

Pediatric Ventilator-associated Event (PedVAE)

Cindy Gross, MT, SM (ASCP), CIC
Infection Prevention Consultant
Division of Healthcare Quality Promotion

March 26, 2019

Today's Training Goals

- Review the History and Development of PedVAE
- Review PedVAE Key Terms and How to Select Daily Minimum Values
- Review the PedVAE Surveillance Algorithm
- Review the Use of the PedVAE Calculator

Ventilated Patients and the Need for Surveillance

- Ventilated patients are at high risk for complications and poor outcomes
 - Ventilator-associated pneumonia (VAP), sepsis, Acute Respiratory Distress Syndrome (ARDS), pulmonary embolism, barotrauma, and pulmonary edema
- Such complications can lead to longer duration of mechanical ventilation, longer stays in the ICU and hospital, increased healthcare costs, and increased risk of disability and death
- In preterm neonates, prolonged mechanical ventilation for respiratory distress syndrome can contribute to the development of chronic lung disease
- Prolonged mechanical ventilation in extremely low birthweight infants is also associated with neurodevelopmental delay

Pediatric Ventilator-associated Event Surveillance

- **Neonatal & Pediatric VAE Surveillance Working Group** convened 2012 to explore use of VAE (adult algorithm) in pediatric and neonatal inpatient locations
 - Insufficient data to use the same approach as used for adults
 - January 2014 *in-plan* surveillance for ventilator-associated pneumonia (PNEU/VAP) removed for neonatal locations.
 - PNEU/VAP surveillance only available in pediatric inpatient locations (pedVAP)

Pediatric Ventilator-associated Event Surveillance

- Publication* in 2016 on the use of a pediatric VAE-like definition demonstrated detection of events defined by changes in FiO₂ and Mean Airway Pressure were associated with increases in length of stay and mortality

Ventilator-Associated Events in Neonates and Children—A New Paradigm*

This research was funded by the Agency for Healthcare Research and Quality (AHRQ) R18 grant (#1R18HS021636) to Dr. Lee. Dr. Gray has received funding from the Vermont Oxford Network. Dr. Logan also receives from the National Institutes of Health (NIH) (R01HL12506-01; not related to this grant).

Dr. Cocoros' institution received funding from the Agency for Healthcare Research and Quality (AHRQ). Dr. Kleinman's institution received funding from AHRQ. Dr. Priebe's institution received funding from AHRQ.

Dr. Gray received funding from the Vermont Oxford Network. His institution received funding from AHRQ. Dr. Logan received support for article research from the National Institutes of Health (NIH) (R01HL12506-01).

Dr. Harper's institution received funding from AHRQ. Dr. Sandora received funding from the Society for Healthcare Epidemiology of America. His institution received funding from AHRQ. Dr. Klompas' institution received funding from AHRQ and CDC.

Dr. Lee served on an ICM Board, AHRQ study section, PIDS Board of directors, and as VON faculty (None are paid except for travel expenses to meetings) and received support for article research from the AHRQ. Her institution received funding from the AHRQ R18 grant. The remaining authors have disclosed that they do not have any potential conflicts of interest. The findings and conclusions in this report are those of the author(s) and do not necessarily represent the views of the Centers for Disease Control and Prevention.

For information regarding this article, E-mail: Noelle.Cocoros@harvardpilgrim.org

Objectives: To identify a pediatric ventilator-associated condition definition for use in neonates and children by exploring whether potential ventilator-associated condition definitions identify patients with worse outcomes.

Design: Retrospective cohort study and a matched cohort analysis.

Setting: Pediatric, cardiac, and neonatal ICUs in five U.S. hospitals.

Patients: Children 18 years old or younger ventilated for at least 1 day.

Interventions: None.

Measurements and Main Results: We evaluated the evidence of worsening oxygenation via a range of thresholds for increases in daily minimum fraction of inspired oxygen (by 0.20, 0.25, and 0.30) and daily minimum mean airway pressure (by 4, 5, 6, and 7 cm H₂O). We required worsening oxygenation to be sustained for at least 2 days after at least 2 days of stability. We matched patients with a ventilator-associated condition to those without and used Cox proportional

Pediatric Ventilator-associated Event Surveillance (cont'd)

- Working Group consensus reached to begin development with a plan to implement PedVAE as an available event in NHSN
- PedVAE field testing conducted in 2017
- Available as an event beginning January 2019

PedVAE Surveillance

Where do I find the PedVAE Protocol?

Acute Care, Long-term Acute Care, Inpatient Rehabilitation.....

Tracking Infections in Acute Care Hospitals/Facilities

NHSN is the HAI surveillance gold standard. The system (and its predecessors) started years ago helping a few hundred healthcare facilities; today, more than 17,000 healthcare facilities use NHSN as the cornerstone of their HAI elimination strategies. Specifically, facilities use NHSN to:

- Access NHSN enrollment requirements for CMS Hospital Inpatient Quality Reporting Program,
- Obtain baseline HAI rates,
- Compare rates to CDC's national data,
- Participate in state or national HAI prevention collaboratives,
- Devise and implement HAI elimination strategies,
- Evaluate immediate and long-term results of elimination efforts,
- Refocus efforts as needed, or advance to different areas.

11 Topics
13 Questions

Who is eligible for PedVAE surveillance?

