# NCHS Rapid Surveys System: Round 1

Restricted-use no-frequency codebook
(Document Version: 30 January 2023)

**Introduction:**

To protect confidentiality, detailed information for some variables are not available on the NCHS Rapid Surveys System public-use data files. Researchers interested in working with variables that were suppressed or edited to protect confidentiality may submit a proposal to the NCHS Research Data Center (RDC). The RDC is responsible for protecting the confidentiality of survey respondents, study subjects, or institutions while providing access to the restricted-use data for statistical purposes. Additional information is available at: https://www.cdc.gov/rdc/.

| BMI | |
|---|---|
| LABEL | DERIVED: Body Mass Index (BMI) |
| NOTES TEXT | BMI was calculated using the in-house version of the height and weight variables, which contain the greater range of height and weight values than are available on the public use file. The range of possible BMI values listed (1-99.95) does not reflect actual calculated BMI values at the extremes of the range, but rather, allows for the theoretical possibility of such unlikely values. BMI = [Weight (kg)/[Height (m) squared]] rounded to 2 decimal places. Conversion factors: 1 kilogram (kg) = 2.20462 pounds; 1 meter (m) = 39.37008 inches. Extreme weights (<50lbs or >500lbs) and heights (<24 in. or >95 in.) were excluded for the calculation. BMI is topcoded at 99.95. This variable was included in the questionnaire for benchmarking purposes as gold standard sources of this measure exist elsewhere. Caution using this variable as an outcome of interest. |
