

Health Data *Interactive*

*Explore, customize, download:
pre-tabulated national health
statistics*

Objectives

- By the end of today's workshop, you should:
 - Know how to navigate to and through the Health Data Interactive website
 - Understand the website's general benefits and limitations
 - Be able to locate tables of interest
 - Be able to customize and retrieve data in a useful form

What is Health Data Interactive (HDI)?

- HDI is a collection of online, interactive tables on the health and well-being of the US population
- HDI provides pre-tabulated statistics for several covariates:
 - Age
 - Race and ethnicity
 - Gender
 - Year
 - Geographic location (when available)
 - Income (when available)
 - Urbanicity (when available)

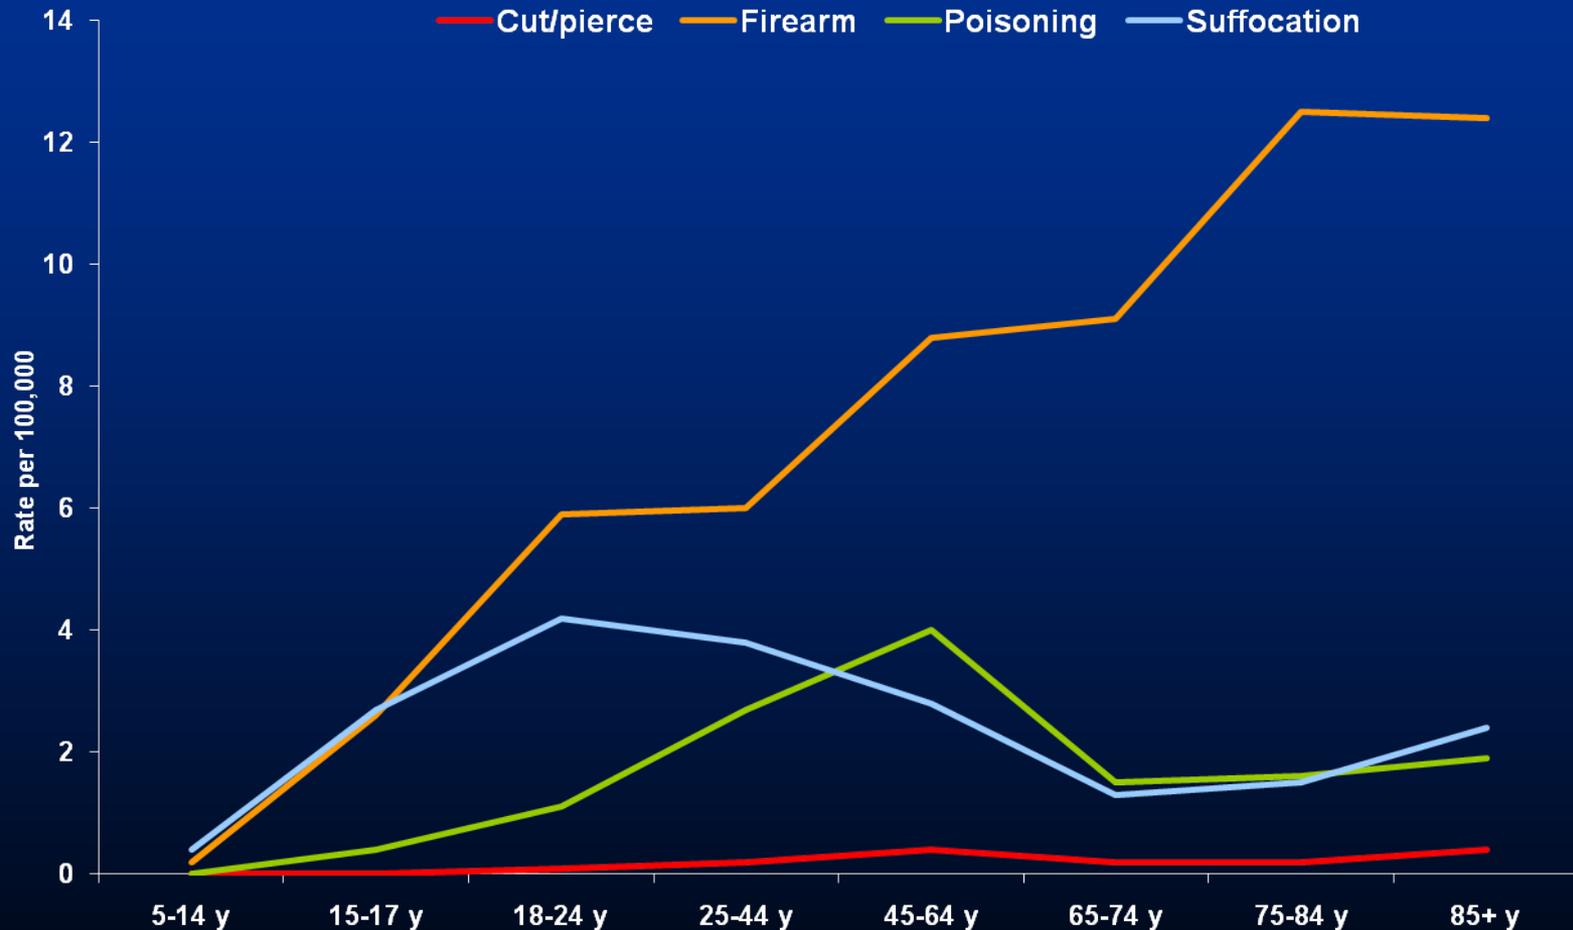

Data sources fall into 3 categories

1. Data systems with total counts of events
 - Births and Deaths from the National Vital Statistics System
2. Population surveys
 - National Health Interview Survey
 - National Health and Nutrition Examination Survey
3. Administrative data
 - National Hospital Ambulatory Medical Care Survey
 - National Hospital Discharge Survey
 - Medicare Current Beneficiary Survey

