

Measuring Healthy Life Expectancy for the U.S. Population in 2007-2009

Man-Huei Chang, MPH

*Division of Epidemiologic and Analytic Methods for Population Health (Proposed)
Epidemiology and Analysis Program Office
Centers for Disease Control and Prevention*

Presentation at the 2012 National Conference on Health Statistics
Washington, DC
August 8, 2012

Office of Surveillance, Epidemiology, and Laboratory Services
Epidemiology and Analysis Program Office

Outline

- ❑ Objectives
- ❑ Data and Methods
- ❑ Results
- ❑ Conclusions

CDC Reporting Population Summary Measures

- ❑ In 1982, Hahn et al. published YPLL-65 and suggested alternative measures (e.g., DALY, QALY, YHL, YAAL, and HLE)
- ❑ CDC published Years of Potential Life Lost before age 65 (YPLL-65) and leading causes of death in MMWR 1982-1993
- ❑ In 2000, a CDC Burden of Disease Workgroup recommended routinely reporting summary measures in MMWR
- ❑ In December 2010, the Epidemiology and Analysis Program Office (EAPO) began working on HLE to monitor trends and disparities
 - EAPO and NCHS collaborative effort
 - Regular reporting of summary measures
- ❑ Goals
 - To promote public awareness of 'premature', 'preventable', and 'unnecessary' mortality; and
 - To develop and implement effective interventions for good health and longevity

Objectives

- ❑ **To estimate HLE for the U.S population and for smaller population subgroups**
- ❑ **To assess disparities in HLE between different segments of the U.S. population**

Data Sources

- ❑ **Data: 2007-2009**
- ❑ **Mortality rates (NCHS Vital Statistics System)**
- ❑ **Self-reported health status rates**
 - NHIS (national, regional, divisional)
 - BRFSS (state-level)
- ❑ **Population segments**
 - Total population (national)
 - 4 regions
 - 9 divisions
 - 50 states and the District of Columbia
- ❑ **Demographic subgroups**
 - Age groups (5-year age intervals), sex, race (whites, blacks), and ethnicity (Hispanics, non-Hispanics)

Health Status Data

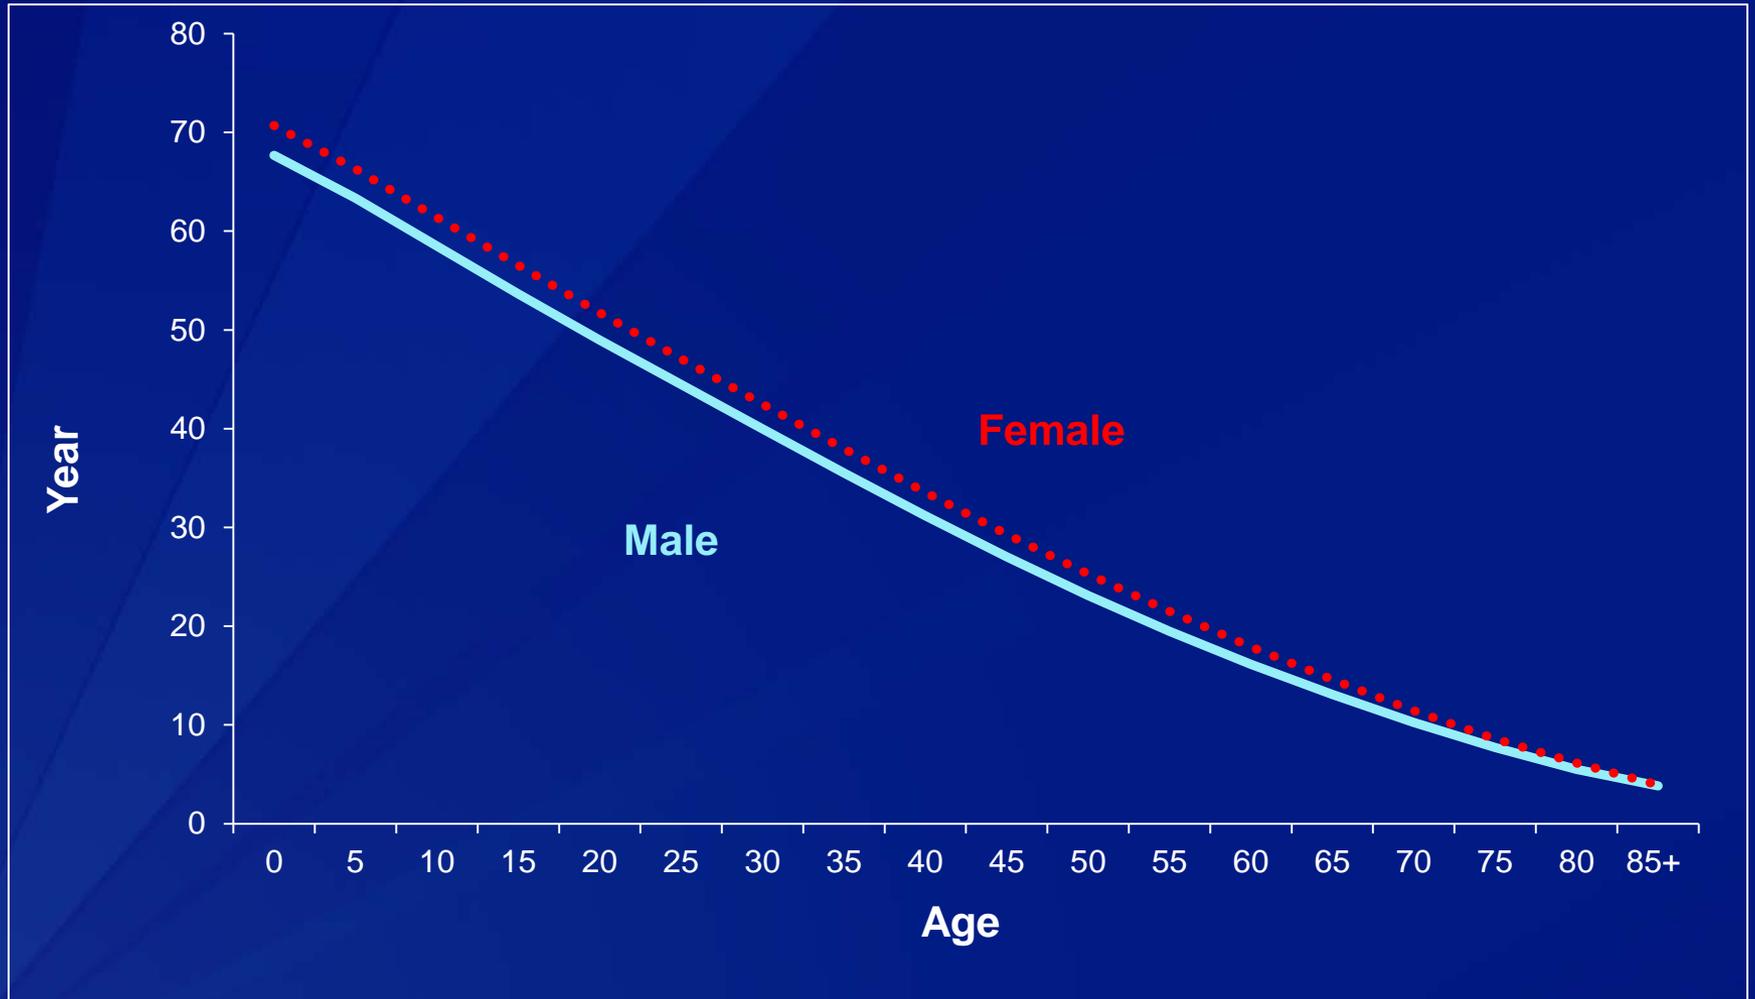

□ NHIS question on self-assessed health status:

“Would you say your health in general is excellent, very good, good, fair, or poor?”

