

Using the “Rate Table – MRSA Blood LabID Data for IRF PPS” Output Option

This document applies to free-standing Inpatient Rehabilitation Facilities (IRFs). A similar document for IRF units located within an acute care or critical access hospital can be found at: http://www.cdc.gov/nhsn/pdfs/cms/irf/RateTable_IRFunits_MRSA.pdf.

The NHSN Analysis Output Option, “Rate Table – MRSA Blood LabID Data for IRF PPS” was created in order to allow inpatient rehabilitation facilities (IRFs) to review those data that would be submitted to CMS on their behalf. It’s important to keep in mind the following as you begin to use this report:

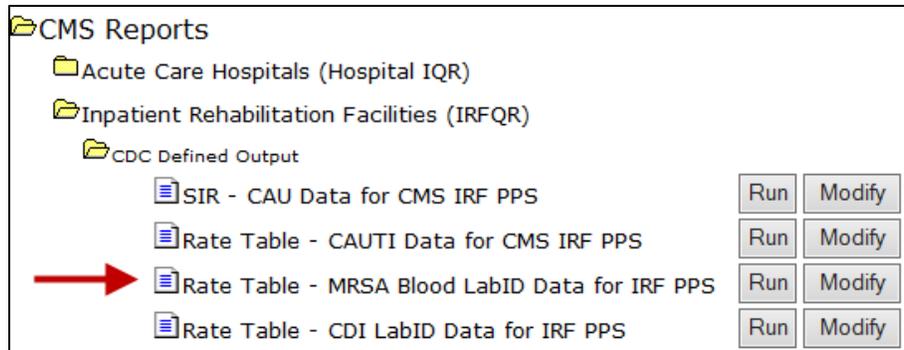

- a. These data will only be submitted for those facilities that are participating in the CMS Inpatient Rehabilitation Facility Quality Reporting Program, as indicated by their CCN recorded in NHSN.
- b. This report will only include **in-plan FACWIDEIN MRSA Blood LabID data for each IRF beginning with January 2015 data**. Earlier time periods for which you may have reported FACWIDEIN MRSA blood LabID data will not be included in this output.
- c. **IMPORTANT!** Facilities must appropriately **Report No Events** for those months for which no MRSA blood LabID events were identified.
- d. This output option provides rates for each IRF, not each CCN. If your IRF shares a CCN, the rates will only represent the data that your IRF has contributed to the overall rate for all IRFs under that CCN. You may wish to use the Group function in NHSN to be able to view the rates for all IRFs that share a CCN. More information about the Group function can be found here: <http://www.cdc.gov/nhsn/group-users/index.html>.
- e. The rates that will be shared with CMS and presented in this output option are calculated at the FACWIDEIN level only.
- f. The data in this report will represent data current as of the last time you generated datasets. Data changes made in NHSN will be reflected in the next monthly submission to CMS. **EXCEPTION:** Quarterly data are frozen as of the final submission date for that quarter (e.g., Q1 data will be frozen as of 3am ET on August 16th); any changes made to these data in NHSN after the final submission deadline will not be reflected in data shared with CMS.
- g. The information in this document should be used in conjunction with the document, “Helpful Tips for FacWideIN MRSA Bacteremia and CDI LabID Reporting for free-standing IRFs participating in CMS’ IRF Quality Reporting Program”, available from http://www.cdc.gov/nhsn/PDFs/CMS/Helpful_Tips_MRSA_Cdiff_IRF_Freestanding.pdf

Example of the “Rate Table – MRSA Blood LabID Data for IRF PPS” Output Option:

Before running this output option, remember to generate your datasets for the most up-to-date data reported to NHSN by your facility! To generate datasets, go to Analysis > Generate Data Sets, then click “Generate New”.

1. After selecting Analysis > Output Options, navigate through the following folders: CMS Reports > Inpatient Rehabilitation Facilities (IRFQR) > CDC-Defined Output. Click “Run” next to “Rate Table – MRSA Blood LabID Data for IRF PPS”, as shown below:

2. By default, the results will appear in an HTML window. If a second window does not pop-up, please be sure to check your pop-up blocker and allow pop-ups from *.cdc.gov.
3. A single table titled “Rate Table – MRSA Bacteremia LabID Event Data for CMS IRF PPS” will be presented in the pop-up HTML window. The table presents rates for each calendar-year quarter, for the FACWIDEIN location. This is the information that will be submitted to CMS for your facility.

Sample output for the “Rate Table – MRSA Bacteremia LabID Event Data for CMS IRF PPS” output option is displayed below:

National Healthcare Safety Network
Rate Table for MRSA Bacteremia LabID Events Data for CMS IRF PPS
Inpatient MRSA Bacteremia Incidence Density Rate
 As of: February 3, 2015 at 11:50 AM
 Date Range: LABID_RATESMRSAIRF summaryYr After and Including 2015

orgID=10962 CCN=013025

summaryYQ	months	locCDC	MRSA_bldIncCount	numpatdays	MRSA_BSIIncDensRate
2015Q1	3	FACWIDEIN	2	1966	1.017

Source of aggregate data: Not available
 Data contained in this report were last generated on February 3, 2015 at 10:28 AM.

From this output, we can conclude the following:

- For the first quarter of 2015, this IRF reported three months of FACWIDEIN MRSA blood LabID data (*months*).
 - NOTE: for each quarter, there should be **three** months of data reported. If the “months” column shows a value less than 3 (as in the example above), then the data for that quarter are **incomplete**. Please see step 4 below for information about how to troubleshoot incomplete quarters.
 - In those three months, the facility reported 2 incident, healthcare facility-onset MRSA blood LabID events (*MRSA_bldIncCount*) and 1,966 patient days (*numpatdays*), which results in a FACWIDEIN MRSA Blood Healthcare facility-onset incidence rate of 1.017 per 1,000 patient days (*MRSA_BSIIncDensRate*).
4. What can be done if data are incomplete, or if the number of LabID events or patient days is incorrect?
- i. Check that the summary data for the FACWIDEIN location have been entered for each month in the quarter. This includes patient days and admissions.
 - ii. If summary data have been entered, double-check your monthly reporting plan for each month in the quarter. Check to make sure that the monthly reporting plans include FACWIDEIN for MRSA blood LabID Data.
 - iii. If summary data have been entered and no MRSA LabID events have been identified, be sure to check the ‘Report No Events’ box on the summary record.
 - iv. If the number of MRSA blood LabID events is less than you reported *and* you’ve confirmed that the summary data have been entered in-plan, double check the LabID events in NHSN using the “Line Listing for All MRSA LabID Events” output option.

REMEMBER: If you have made any changes to your data, regenerate your datasets in order to review your output options with the most up-to-date data in NHSN.
