Sent: Tuesday, March 10, 2020 10:15 AM

The National Healthcare Safety Network (NHSN) provides you the opportunity to receive *Just In Time* training with Quick Learns. Quick Learns are resources that may define a specific part of a protocol or deliver approaches for data analysis within the NHSN Application. Quick Learns are short, 7-15-minute educational experiences, provided by NHSN's Protocol & Validation and Methods & Analytics Teams.

We have a new 10-minute Quick Learn resource that will describe the purpose and utility of the Compare Single SIR to Nominal Value option of the Statistics Calculator in the NHSN Application.

Check it out below!

Statistics Calculator: Compare Single SIR to Nominal Value

Click [here](#) to view our short video and learn when to use the Compare Single SIR to Nominal Value option, how to use the Compare Single SIR to Nominal Value option to input data for comparison, and how to interpret the comparison results.
