Variable:	WG_DISAB
Label:	DERIVED: Washington Group disability indicator
Notes:	This variable is based on DIS_DIFSEE, DIS_DIFHEAR, DIS_DIFWLK, DIS_DIFCOM, DIS_DIFREM, and DIS_DIFCARE. This variable is an indicator of disability status based on the Washington Group Short Set on Functioning (WG-SS) that identifies adults who are at greater risk than the general population for experiencing restrictions in participation because of difficulties doing certain universal, basic actions. This recode classifies adults with disability as those reporting "a lot of difficulty" or "cannot do at all" for at least one of six domains of functioning: seeing (even if wearing glasses), hearing (even if wearing hearing aids), mobility (walking or climbing stairs), communication (understanding or being understood by others), cognition (remembering or concentrating), and self-care (such as washing all over or dressing). The remaining adults, that is those who responded "some difficulty" or "no difficulty" to at least one domain (and did not report "a lot of difficulty" or "cannot do at all" for any of the six domains of functioning) are classified as without disability. Those responding "don't know" or "refused" to all six questions are excluded.