Before demonstrating how to use HDI, we'll show two examples of HDI data in use

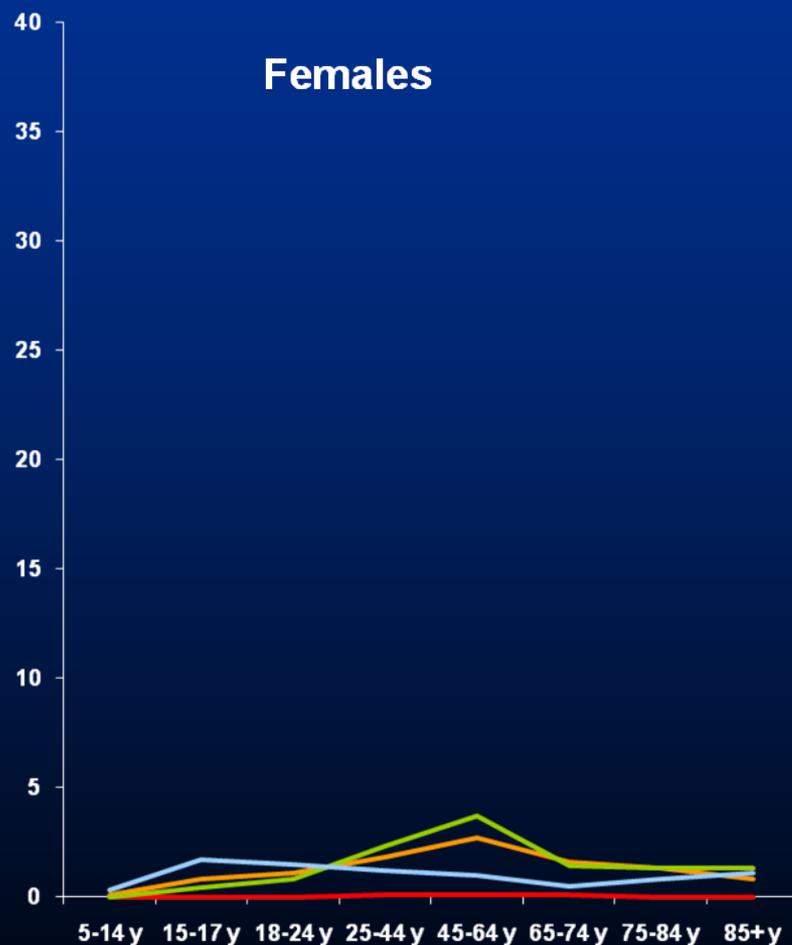

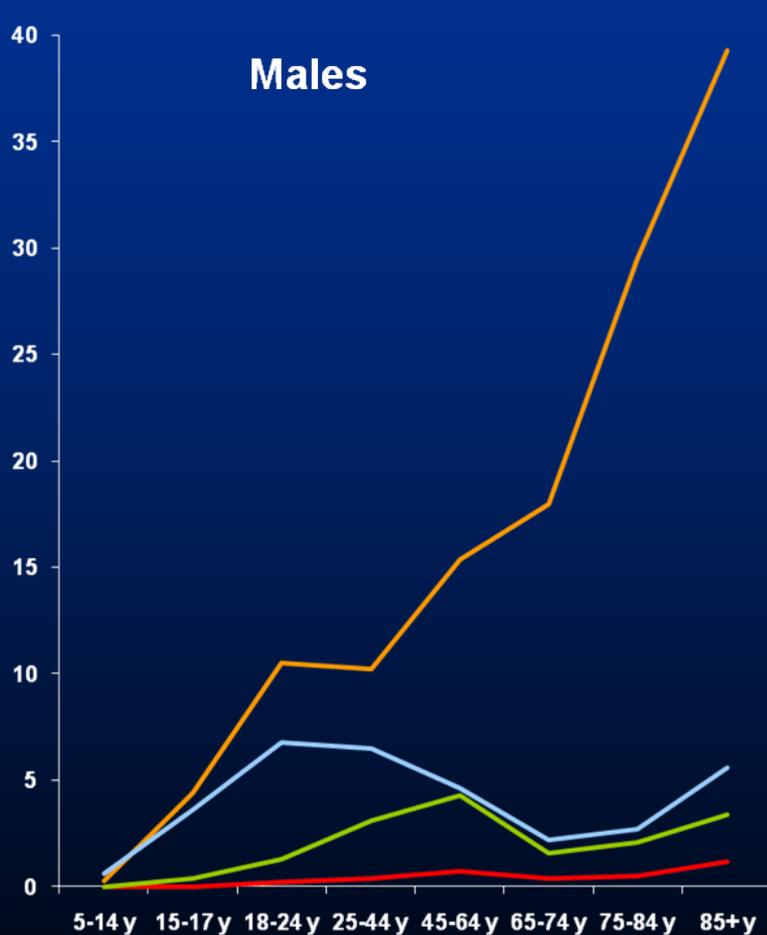

- Exploring patterns in injury death rates
- Leading causes of emergency department visits by age group

A custom-made chart from the injury mortality HDI table: Suicide per 100,000, by age group and mechanism-- United States, 2004-2006

