

# **How to Import Patient Safety Procedure Data**

#### March 2014

Division of Healthcare Quality Promotion

# **Objectives**

- Describe the options for importing data into NHSN
- Review specifications for .csv file and steps for importing
- Discuss helpful tips for a successful import
- Illustrate the use of NHSN Analysis Output Options for data quality

# **Options for Importing**

Selected event and associated denominators can be imported using the Clinical Document Architecture (CDA) function; files created by an infection control software vendor.

Import procedures and surgeons into NHSN using a comma delimited ASCII file created by the facility.

The person importing these data must be a user of NHSN.

# Import via CDA

Clinical Document Architecture (CDA) is a Health Level 7 (HL7) standard which provides framework for format of electronic documents. NHSN has been enabled to accept electronic infection reports, denominator data, and process of care data from commercial infection surveillance systems.

To implement CDA for NHSN, facilities should contact their Infection Control Software vendor to inquire about the availability of generating CDA events records for importation into NHSN.

# Import via CDA

- Before using the NHSN Import Data function, CDA zip files must be generated that contain the event and/or denominator records to be imported.
- In most cases, this file can be generated using an Export function provided by the Infection Control software used at the facility.
- For details on generating the CDA zip files, facilities should consult with their Infection Control software vendor representative.
- More information is available at: <u>http://www.cdc.gov/nhsn/CDA/index.html</u>

# **Options for Importing**

Select event and associated denominators can be imported using the Clinical Document Architecture (CDA) function; files created by an infection control software vendor.

Import procedures and surgeons into NHSN using a comma delimited ASCII file (.txt or .csv) created by the facility. [will refer to this as the ".csv Import"]

The person importing these data must be a user of NHSN.

- NHSN will allow importation of procedure data in an ASCII comma delimited .txt or .csv file format.
- Can be generated from different external sources, such as databases or hospital information systems.
- Will need assistance of OR and/or IT staff.

ICD-9 Mapping Tool for HPRO and KPRO

#### 🔀 [PDF - 71KB] February 2014

This is an update to the Mapping Tool guidance that was sent out last week for those NHSN users who are following HPRO – hip Arthroplasty and KPRO – Knee Arthroplasty in their monthly surveillance plan. We realized there is a defect in the NHSN system that will cause an error message with the mapping tool we provided. This update addresses how to work around this issue.

# .csv File Specifications

Importing Patient Safety Procedure Data

NHSN v8.1 January 2014

# **Importing Patient Safety Procedure Data**

NOTE: The procedure import file specifications contained in this document will be implemented in NHSN version 8.1, planned for late-January 2014. Facilities will not be able to import procedure data according to these specifications prior to that time. For current procedure import file specifications, please visit: <u>http://www.cdc.gov/nhsn/PDFs/ImportingProcedureData\_current.pdf</u>

NHSN will allow importation of procedure data in an ASCII comma delimited text file format. You can generate the import files from different external sources, such as databases or hospital information systems. The default import option allows the importation of procedures where the procedure date occurs in a month for which a Monthly Reporting Plan exists and the Plan specifies the procedure code in the import file record. If you wish to import records for procedures not in the Plan, you must specify which procedures to include. Custom procedures can also be imported if they are first created on the custom options page.

#### NOTES:

- Data in the import file <u>must</u> be in the same order as described in the table below, <u>not</u> as they appear on the Denominator for Procedure form.
- 2. The comma delimited text file format defined in the below table requires commas

# .csv File Specifications

- Procedure data that are imported must follow the NHSN file specifications.
   Be sure to pay special attention to the notes!
  - Data in the import file <u>must</u> be in same order described in specifications document.

Importing Patient Safety Procedure Data

#### Importing Patient Safety Procedure Data

NHSN v8.1 January 2014

NOTE: The procedure import file specifications contained in this document will be implemented in NHSN version 8.1, planned for late-January 2014. Facilities will not be able to import procedure data according to these specifications prior to that time. For current procedure import file specifications, please visit: http://www.cdc.gov/nhsn/PDFs/ImportingProcedureData\_current.pdf

NHSN will allow importation of procedure data in an ASCII comma delimited text file format. You can generate the import files from different external sources, such as databases or hospital information systems. The default import option allows the importation of procedures where the procedure date occurs in a month for which a Monthly Reporting Plan exists and the Plan specifies the procedure code in the import file record. If you wish to import records for procedures not in the Plan, you must specify which procedures to include. Custom procedures can also be imported if they are first created on the custom options page.