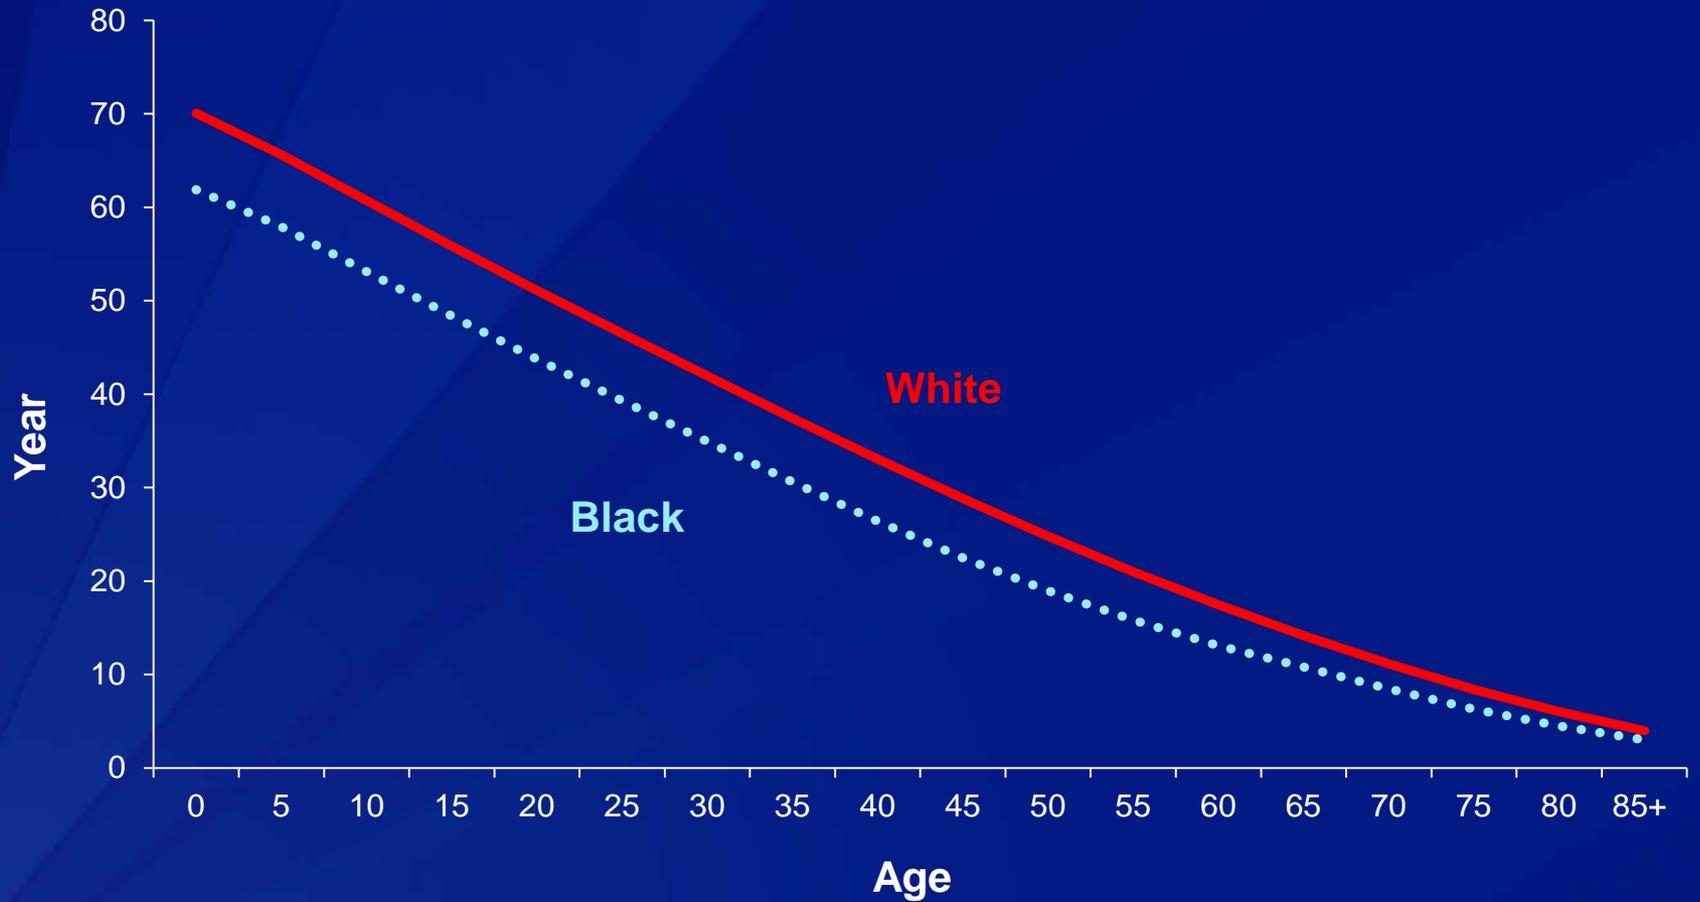

- 1 Excellent
 - 2 Very good
 - 3 Good
 - 4 Fair
 - 5 Poor
 - 7 Refused
 - 9 Don't know
-
- Healthy
- Unhealthy