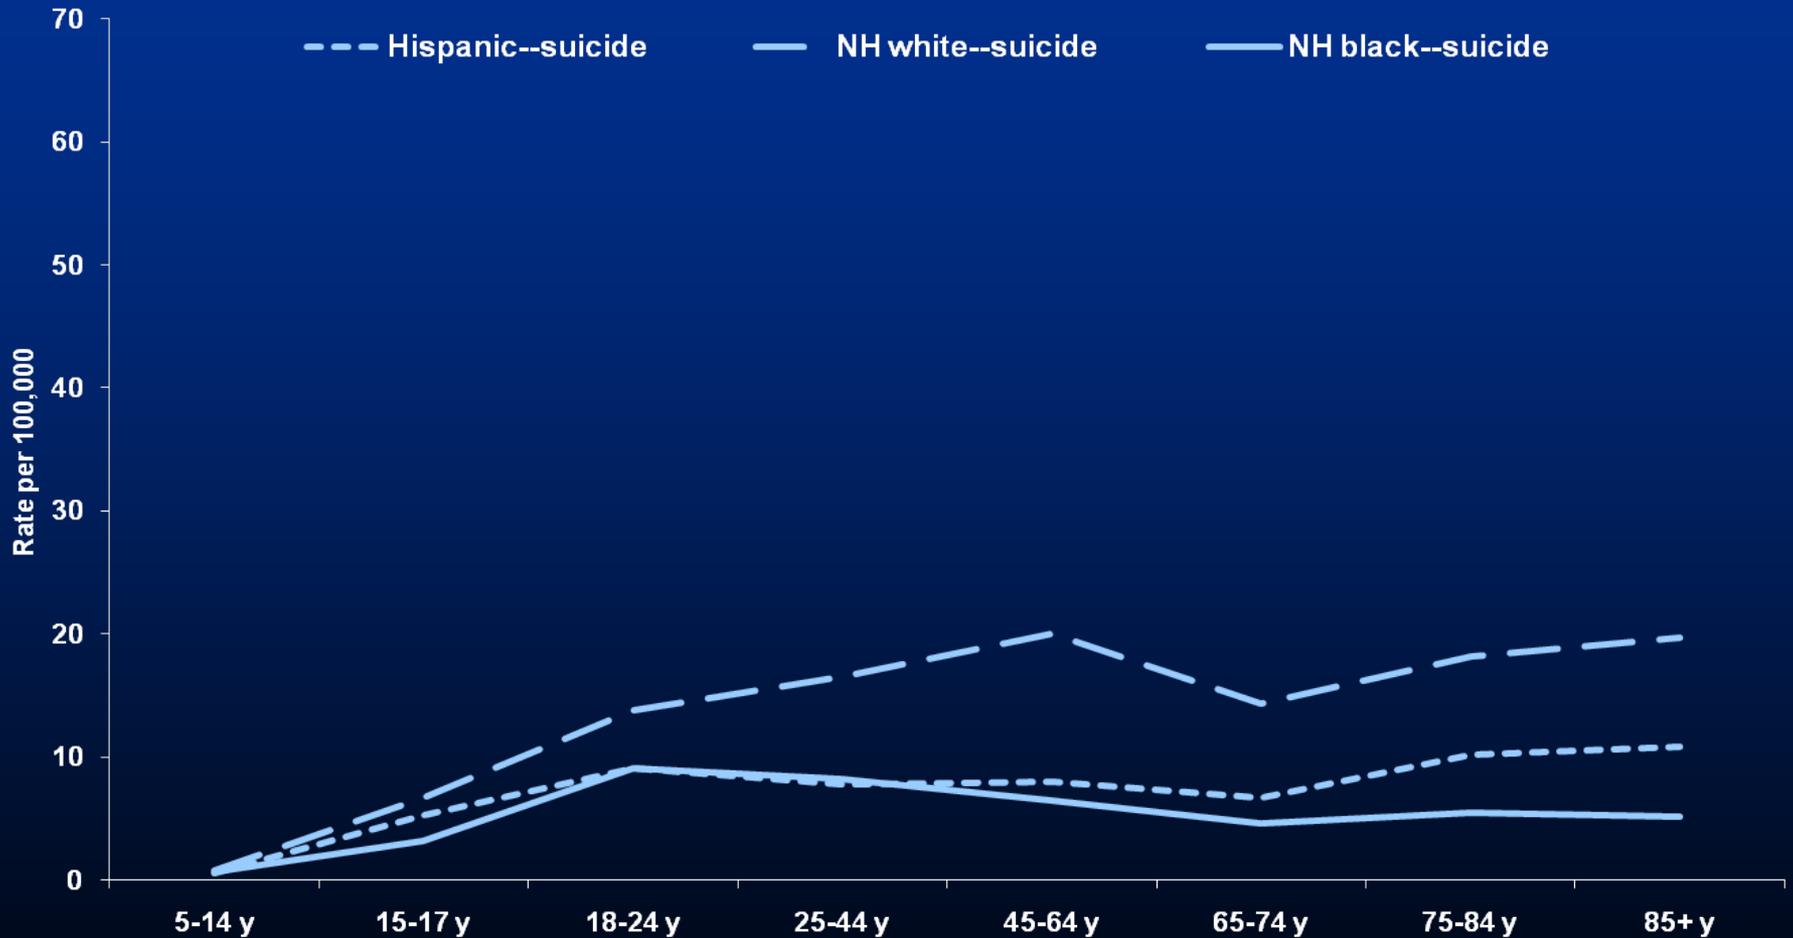

Looking more in depth at patterns by sex: Suicide per 100,000, by sex, age group and mechanism--United States, 2004-2006