#### NOTES

- Data in the import file <u>must</u> be in the same order as described in the table below, <u>not</u> as they appear on the Denominator for Procedure form.
- The comma delimited text file format defined in the below table requires commas between fields even if no data values exist (e.g., optional or empty fields).
- 3. If a bilateral procedure is performed, two procedure records are required. Refer to the NHSN Procedure Codes table for a list of procedures that can be bilateral.
- There should be a unique duration for each bilateral procedure. If only one total time is available for both procedures, estimate the duration for each or split the time evenly between them.
- 5. For procedures, if Outpatient = Y, then the procedure must be one of those listed in the NHSN Procedure Codes table as an Outpatient Procedure.
- If you are importing Surgeon Code, all surgeon codes must be set-up in NHSN prior to importing.
- If you are importing custom fields, all custom fields must be set up in NHSN prior to importing data in these fields.
- If the optional Procedure Comment field has text that contains commas you must place a double quote at the beginning and end of the string of text (e.g., "with allograft, dowels, plates").
- When creating comma delimited files, be careful to exclude non-printable characters as they may actually cause the data to be improperly imported and result in errors.
- 10. You must delete the header line from the CSV file prior to importing the data. 11. Data must be entered in all fields marked as "Required" for both in plan and off plan

procedure records. Fields marked as "Optional for Import" allow an incomplete

http://www.cdc.gov/nhsn/PDFs/ImportingProcedureData\_current.pdf

NHSN Procedure Import File Format\*\*:

Field	Required/ Optional	Values	Format
Patient ID	Required		Character Length 15
Gender	Required	M- Male F - Female	Character Length 1
Date of Birth	Required		mm/dd/yyyy
NHSN Procedure Code	Required	See NHSN procedure codes	Character Length 5
Date of Procedure	Required		mm/dd/yyyy
Outpatient	Required	Y - Yes N - No Note: Some procedures may only be inpatient or outpatient. See NHSN procedure codes below.	Character Length 1
Duration Hours	Required		Numeric Length 2
Duration Minutes	Required	and the second second second second	Numeric Length 2

Specifications for values, format, and data requirements <u>must</u> be followed!

> Facilities cannot use their own format for wound class, ASA, etc.

			mm/dd/yyyy
EMPTY (formerly	Required to be	This empty column is considered a	
Implant)	left blank	placeholder and must be included in	
		the import file. Any data contained in	
		this placeholder will be impored upon	

#### Data for custom fields can be imported

 Custom fields must first be set up in NHSN prior to importing data in these fields

Data Requirements assume in-plan reporting
 "Optional for Import"

- Required for a <u>complete</u> in-plan record.
- Think of the import file specifications as a companion to, and not in place of, the full requirements for procedures as described in the Tables of Instructions.
- Some fields are marked as "optional for import" as they were considered unobtainable through OR systems.
- In-plan records missing these values would be included on the "Incomplete" Procedure list after data are imported.

http://www.cdc.gov/nhsn/PDFs/ImportingProcedureData\_current.pdf

- Custom fields and surgeons codes must be set-up in NHSN prior to importing these optional data.
  - Remember: custom fields are set up per NHSN operative procedure category!
- Data in the import file must be in same order described in specifications document.
  - Includes leaving empty placeholders for optional fields that are not imported
  - Differs from order appearing on "Denominator for Procedure" form
  - Many errors during import are the result of these fields being out of order

		Select Import file:	C:\My Documents\ImportDemo.csv	Browse
			Submit Back	

- Click"Browse" to search for and select the file to import. Once the file has been selected, click"Submit."
- As the file is being submitted, a progress bar will appear; depending on the size of the file, it may take a few moments for the entire file to be submitted.

Once the entire file has been submitted, the Procedure Import screen will appear. The Procedure Import screen may have up to 5 tabs of procedure data:

- Inserts
- Bad Data
- Updates
- Multiple Records
- Duplicate Data

Inserts: This tab includes all procedure records that have passed the quality acceptance checks. These records can be imported without any additional editing.

Insert	Inserts Duplicate Data Bad Data													
Delete		patid (	gender	dob	proccode	procdate	outpatient	procdurationhr	procdurationmin	swclass	asa	endoscope	surgeor

# Troubleshooting

#### "Unable to extract the year from the procedure date".

- Make sure there are no extra or missing columns. This would cause all of the data to shift one column - which means NHSN would see an invalid value for procedure date.
- Be sure that there is no header row or empty row in the import file.
- Check all of the procedure dates to make sure they are in mm/dd/yyyy format. If only one procedure date is missing a / or includes a special character, it will throw off the entire import file.

#### Import/Export Data

Unable to extract the year from the procedure date.

Import/Export Type: Import Procedures (comma delimited)

# Troubleshooting

# "Unable to read uploaded file..."

- Can be caused by invalid NHSN operative procedure code(s)
- Can be caused by trailing, special characters

#### Import/Export Data

Unable to read uploaded file test\_procs.txt. Invalid data file. Only ASCII comma delimited text files are supported.