□ BRFSS question is the same as NHIS

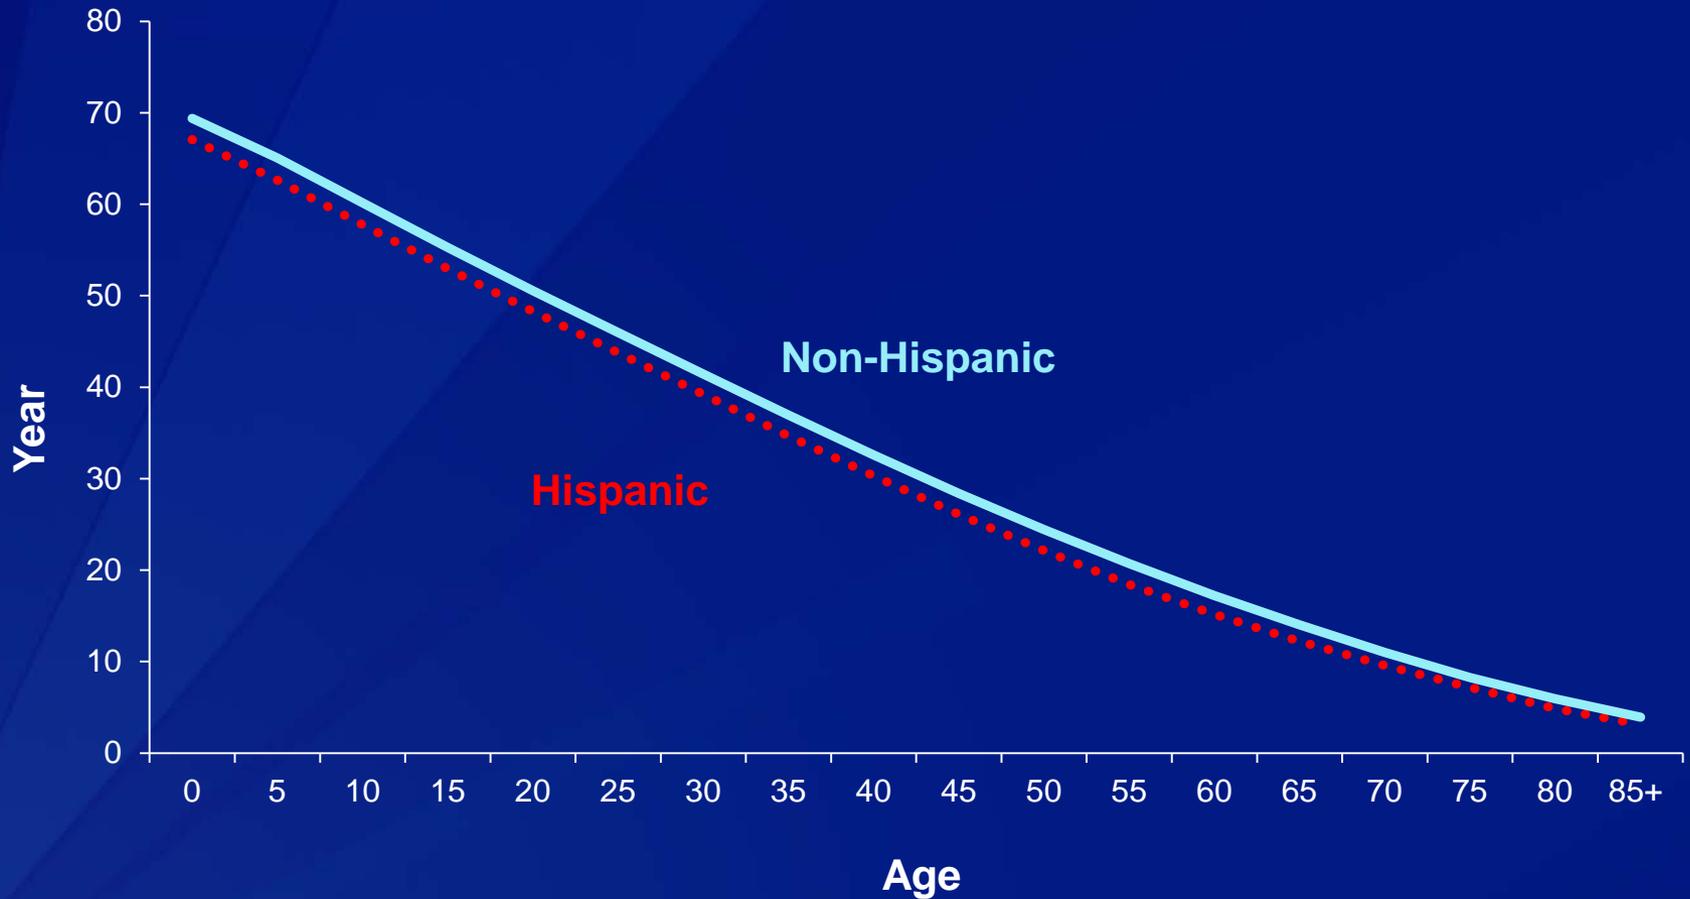

HLE by Age and Sex – U.S. 2007-2009

HLE by Age and Race – U.S. 2007-2009

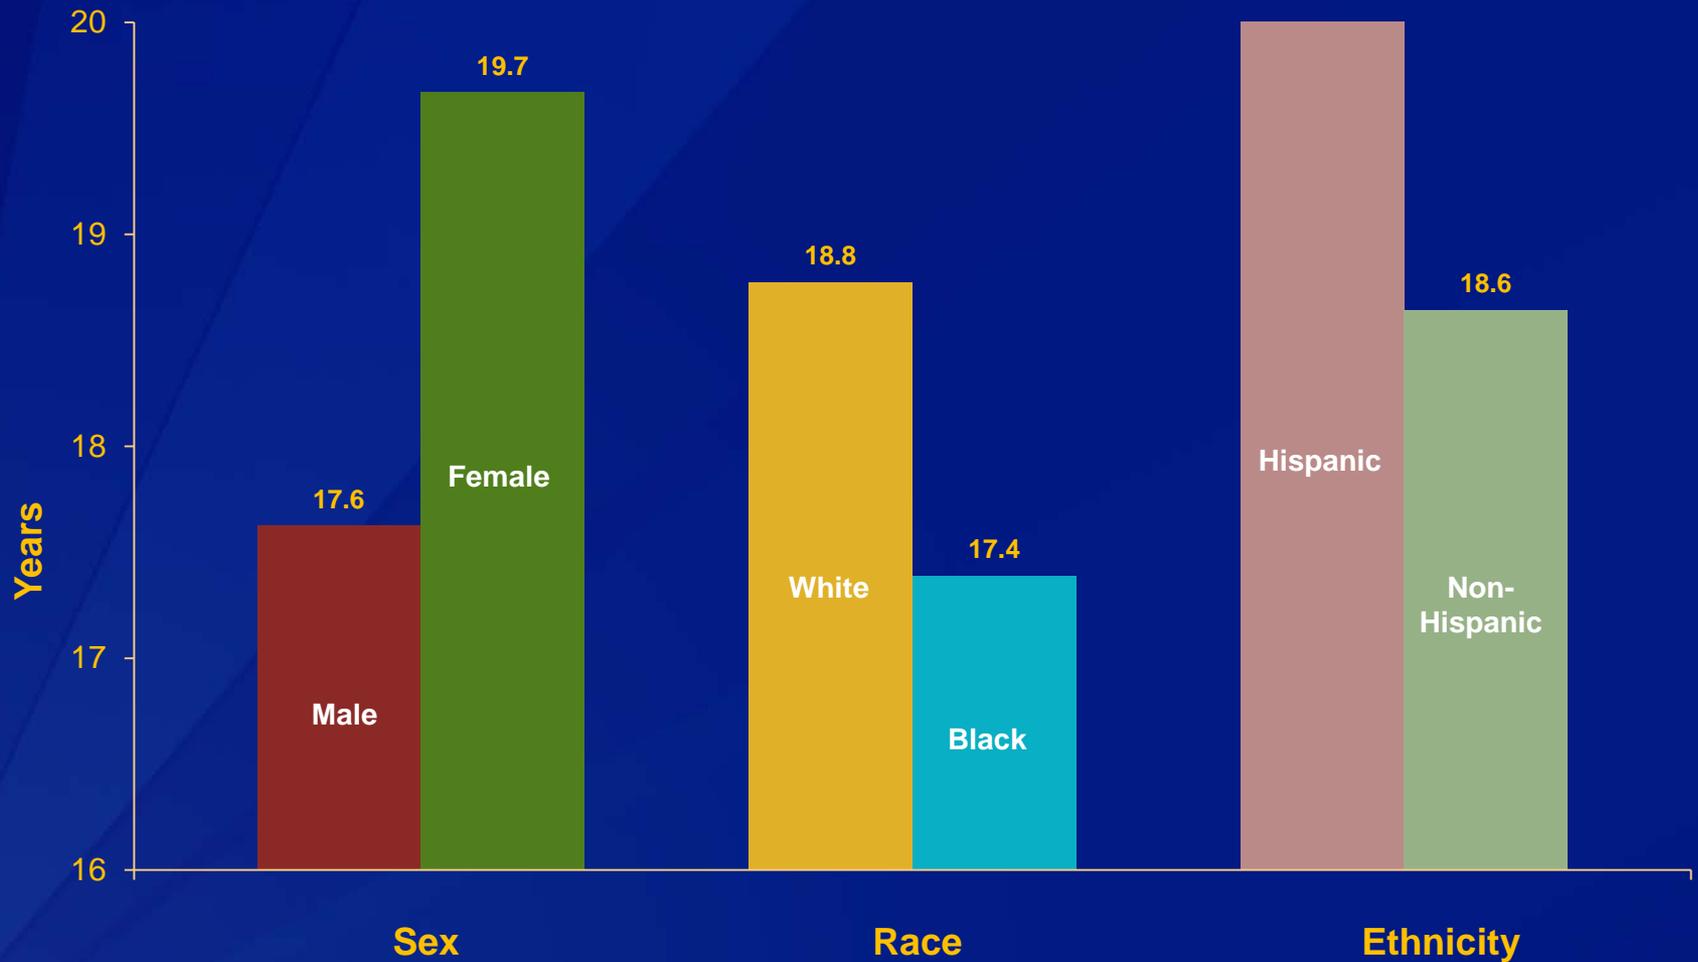

HLE by Age and Ethnicity - U.S. 2007-2009

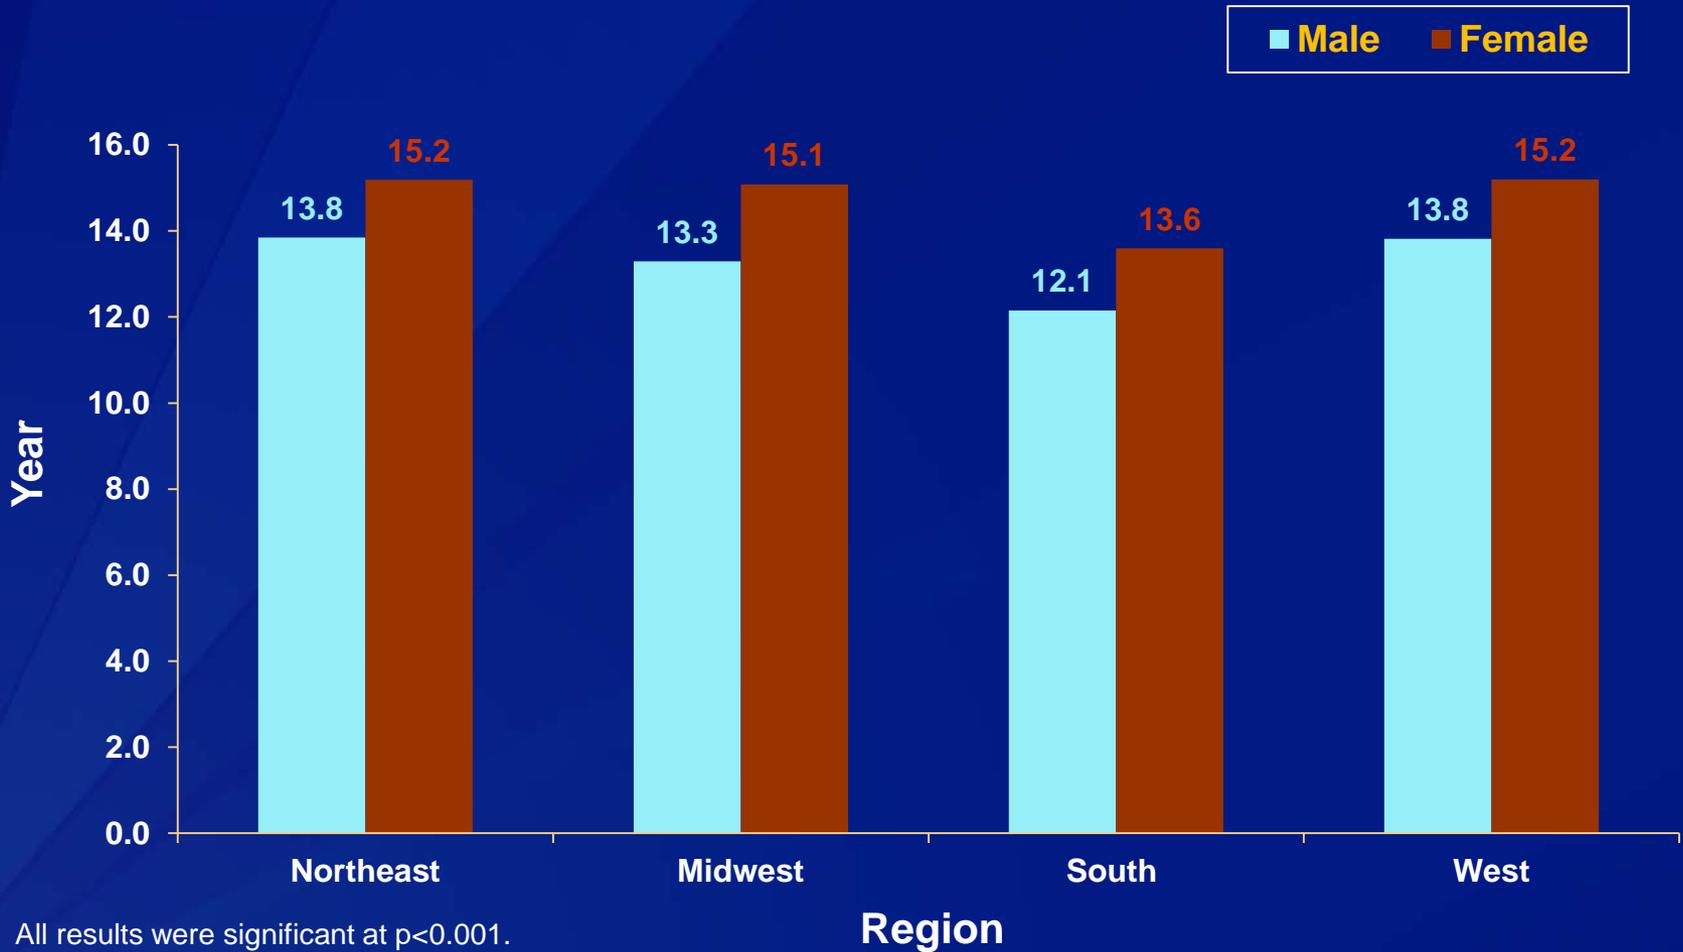

LE by Selected Demographics - U.S. 2007-2009 at Birth

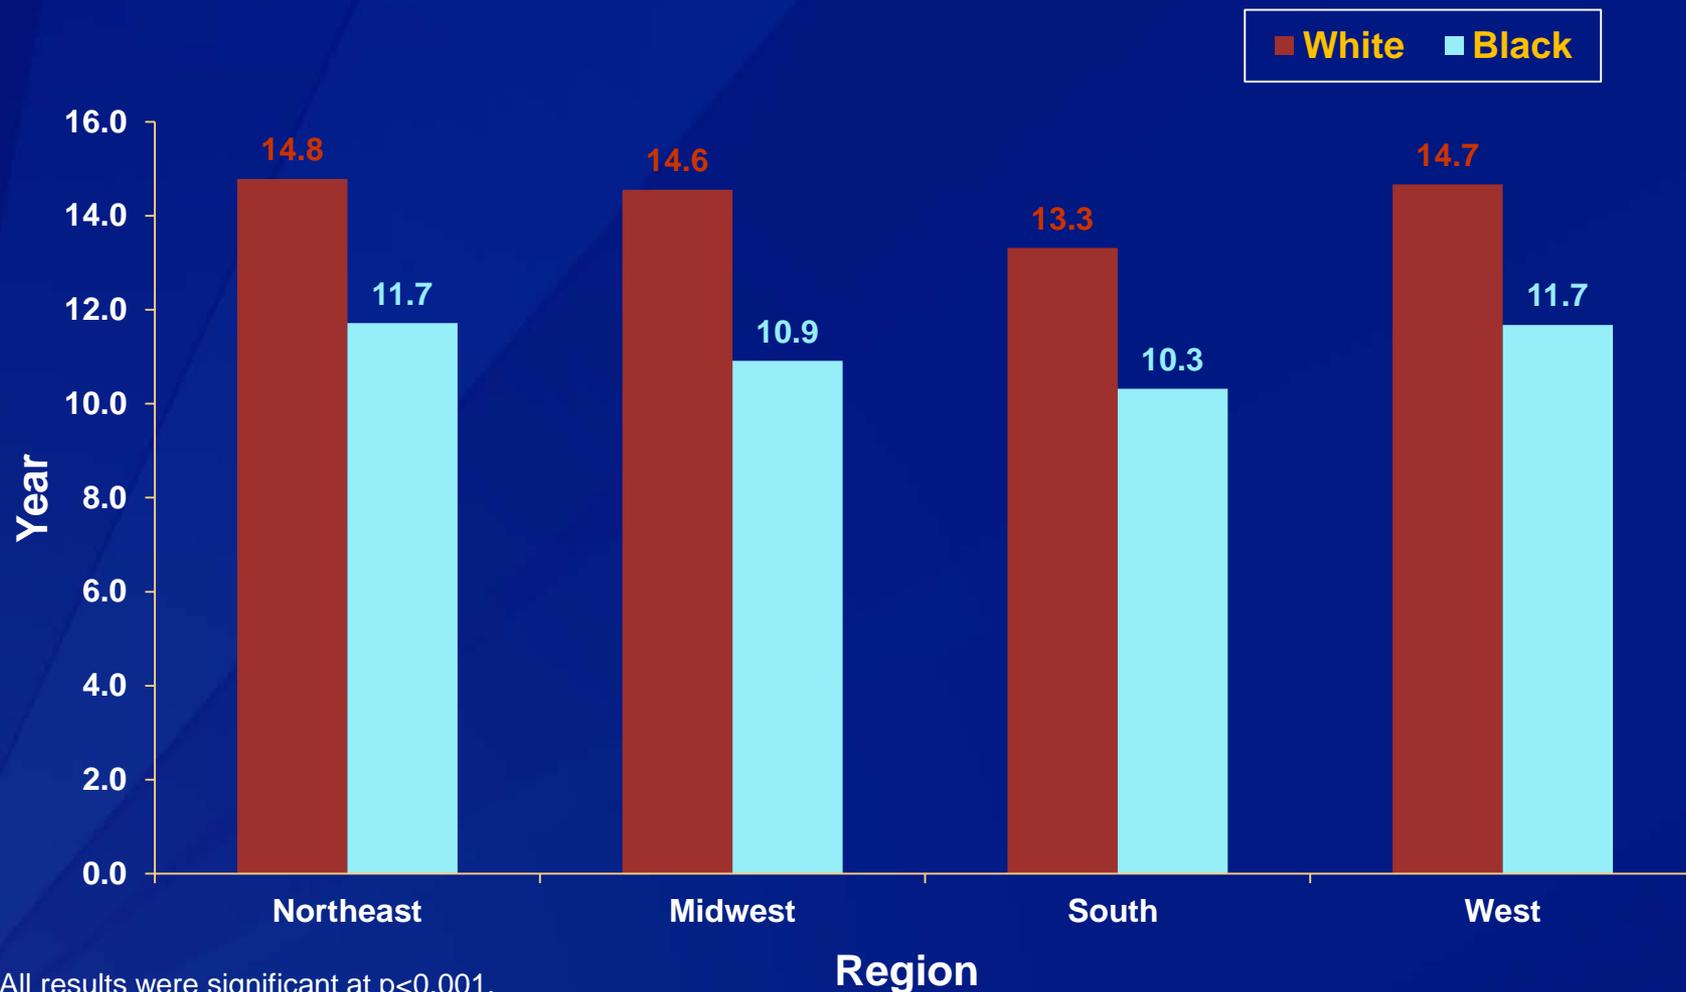