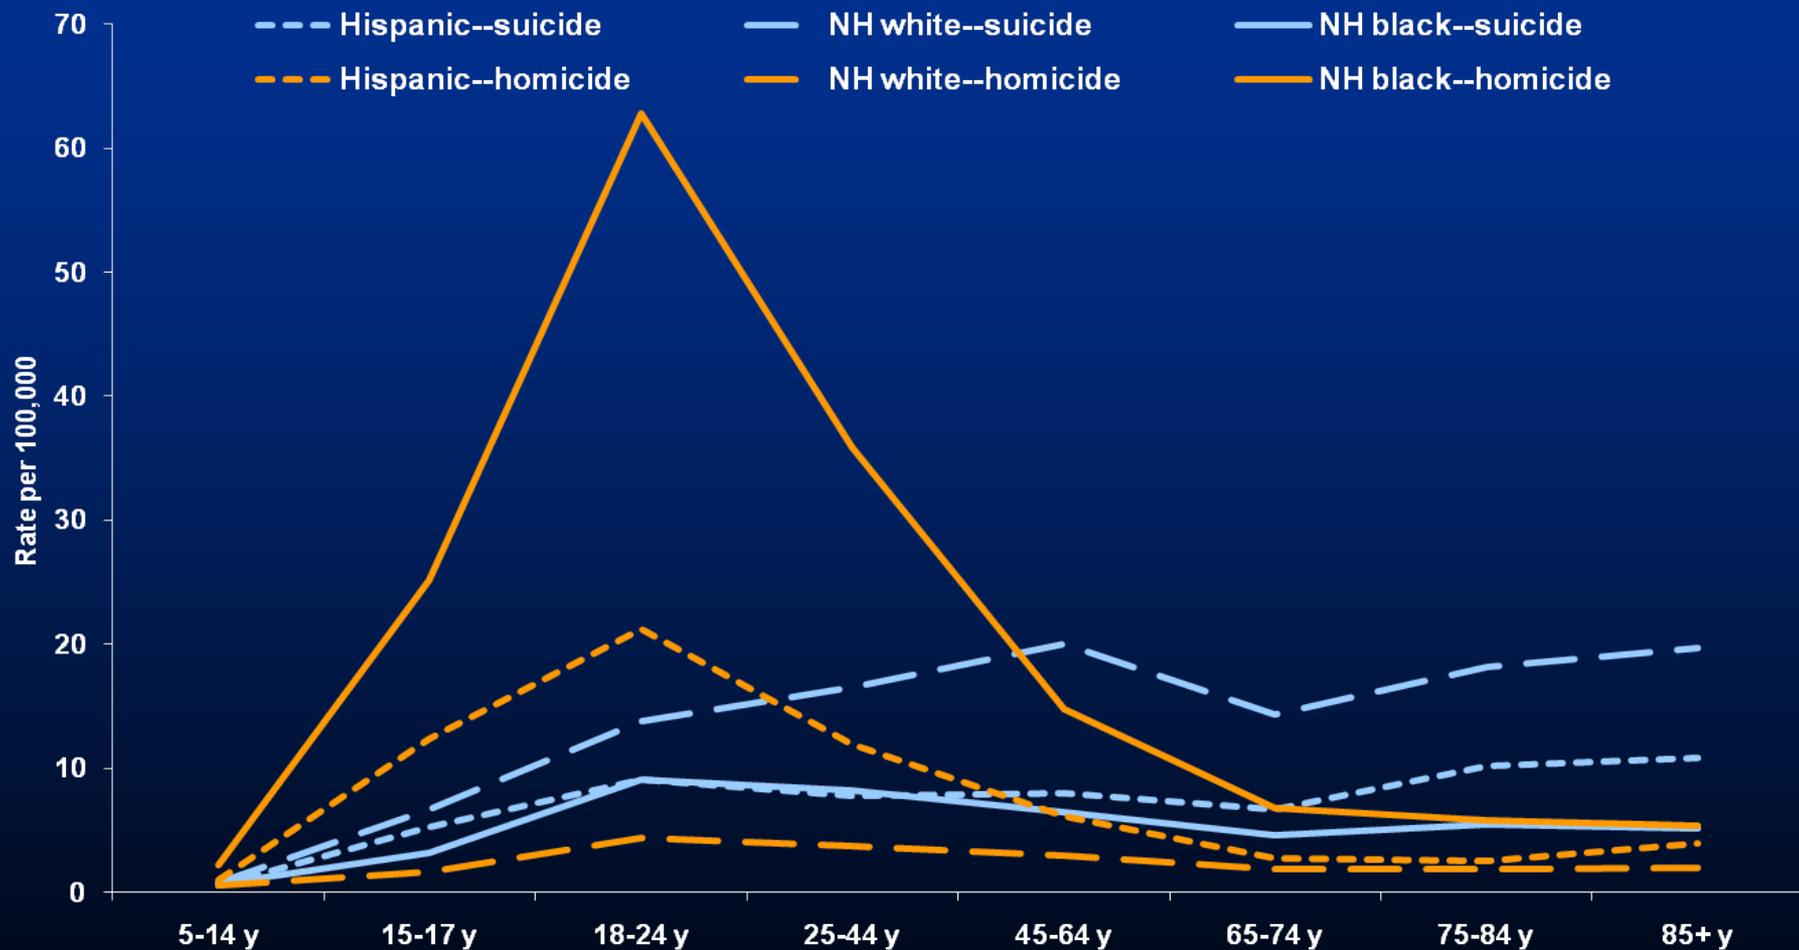

— Cut/pierce — Firearm — Poisoning — Suffocation

