Variable:	WG_DISAB
Label:	DERIVED: Washington Group disability indicator
Notes:	This variable is based on DIS_DIFSEE, DIS_DIFHEAR, DIS_DIFWLK, DIS_DIFCOM, DIS_DIFREM, and DIS_DIFCARE. This variable is an indicator of disability status based on the Washington Group Short Set on Functioning (WG-SS) that identifies adults who are at greater risk than the general population for experiencing restrictions in participation because of difficulties doing certain universal, basic actions. This recode classifies adults with disability as those reporting "a lot of difficulty" or "cannot do at all" for at least one of six domains of functioning: seeing (even if wearing glasses), hearing (even if wearing hearing aids), mobility (walking or climbing stairs), communication (understanding or being understood by others), cognition (remembering or concentrating), and self-care (such as washing all over or dressing). The remaining adults, that is those who responded "some difficulty" or "no difficulty" to at least one domain (and did not report "a lot of difficulty" or "cannot do at all" for any of the six domains of functioning) are classified as without disability. Those responding "don't know" or "refused" to all six questions are excluded.

Label:	Type of place for usual care
Notes:	This variable was included in the questionnaire for benchmarking purposes as gold standard sources of this measure exist elsewhere. Please exercise caution when using this variable as an outcome of interest.
Question:	What kind of place do you go to most often? A doctor's office or health center is a place where you see the same doctor or the same group of doctors every visit, where you usually need to make an appointment ahead of time, and where your medical records are on file. Urgent care centers and clinics in a drug store or grocery store are places where you do not need to make an appointment ahead of time, and usually do not see the same health care provider at each visit.
