

Comments on vision domain

**10th Washington Group meeting
Luxembourg 3-5 November 2010**

Andres Montes

ESCAP Statistics Division

Overall assessment

- The vision questions perform relatively well providing clear and conclusive findings.
- This suggests that the current set of extended questions should be adopted with some minor changes to increase the accuracy of the measures.

Main issues

- Confusion with ‘glasses’ clause in the first question.
- ‘across the room’ – no exact notion about the size of room.
- ‘picture on a coin’ – what’s the distance for viewing a coin?

Proposed set

1. Do you wear glasses for seeing?
 - a) No.
 - b) Yes, to see far away.
 - c) Yes, to see up close.
 - d) Other reason.
2. Do you have difficulty seeing [even when wearing glasses]?
3. Do you have difficulty clearly seeing someone's face across a room [even when wearing glasses]? *Give examples?*
4. Do you have difficulty clearly seeing the picture on a coin at arms length [even when wearing glasses]? *Give examples?*