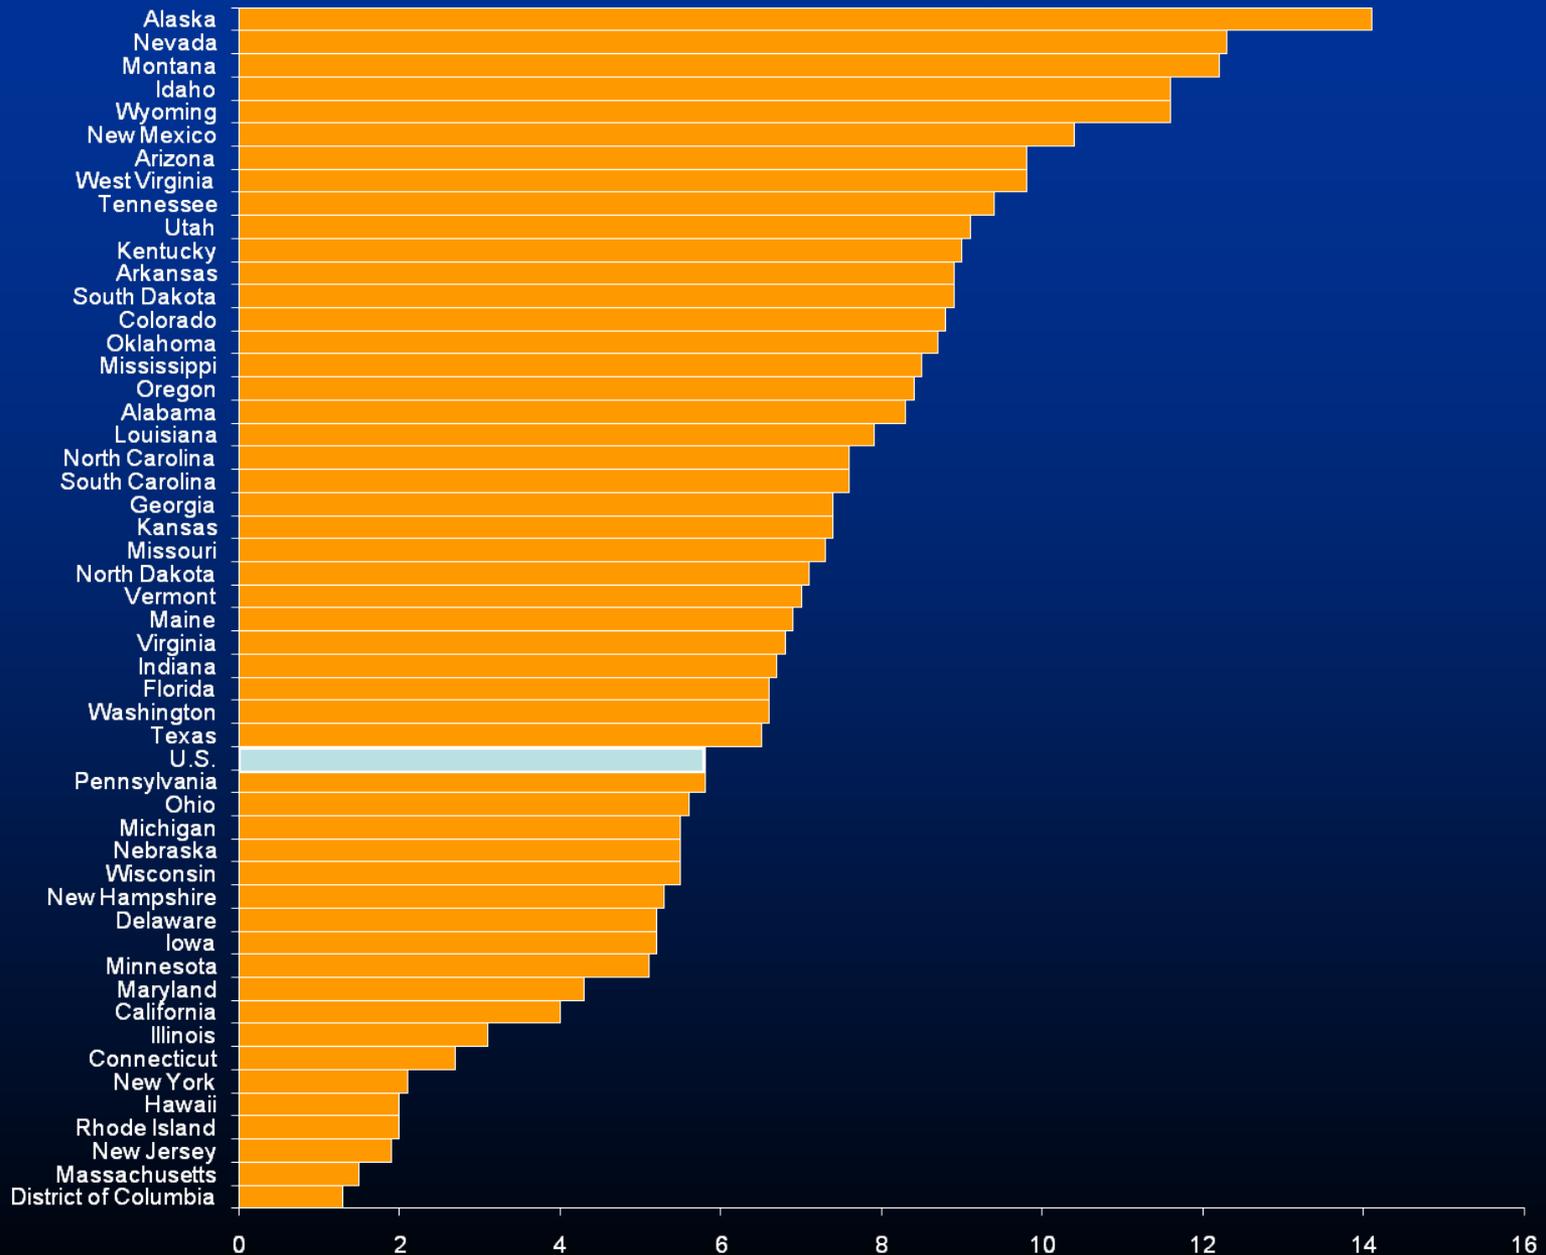

Another example of subgroup patterns: Suicide per 100,000, by race/ethnicity and age group-- United States, 2004-2006