Import/Export Type: Import Procedures (comma delimited)

# Troubleshooting

### "Unable to import data"

 Can be caused by missing patient information, such as DOB or gender.

# Import/Export Data

×

😄 Unable to import data.

Import/Export Type: Import Procedures (comma delimited)

Facilities will be stopped if the data are not in correct order, or if they do not leave empty placeholders for optional fields.

It's extremely important that the same definitions and protocols are followed - many times, the OR staff or IT staff are not aware of the standard CDC definitions for these data fields

- Requires teamwork at the facility keep lines of communication open!
- Data managers/IT staff/OR staff can email NHSN directly with questions.
- Equally important for IP to understand data elements captured from OR/other systems

#### Make sure the patient IDs are correct!

- If patient IDs have leading zeros, make sure these leading zeros are captured upon import
- May need to change format of this column to "text", as opposed to "general" or "number"
- When entering subsequent SSIs, patient ID must match exactly

00-11-22-33 ≠ 00112233 00112233 ≠ 112233 MR112233 ≠ 112233

#### "Can I import a sample or test file??"

- NO!
- ALL data would exist in the live, national database therefore, only real data should be imported/tested
- Removing test data can be a time-consuming task for facility users
- NHSN team can help troubleshoot any errors/review files

# **Checking the Data**

- Imported data should be checked to insure accurate data have been collected
- Facility and Group users can utilize NHSN Analysis Output Options to accomplish this
- New variable has been added to analysis datasets
  - Variable name = imported
  - Y/N values
  - Will not assign this value to older (pre-6.3) imported records

# **Checking the Data: Procedure Duration**

- Example: You wish to check the procedure duration for all CBGB and CBGC procedures imported.
- SOLUTION: Run the "Line List All Procedures" and modify the following:
  - Limit to imported = Y AND procCode IN (CBGB, CBGC)
  - Include only the necessary variables, (e.g., procID, procCode, procDate, procDurationHr, procDurationMin)
  - Sort by procDurationHr and procDurationMin
  - May make other modifications, as necessary

NOTE: Similar modifications can be made to check CSEC height/weight/duration of labor/blood loss

# **Checking the Data: Procedure Duration**

#### National Healthcare Safety Network

Line Listing for All Procedures

As of: September 22, 2010 at 2:58 PM

Date Range: All PROCEDURES

					Procedure			Duration of	Duration of
Org ID	Patient ID	Date of Birth	Gender	Procedure ID	Date	Procedure Cod	е	Procedure - hr	Procedure - min
10018	829204	10/20/1925	F	21790	07/27/2009	CBGB		1	6
10018	250754	08/23/1941	М	21664	07/31/2009	CBGB		1	42
10018	789995	08/05/1925	F	21750	CBGB		1	47	
10018	814096	02/12/1931	М	21766	07/23/2009	CBGB		1	51
10018	838249	03/20/1930	М	21873	07/02/2009	CBGB		1	55
10018	838231							2	0
10018	527318	Notice th						2	7
10018	836570	durations	are <	<3hours.			2	12	
10018	739259	indication	n that	an incor	ion was		2	15	
10018	744782	imported	for t	hese prod			2	15	
2									

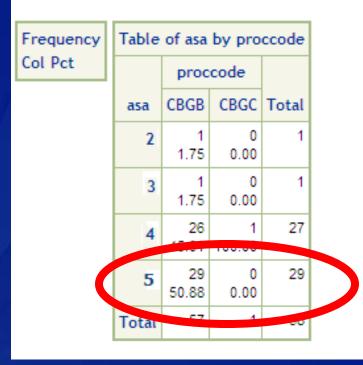

# **Checking the Data: ASA Score**

- Example: You wish to check the ASA score imported for all CBGB and CBGC procedures
- SOLUTION: Run the "Frequency Table All Procedures" and modify the following:
  - Limit to imported = Y and procCode IN (CBGB, CBGC)
  - Row = ASA
  - Column = procCode
  - May make other modifications, as necessary

NOTE: Similar modifications can be made to check other variables, such as Emergency, Wound Class, Trauma, etc.

# **Checking the Data: ASA Score**

National Healthcare Safety Network Frequency Table for All Procedures As of: September 22, 2010 at 3:15 PM Date Range: All PROCEDURES

ASA Score of 5 = Moribund patient who is not expected to survive for 24 hours with or without the operation.

It is unlikely that 50% of the patients undergoing CBGB would be classified as a 5.

# **Checking the Data: Next Steps**

- Discuss issues with OR staff, IT staff, and/or data manager
- Determine source of data & source of problem
- Do these results differ from manual entry of data? If so, why is there a difference?
- Have default values been used in the absence of electronic capture of variables?
- Perform data checks on a regular basis!
  - Especially after any changes in source database(s) and/or NHSN protocol
