____ No _____	Yes _____ No _____	Yes _____ No _____	Yes _____ No _____

Table II - HOSPITALIZATION DURING PAST 12 MONTHS

What is the name and address of the hospital you were in? (Enter name, city and State; if city not known, enter County)	For completed hospitalizations only ("No" in Col. (g)):			Who carries the cost of this insurance - that is, who pays the premium?
	Was any of the hospital bill paid for by any kind of insurance?	If "No" to both cols. (b) and (c), ask: Do you expect any of the hospital bill to be paid for by insurance or any plan of this kind?	Was part of the hospital bill (will be) taken care of by insurance?	
(i)	(b)	(c)	(d)	(e)
	Yes (Skip to col. a) No	Yes (Skip to col. a) No	Yes Under 1/2 1/2 up to 1/3 1/3 or more	Family member(s) Employer Union, clubs, etc.

7. How did the accident happen?

A. 1.  Any injury involving an uncontrolled fire or explosion

2.  Any injury involving the discharge of a firearm

3.  Any injury from an accident involving a non-motor vehicle in motion (recreator, railroad train, airplane, boat, bicycle, horse-drawn vehicle)

B. 4.  Any injury inflicted by machinery (but or motor driven while in operation (Specify type))

5.  Any injury inflicted by edge or point of knife, scissors, nail or other cutting or piercing implement

6.  Any injury inflicted by foreign body in eye, windshield, or other articles

7.  Any injury inflicted by animal or insect

8.  Any injury inflicted by poisonous substance swallowed (Specify substance)

C. 9.  Fall on stairs or steps or from a height

10.  All other falls

11.  Bumped into object or person (covers all collisions between persons including striking, punching, kicking, etc.)

12.  Struck by moving object (include objects held in own hand or hand of other person, also falling, flying or thrown objects)

13.  Handling or stepping on sharp or rough object (include wounds from splinters, broken glass, etc.)

14.  Caught in, pinched or crushed (i.e., between two moving objects or between a moving and a stationary object)

15.  Came in contact with hot object or substance or open flame

16.  Lifting or other exertion

17.  Tripping, stumbling, etc.

D. 18.  Other (Specify how accident happened)

8. (a) Where did the accident happen - at home or some other place?

1.  At home (inside house) 2.  At home (adjacent premises) 3.  Some other place

If "Some other place," ask:

(b) What kind of place was it?

3.  Street and highway 4.  Farm 5.  Industrial place and premises 6.  School, (including school premises) 7.  Place of recreation and sports, except at school 8.  Other (Specify)

9. Were you at work or your job or business when the accident happened?

1.  Yes 2.  No 3.  While in Armed Services 4.  Under 17 at time of accident