LE by Selected Demographics - U.S. 2007-2009 at Age 65

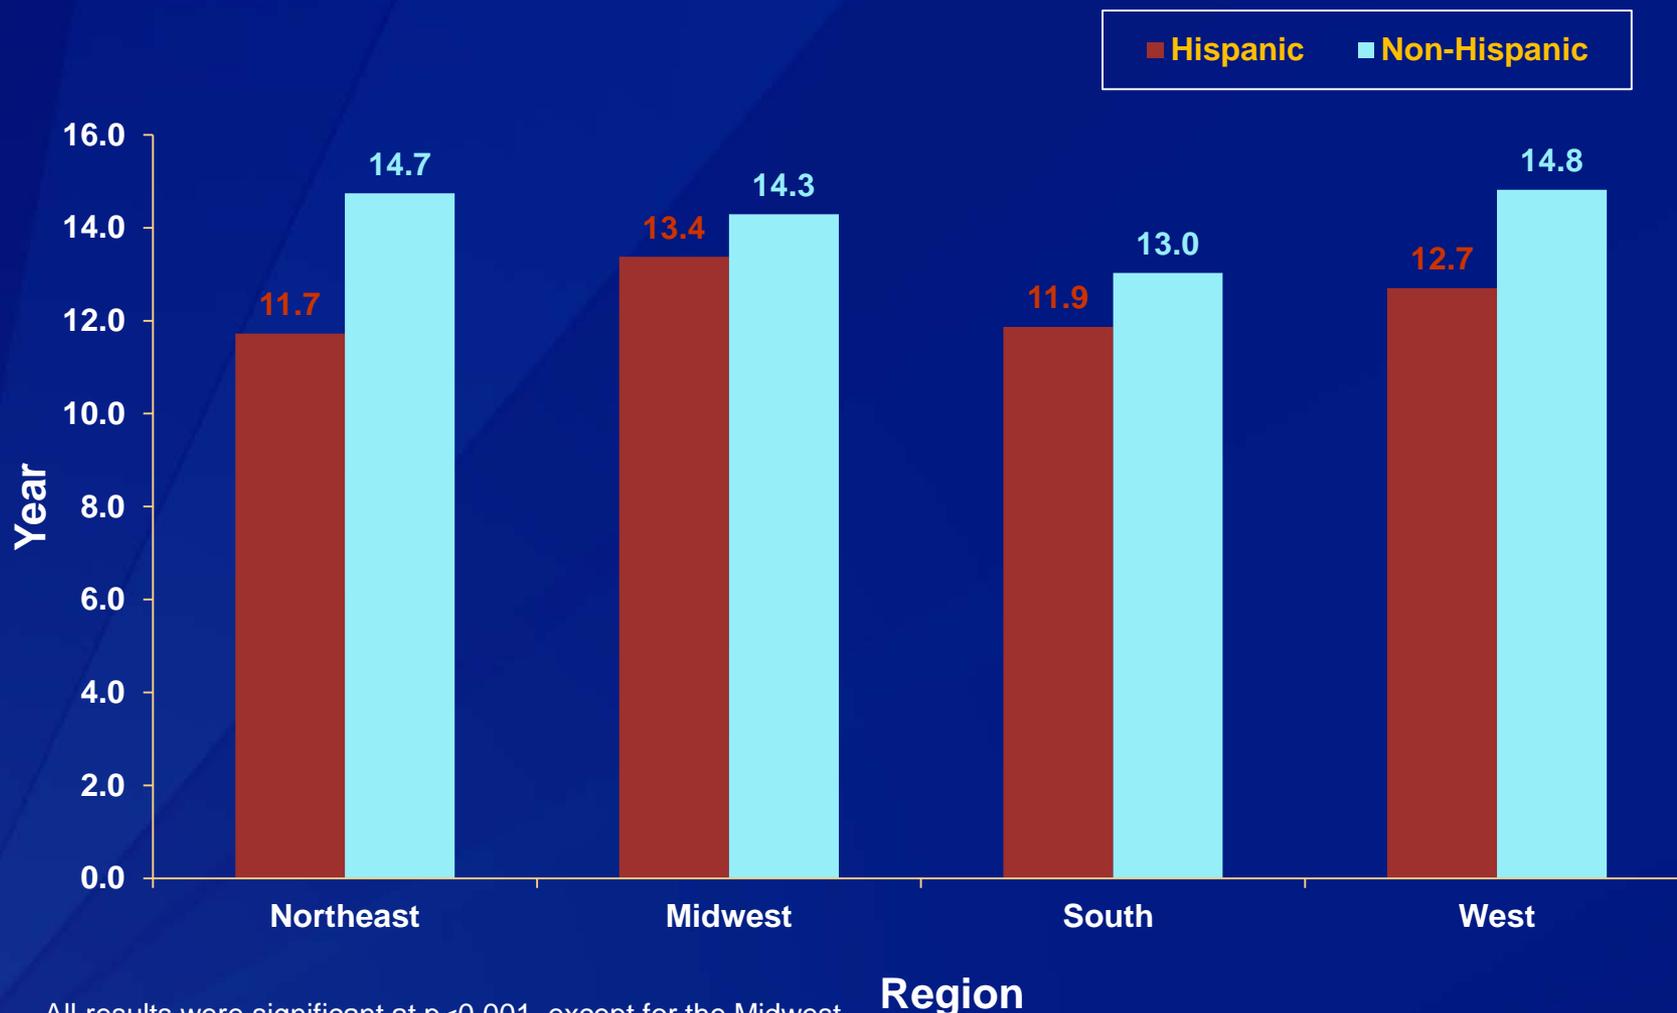

HLE at Age 65 by Sex and Region - U.S. 2007-2009

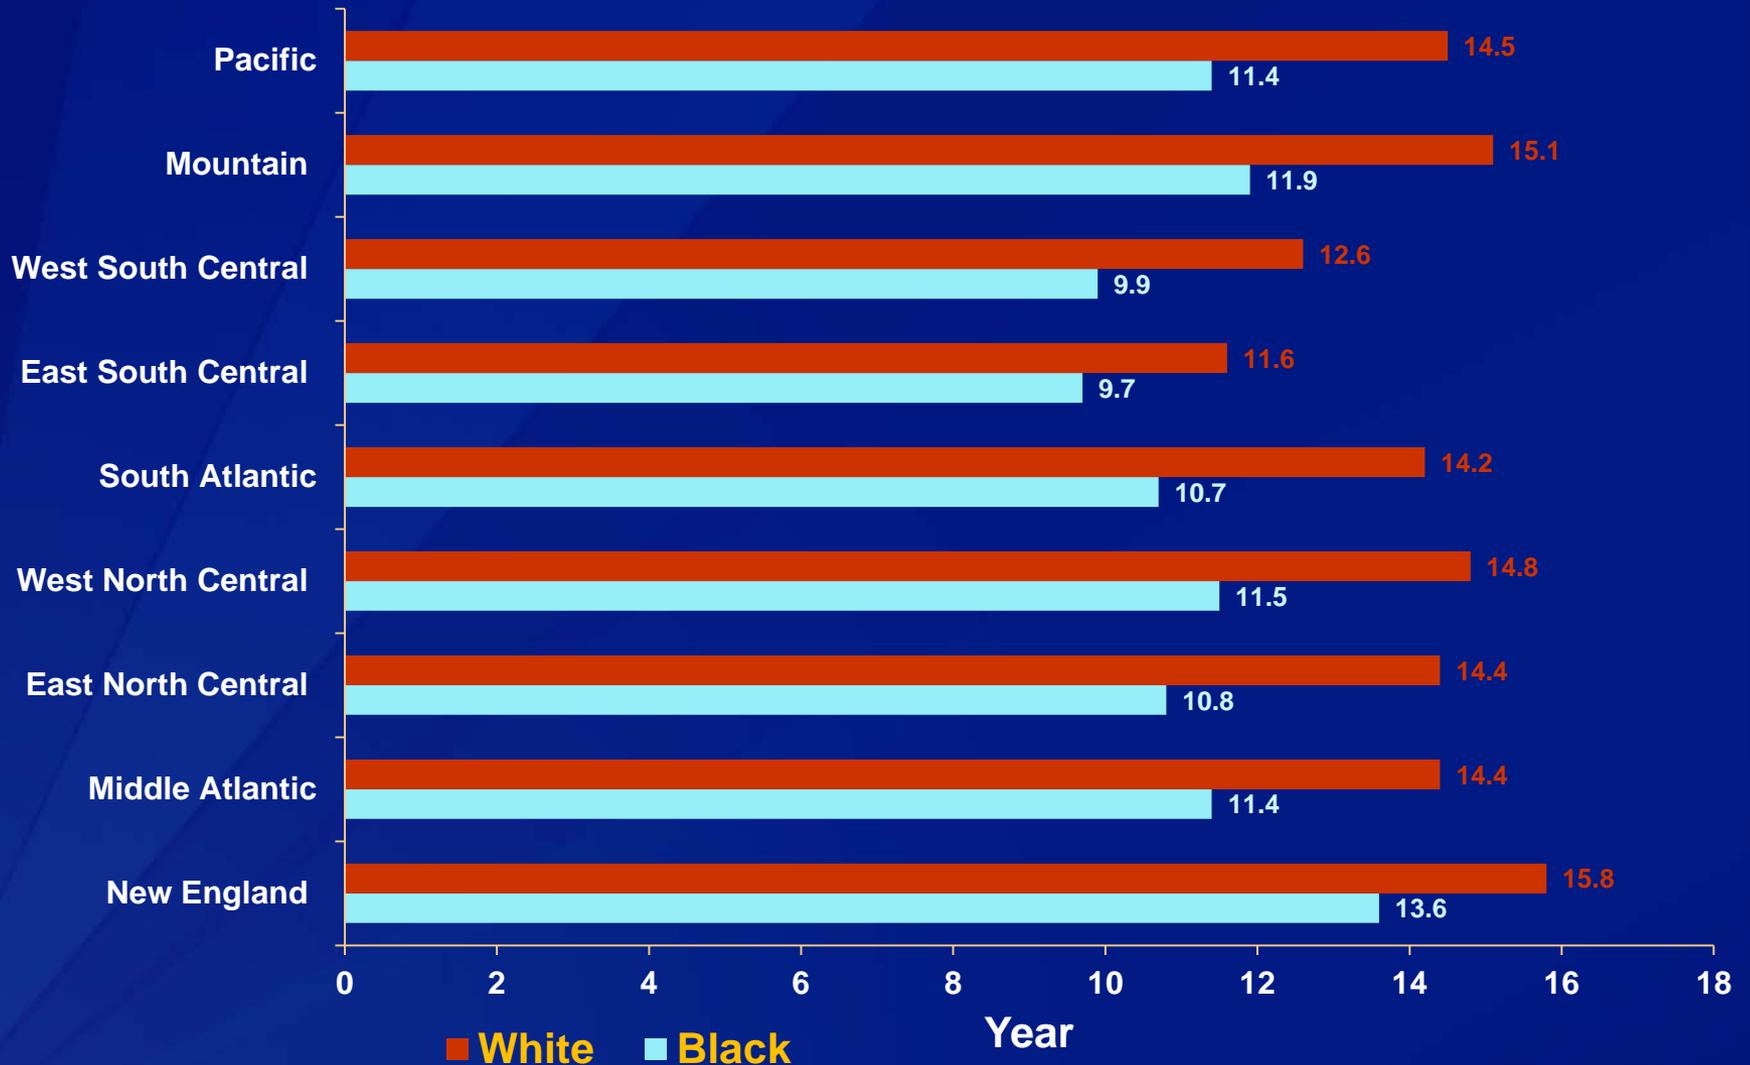

HLE at Age 65 by Race and Region - U.S. 2007-2009

HLE at Age 65 by Ethnicity and Region - U.S. 2007-2009

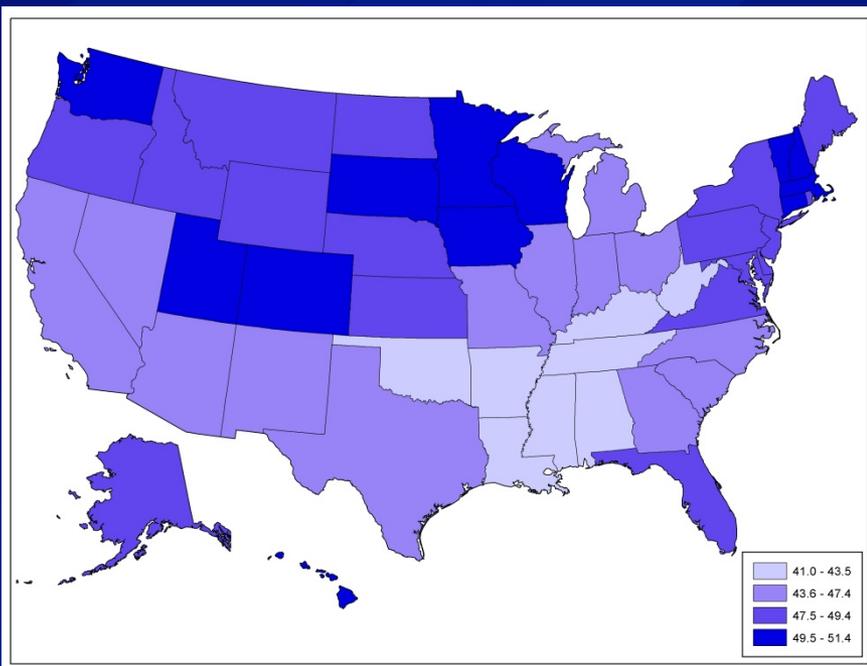

HLE at Age 65 by Race and Division - U.S. 2007-2009

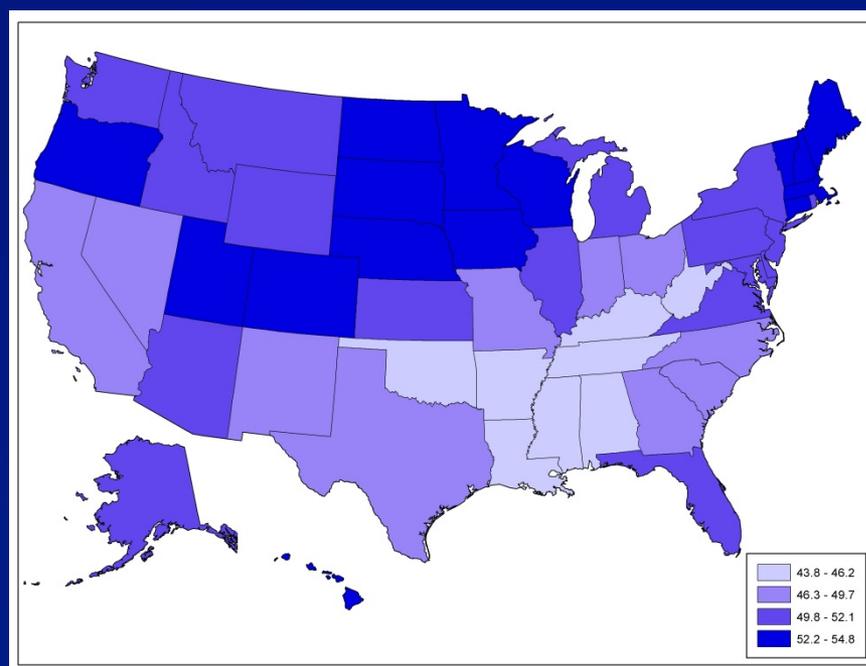

