How to Set Up NHSN Reporting for Facility-Wide Inpatient MRSA Bacteremia and \textit{C. difficile} LabID events for the CMS Long Term Care Hospital* Quality Reporting Program

*Note that Long Term Care Hospitals are called Long Term Acute Care Hospitals (LTACHs) in NHSN.

The following instructions can be used as a guide to assist with facility setup and monthly reporting as required by the CMS Long Term Care Hospital Quality Reporting (LTCHQR) Program. This guidance only applies to the CMS LTCHQR Program’s facility-wide inpatient reporting requirement, and does not replace or supersede any requirements as part of state mandatory reporting.

Note: This document covers the requirements for facility-wide inpatient (FacWideIN) surveillance of both MRSA bacteremia and \textit{C. difficile}. The CMS LTCHQR Program no longer requires submission of data for MRSA bacteremia starting with 2018 Q4 data. However, LTACHs may still be required to report MRSA bacteremia data in response to a state or local reporting mandate, or may choose to continue this surveillance voluntarily.

In order to fully comply with NHSN’s reporting protocol for MRSA bacteremia and \textit{C. difficile}, LTACHs must map each of their inpatient locations, include MRSA bacteremia and \textit{C. difficile} LabID events in their monthly reporting plan each month, enter LabID events when identified, enter a summary data record each month, and indicate when they have zero LabID events to report for the facility in a given month. If these reporting requirements are not met, your facility’s data will not be sent to CMS if applicable.

Step 1: Map every inpatient location

- Reporting of MRSA bacteremia and \textit{C. difficile} LabID events must be done for all inpatient locations in your facility – each of these inpatient locations must be mapped as a unique location in NHSN. There are four inpatient locations available for LTACHs within NHSN, each listed below:

<table>
<thead>
<tr>
<th>CDC Location Description</th>
<th>CDC Location Code</th>
</tr>
</thead>
<tbody>
<tr>
<td>LTAC ICU</td>
<td>IN:ACUTE:CC:LTAC</td>
</tr>
<tr>
<td>Pediatric LTAC ICU</td>
<td>IN:ACUTE:CC:LTAC_PED</td>
</tr>
<tr>
<td>LTAC Ward</td>
<td>IN:ACUTE:WARD:LTAC</td>
</tr>
<tr>
<td>Pediatric LTAC Ward</td>
<td>IN:ACUTE:WARD:LTAC_PED</td>
</tr>
</tbody>
</table>

- To view, add, or edit the locations that you have mapped in your facility, click on Facility > Locations in the NHSN navigation bar to access the Location Manager.
Step 2: Include facility-wide reporting of MRSA bacteremia and *C. difficile* LabID events in your monthly reporting plans

- At the beginning of each month, add facility-wide reporting for MRSA bacteremia and *C. difficile* LabID events to your monthly reporting plan (MRP) using the “FacWideIN” location. The MDRO/CDI Module section of the plan must contain the two rows shown in the screenshot below in order for your facility’s data to be sent to CMS.

- If your facility chooses to report LabID events for all MRSA specimens (and indicates this on the MRP), only the MRSA LabID events from blood specimens will be included in the data sent to CMS.

Step 3: Identify and enter all MRSA bacteremia and *C. difficile* LabID events into NHSN by location

- Each month, facilities should use the MDRO/CDI Module protocol to identify MRSA bacteremia and *C. difficile* LabID events.
- All identified LabID events must be entered into NHSN using the specific inpatient location where the patient was assigned at the time of specimen collection, as shown in the screenshot below. You will not be able to use the FacWideIN location when reporting individual LabID events.
Step 4: Enter monthly summary data for the entire facility

- At the end of the month, enter an MDRO/CDI Module summary data record for the FacWideIN location.
  - Click on ‘Summary Data’ and then ‘Add’ on the left-hand navigation bar
  - Select ‘MDRO and CDI Monthly Denominator – all Locations’ from the Summary Data Type dropdown menu.

- On the summary data entry screen, you must select FacWideIN as the location for which you are entering the summary data by clicking on the drop down menu next to ‘Location Code.’

- After selecting the FacWideIN location, month, and year, two summary data fields will become required.
  - Note: The denominator form for the 3rd month of each quarter (March, June, September, December) will have an additional required data entry field for CDI test type. Use the drop-down menu to select the CDI laboratory test method that was used for the majority of that quarter

- For more information about how to collect and report the information required, refer to the MDRO/CDI Module protocol.
May 2019

- If you have identified and reported both MRSA bacteremia and *C. difficile* LabID events during the month, you are finished with your reporting for the month. If not, proceed to Step 5 (reporting no events).

**Step 5: Reporting no events for MRSA bacteremia and *C. difficile* LabID events**

- If you have not identified any LabID events for MRSA bacteremia and/or *C. difficile* at the end of a month, you must indicate this on the summary data record in order for your data to be sent with CMS.
- On the MDRO and CDI Module summary data form, checkboxes for “Report No Events” are found underneath the patient day and admission count fields, as seen in the screenshot below.

![Organism Selection/Confirmation of No Events](image)

- If LabID events have already reported for the specific organism, the “Report No Events” box will be disabled, preventing it from being checked.

*Please note:* If you identify and enter LabID events for an organism after you’ve already checked the “Report No Events” box, the “Report No Events” check will automatically be removed in the NHSN database.
