***Severity**

Since this is by definition a reaction with no clinical symptoms, severity of the reaction cannot be graded.

Not determined

***Imputability**

Which best describes the relationship between the transfusion and the reaction?

- Transfusion performed by your facility is the only possible cause for seroconversion.
- The patient has other exposures (e.g. transfusion by another facility or pregnancy) that could explain seroconversion, but transfusion by your facility is the most likely cause.
- The patient was transfused by your facility, but other exposures are present that most likely explain seroconversion.
- Evidence is clearly in favor of a cause other than the transfusion, but transfusion cannot be excluded.
- There is conclusive evidence beyond reasonable doubt of a cause other than the transfusion.
- The relationship between the adverse reaction and the transfusion is unknown or not stated.

Did the transfusion occur at your facility? YES NO

When was the new alloantibody identified?

- Occurred between 24 hours and 28 days after cessation of transfusion
- Occurred less than 24 hours after cessation of transfusion OR greater than 28 days after cessation of transfusion
- No new antibody was identified

Module-generated Designations

NOTE: Designations for case definition, severity, and imputability will be automatically assigned in the NHSN application based on responses in the corresponding investigation results section above.