State-Specific HLE at Age 20 U.S. Adults, 2007-2009

Male

US average: 49.0

Female

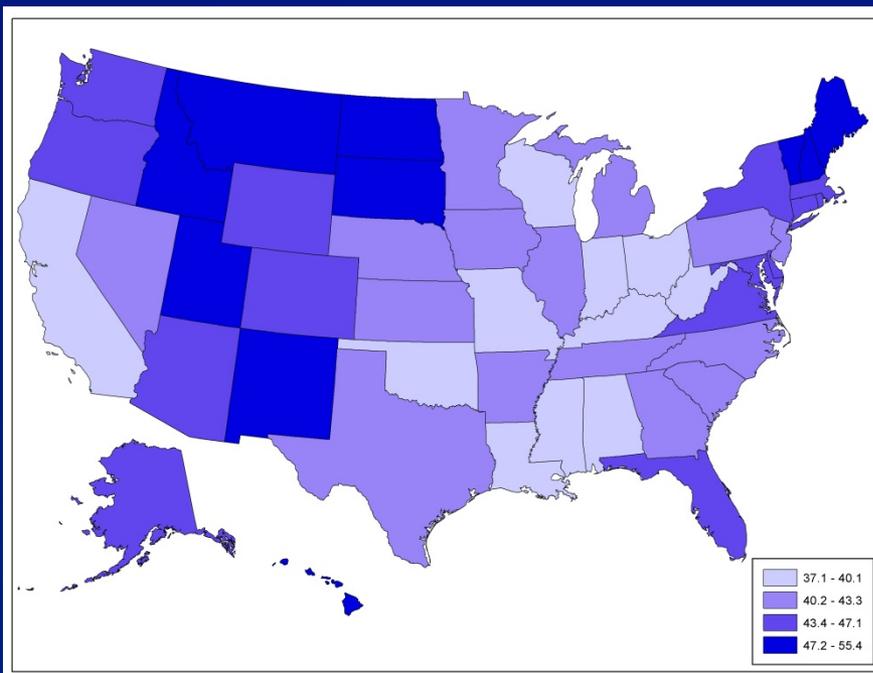

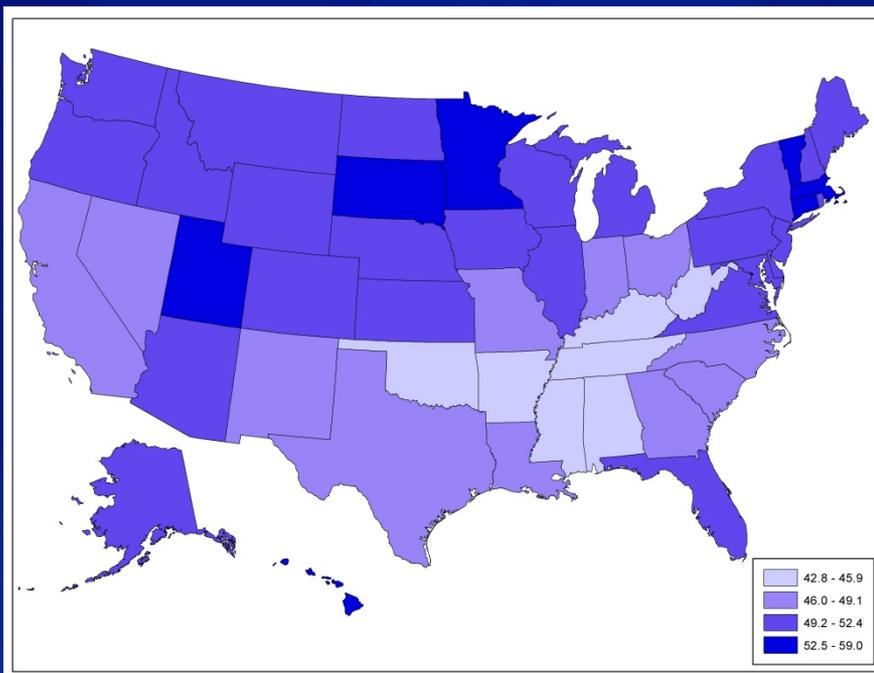

US average: 51.8

State-Specific HLE at Age 20 U.S. Adults, 2007-2009

White

Black

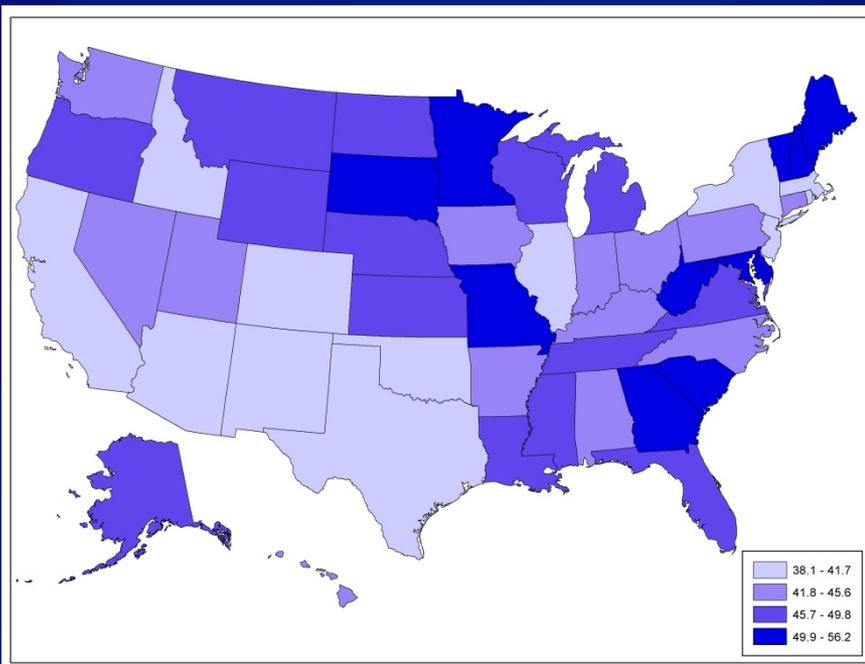

US average: 51.1

US average: 43.7

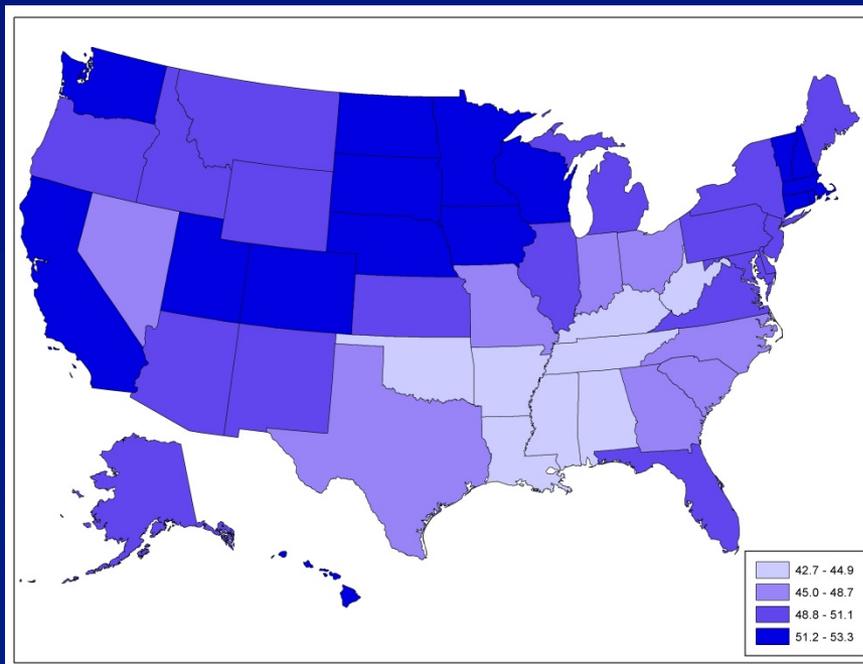

State-Specific HLE at Age 20 U.S. Adults, 2007-2009

Hispanic

US average: 48.3

Non-Hispanic

US average: 50.6

Significant Disparities in HLE

Age	All Races				Race				Ethnicity			
	Male	Female	Disparities		White	Black	Disparities		Hispanic	Non-Hispanic	Disparities	
			Δ in HLE	p-value			Δ in HLE	p-value			Δ in HLE	p-value
0-4	67.7	70.7	3.0	<0.001	70.1	61.9	8.2	<0.001	67.1	69.4	2.3	<0.001

SOURCES: CDC/NCHS, National Vital Statistics System, National Health Interview Survey, and the U.S. Census Bureau.

Summary

- ❑ Disparities in HLE and LE observed among population segments and geographical locations
- ❑ Differences in HLE among subpopulations result from the combined effects of mortality and morbidity (impacted by demographic, socioeconomic, and environmental factors)
- ❑ Use HLE to compare the health of populations, monitor trends in the health of a population, and identify health inequalities within populations

Conclusions

- ❑ HLE can be readily used by public health officials, healthcare providers, and policy makers to understand the health status of populations
- ❑ These results can be used as baseline to routinely monitor the health of the U.S. population and to identify health disparities in populations
