Using the “Rate Table – MRSA Blood LabID Data for CMS PPS-Exempt Cancer Hospitals” Output Option

The NHSN Analysis Output Option, “Rate Table – MRSA Blood LabID Data for CMS PPS-Exempt Cancer Hospitals” was created in order to allow PPS-exempt cancer hospitals to review those data that would be submitted to CMS on their behalf. It’s important to keep in mind the following as you begin to use this report:

a. These data will only be submitted to CMS for those facilities that are participating in the CMS PPS –Exempt Cancer Hospital Quality Reporting Program, as indicated by their CCN recorded in NHSN.

b. This report will only include in-plan FACWIDEIN MRSA bacteremia LabID data for each hospital beginning with January 2016 data. Earlier time periods for which you may have reported FACWIDEIN MRSA bacteremia LabID data will not be included in this output.

c. IMPORTANT! Facilities must appropriately Report No Events for those locations and months for which no MRSA bacteremia LabID events were identified.

d. This output option provides rates for each facility, not each CCN. If your facility shares a CCN with another facility, the rates shown in NHSN will only represent the data that your facility has contributed to the overall rate for all facilities that share the CCN. You may wish to use the Group function in NHSN to be able to view the rates for all facilities that share a CCN. More information about the Group function can be found here: http://www.cdc.gov/nhsn/group-users/index.html.

e. The rates that will be shared with CMS and presented in this output option are calculated at the FACWIDEIN level only.

f. The data in this report will represent data current as of the last time you generated datasets. Data changes made in NHSN will be reflected in the next monthly submission to CMS. EXCEPTION: Quarterly data are frozen as of the final submission date for that quarter (e.g., Q1 data will be frozen as of 1am ET on May 16th); any changes made to these data in NHSN after the final submission deadline will not be reflected in data shared with CMS.

Example of the “Rate Table – MRSA Blood LabID Data for LTCH PPS” Output Option:

Before running this output option, remember to generate your datasets for the most up-to-date data reported to NHSN by your facility! To generate datasets, go to Analysis > Generate Data Sets, then click “Generate New”.

1. After selecting Analysis > Output Options, navigate through the following folders: CMS Reports > PPS-Exempt Cancer Hospitals (PCHQR). Click the report titled “Rate Table – MRSA blood LabID Data for CMS PPS-Exempt Cancer Hospitals”, as shown below. Then, click “Run” on the pop-up box.

2. By default, the results will appear in an HTML window. If a second window does not pop-up, please be sure to check your pop-up blocker and allow pop-ups from *.cdc.gov.

3. A single table titled “Rate Table – MRSA blood LabID Data for CMS PPS-Exempt Cancer Hospitals” will be presented in the pop-up HTML window. The table presents rates for each calendar quarter, for the FACWIDEIN location. This is the information that will be submitted to CMS for your facility.

Sample rate table report is below:

<table>
<thead>
<tr>
<th>SummaryYQ</th>
<th>Months</th>
<th>Location</th>
<th>MRSA_bldIncCount</th>
<th>numPatDays</th>
<th>MRSA_BSINcDensRate</th>
</tr>
</thead>
<tbody>
<tr>
<td>2016Q1</td>
<td>3</td>
<td>FACWIDEIN</td>
<td>1</td>
<td>3026</td>
<td>0.330</td>
</tr>
<tr>
<td>2016Q2</td>
<td>3</td>
<td>FACWIDEIN</td>
<td>0</td>
<td>2004</td>
<td>0.000</td>
</tr>
</tbody>
</table>
From this output, we can conclude the following:

- For the first quarter of 2016, this facility reported three months of FACWIDEIN MRSA bacteremia LabID data (months).
  - NOTE: for each quarter, there should be three months of data reported. If the “months” column shows a value less than 3, then the data for that quarter are incomplete. Please see step 4 below for information about how to troubleshoot incomplete quarters.

- In those three months, the facility reported 1 healthcare facility-onset MRSA bacteremia LabID event (MRSA_bldIncCount) and 3,026 patient days (numpatdays), which results in a FACWIDEIN MRSA bacteremia healthcare facility-onset incidence rate of 0.330 per 1,000 patient days (MRSA_BSIIncDensRate).

4. What can be done if data are incomplete, or if the number of LabID events or patient days is incorrect?
   i. Check that the summary data for the FACWIDEIN location have been entered for each month in the quarter. This includes patient days and admissions.
   ii. If summary data have been entered, double-check your monthly reporting plan for each month in the quarter. Check to make sure that the monthly reporting plans include FACWIDEIN for MRSA Bacteremia LabID Data.
   iii. If summary data have been entered and no MRSA blood LabID events have been identified, be sure to check the ‘Report No Events’ box on the summary record.
   iv. If the number of MRSA blood LabID events is less than you reported and you’ve confirmed that the summary data have been entered in-plan, double check the LabID events in NHSN using the “Line Listing for All MRSA LabID Events” output option.

REMEMBER: If you have made any changes to your data, regenerate your datasets in order to review your output options with the most up-to-date data in NHSN.