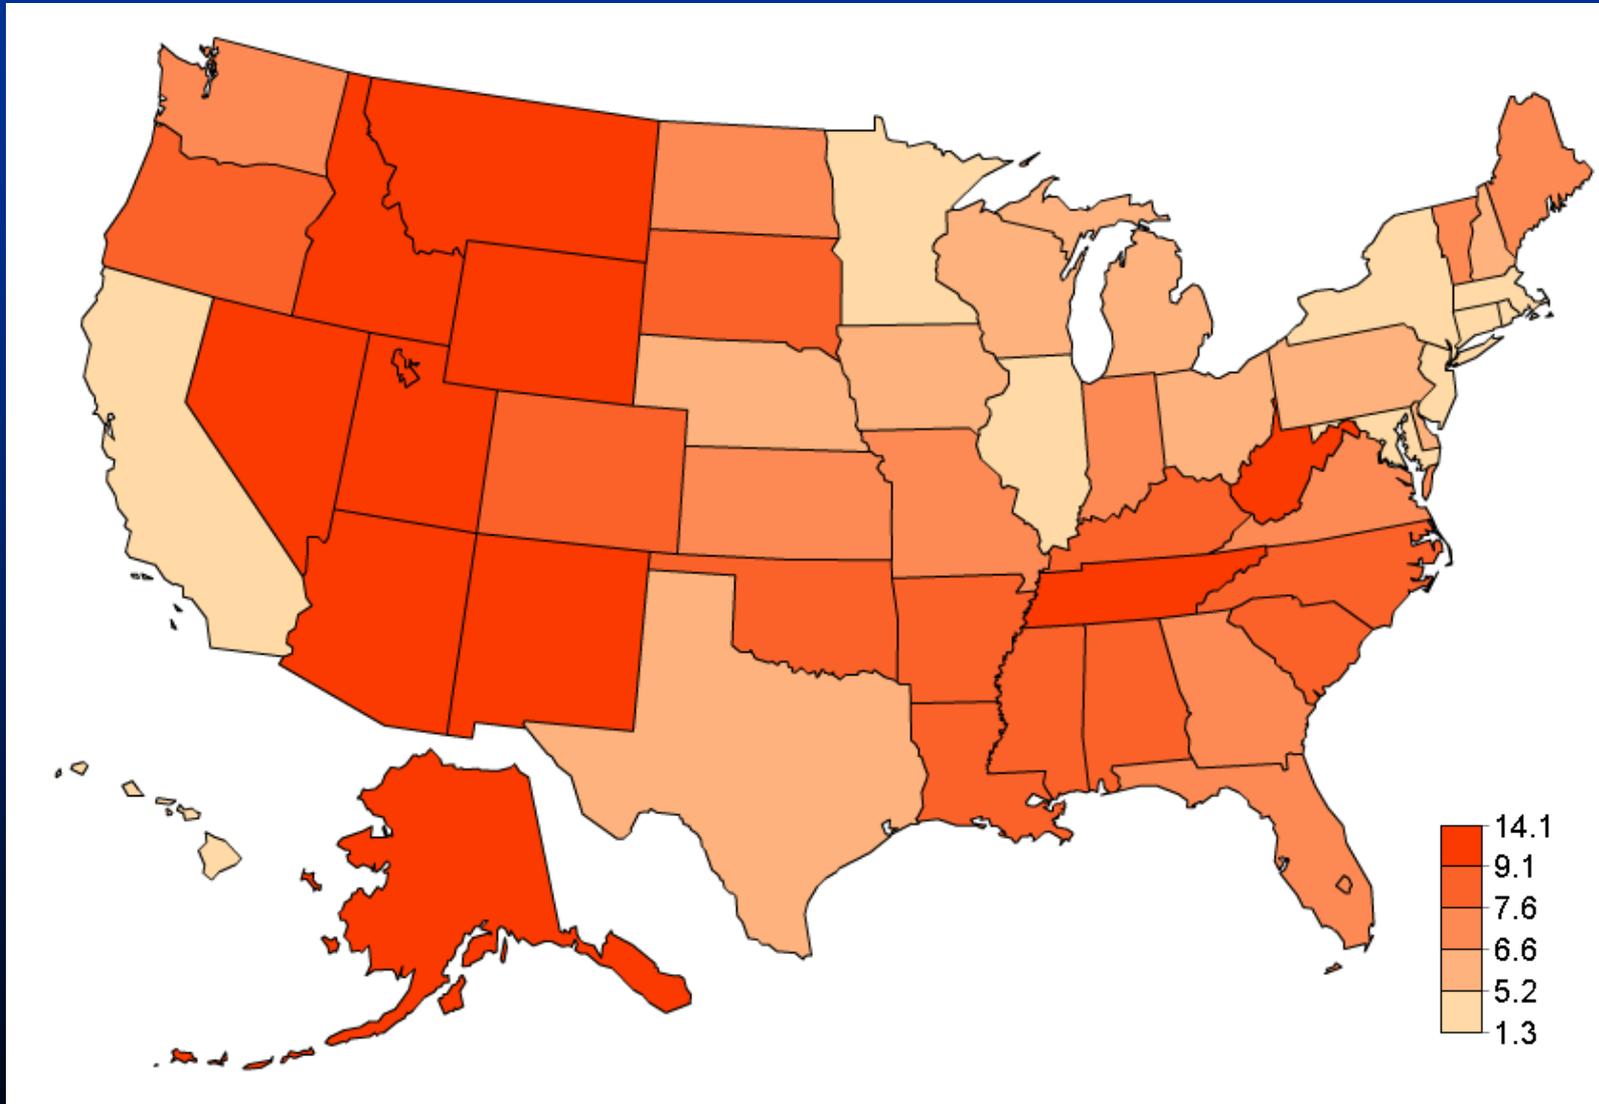

Comparing injury death intents: Suicide and homicide per 100,000, by race/ethnicity and age group--United States, 2004-2006

Looking at geographic detail: Suicide by firearm per 100,000 by state — 2004-2006

Another geographic perspective: Suicide by firearm per 100,000 by state — 2004-2006

Switching to examining emergency department use: Top 10 causes of emergency department visits, by age, 2005-2007

0-17 years	45-64 years	85+ years
Unintentional injury	Unintentional injury	Unintentional injury
Upper resp infection	Chest pain	Heart disease
Ear infection	Abdominal pain	Pneumonia
Fever	Spinal disorders	Urinary tract infection
Sore throat	Adverse effects of med tx	Chest pain
Abdominal pain	Cellulitis and abscess	Abdominal pain
Asthma	Heart disease	Stroke
Noninfectious enteritis	Rheumatism	Adverse effects of med tx
Adverse effects of med tx	COPD	Spinal disorders
Cellulitis and abscess	Alcohol and drug	COPD

Top 10 causes of emergency department visits, by age, 2005-2007

0-17 years	45-64 years	85+ years
Unintentional injury	Unintentional injury	Unintentional injury
Upper resp infection	Chest pain	Heart disease
Ear infection	Abdominal pain	Pneumonia
Fever	Spinal disorders	Urinary tract infection
Sore throat	Adverse effects of med tx	Chest pain
Abdominal pain	Cellulitis and abscess	Abdominal pain
Asthma	Heart disease	Stroke
Noninfectious enteritis	Rheumatism	Adverse effects of med tx
Adverse effects of med tx	COPD	Spinal disorders
Cellulitis and abscess	Alcohol and drug	COPD

Top 10 causes of emergency department visits, by age, 2005-2007

0-17 years	45-64 years	85+ years

Noninfectious enteritis	Rheumatism	Adverse effects of med tx
Adverse effects of med tx	COPD	Spinal disorders
Cellulitis and abscess	Alcohol and drug	COPD

Some overall considerations before showing the nuts and bolts of HDI

- Estimates may be single year or multiple-year, depending on the topic
 - Examples in the previous slides used three-year annual estimates
 - Pooled years yield greater precision (e.g., statistics on children)
 - Pooled years give the ability to show estimates for smaller population sub-groups
- Trend vs. detail
 - Some tables will have time trends, but less detailed covariates (and vice versa)
- Data suppression
 - Estimates with a relative standard error > 30% are suppressed (relative standard error = standard error ÷ estimate)
 - Estimates based on insufficient sample sizes are suppressed (depends on data source)

We will show how to...

- Find tables
- Manipulate interactive tables
 - Scroll through variables
 - Select variable categories to view
 - Sort
 - Move variables around and reset
- Read the metadata
- Create charts
- Create maps
- Print
- Export
- Download

Health Data Interactive

Welcome! Health Data Interactive presents tables with national health statistics for infants, children, adolescents, adults, and older adults. Tables can be customized by age, gender, race/ethnicity, and geographic location to explore different trends and patterns.

Table Topics

Health and functional status	Mortality and life expectancy
Health care use and expenditures	Pregnancy and birth
Health conditions	Risk factors and disease prevention
Health insurance and access

Injury mortality: US/State, 2001-2006 (Source:NVSS)

Title: Injury mortality: US/State, 2001-2006 (Source:NVSS)
Author: CDC/NCHS
Category: Mortality
Keywords: Injuries, assault, accident, intentional, self-harm, automobile, infant, toddler, child, adolescent, adult, vital statistics

Notes:

This table presents data on U.S. death rates and numbers of deaths from injury by intent and mechanism by age, sex, race/ethnicity and state. Rates are presented as three-year annual averages to obtain stable estimates.

ABOUT THE DATA SOURCE FOR THIS TABLE:

This table presents tabulations based on information reported on death certificates and on estimates of the resident population obtained from the U.S. Census Bureau.

In the United States, state laws require death certificates to be completed for all deaths, and Federal law mandates national collection and publication of deaths and other vital statistics data. The National Vital Statistics System, the Federal compilation of these data, is the result of the cooperation between the National Center for Health Statistics (NCHS) and the states to provide access to national statistical information from death certificates. For more information on mortality data from the National Vital Statistics System go to: <http://www.cdc.gov/nchs/deaths.htm>.

For the purpose of national mortality statistics, every death is attributed to one underlying condition based on information reported on the death certificate and utilizing the international rules for selecting the underlying cause of death from the reported conditions. The underlying cause is defined by the World Health Organization as "the disease or injury which initiated the train of events leading directly to death, or the circumstances of the accident or violence which produced the fatal injury." Beginning in 1999, the causes of death were coded using the Tenth Revision of the International Classification of Diseases (ICD-10). For more information see [International Classification of Diseases, Tenth Revision](#).

Injury deaths are classified by 1) mechanism and 2) intent:

1) For injury deaths, the mechanism or external cause rather than the injury diagnosis is always selected as the underlying cause of death because public health efforts are generally directed at preventing the incident that led to the death (e.g., motor vehicle traffic crash) rather than toward the injury diagnosis (e.g., skull fracture) that could result from a variety of external causes. The external cause of injury, or mechanism, of death is recorded by attending physicians, medical examiners, and coroners on death certificates filed in state vital statistics offices.

The external cause-of-injury mortality matrix is based on the underlying cause of death (see [ICD-10 Framework: External Cause of Injury Mortality Matrix](#).) The eight causes (mechanisms) shown in

Exporting and downloading points

- Exporting to Excel (for example)
 - What you see is what you get (allows you to manipulate a small data table in Excel)
 - Only displayed information is downloaded
 - To export the entire table, you must nest all the variable tiles in the table
 - Not all the metadata are exported
- Downloading
 - You must first download the “Browser” software
 - Downloading to your computer includes the whole table, not just what you see in the table view
 - Downloaded tables include metadata and mapping features