- Ventilated inpatients of acute care hospitals, long term acute care hospitals, inpatient rehabilitation facilities
- Patients in pediatric and neonatal locations only where denominator data (patient days and ventilator days) can be collected
 - Ventilated adults in pediatric locations are included in PedVAE surveillance – regardless of age

Who is NOT eligible for PedVAE surveillance?

- Patients on extracorporeal life support or paracorporeal membrane oxygenation are not eligible for VAE surveillance
 - Ineligibility only applies to periods of time while receiving this form of support
- Non-acute care locations in acute care facilities are not eligible to participate in PedVAE surveillance.

What about other specific modes of mechanical ventilation?

- INCLUDE patients on:
 - High Frequency Oscillatory or jet ventilation (HFO)
 - Airway Pressure Release Ventilation (APRV)
 - Volumetric Diffusive Respiration (VDR) – FiO_2 parameter only
- INCLUDE patients who are receiving a conventional mode of mechanical ventilation while receiving:
 - Surfactant
 - Corticosteroids
 - Prone positioning
 - Nitric oxide therapy
 - Helium-oxygen mixture
 - Epoprostenol therapy

PedVAE Algorithm Overview

****The PedVAE definition algorithm is for use in surveillance; it is not a clinical definition algorithm and is not intended for use in the clinical management of patients.****

PedVAE Definition Algorithm Summary

Patient on mechanical ventilation > 2 days

**Baseline period of stability or improvement, followed by
sustained period of worsening oxygenation**

Pediatric Ventilator-Associated Event (PedVAE)

**SINGLE
TIER**

PedVAEs are determined by identification of deterioration in respiratory status after a period of stability or improvement on the ventilator

- Using either of two key parameters that demonstrate effective oxygenation in ventilated patients
 - FiO_2
 - Mean Airway Pressure (MAP)

FiO₂

- Fraction of Oxygen in inspired gas
 - FiO₂ of room air is 0.21
 - Oxygen concentration of room air is 21%.
- FiO₂ is a setting on the ventilator and is one of the key parameters that can be adjusted depending on the patients oxygenation requirement

MAP

- Mean Airway Pressure— Mean (average) pressure exerted on the airway and lungs from the beginning of inspiration until the beginning of the next inspiration (inspiratory cycle)
- MAP is a measured/calculated value (not a ventilator setting) that is determined by
 - PEEP - Peak End-Expiratory Pressure
 - PIP- Peak Inspiratory Pressure
 - Inspiratory time
 - Other parameters like flow or frequency
- MAP for purposes of PedVAE surveillance is NOT Mean Arterial Pressure

FiO₂ and MAP

- FiO₂ ventilator settings and MAP values documented across the calendar day are used to identify the daily minimum FiO₂ and daily minimum MAP values
- The daily minimum FiO₂ and daily minimum MAP values are used to determine both the period of stability or improvement and the period that indicates worsening oxygenation.
- Stability, improvement or worsening is not determined by comparing FiO₂ settings and MAP values that occur during a calendar day but by comparing the daily minimum values from calendar to calendar day
- Use a calendar day not any other “ 24 hour capture period”

Daily Minimum FiO₂ and MAP

- FiO₂ settings and MAP readings are typically recorded in the paper or electronic medical record, on respiratory therapy and/or nursing flow sheets, in the section of the flow sheet that pertains to respiratory status/mechanical ventilation
- When choosing the daily minimum FiO₂ and MAP, use all documented findings that are recorded throughout the calendar day during times when the patient is receiving support from an eligible mode of mechanical ventilation
 - Include FiO₂ and MAP values documented during weaning/mechanical ventilation liberation trials as long as the patient is receiving ventilator support during those trials
 - Excludes FiO₂ and MAP values documented during periods of time when the patient is on extracorporeal or paracorporeal membrane oxygenation

Daily Minimum FiO₂

- The daily minimum FiO₂ is defined as the **lowest documented FiO₂ setting that was maintained for > 1 hour during a calendar day**
- Protocol provides examples of how > 1 hour is to be determined to ensure standardization across all facilities
 - If tracking every 15 minutes, 5 consecutive recordings of a certain level would be needed (e.g., at 09:00, 09:15, 09:30, 09:45 and 10:00)
 - If tracking every 30 minutes, 3 consecutive recordings at a certain level would be needed (e.g., at 09:00, 09:30, and 10:00)
 - If tracking PEEP every hour, 2 consecutive recordings at a certain level (e.g., at 09:00 and 10:00)
- If there is no setting that has been maintained for > 1 hour then select the lowest setting regardless of the period of time in which the setting was maintained

Identify the Daily Minimum FiO_2 for Monday

Select the lowest value recorded for each calendar day that is maintained for >1 hour

	Monday 12am	3am	4am	6am	9am	12pm	3pm	9pm	11pm
FiO_2	0.80	0.70	0.90	0.80	0.80	0.75	0.75	0.75	0.75

Identify the Daily Minimum FiO₂

Select the lowest value recorded for each calendar day that is maintained for >1 hour

	Monday 12am	3am	4am	6am	9am	12pm	3pm	9pm	11pm
FiO ₂	0.80	0.70	0.90	0.80	0.80	0.75	0.75	0.75	0.75

- **Monday:** 0.75 is Daily Minimum FiO₂ , the lowest value 0.70 was not maintained for > 1 hour

Identify the Daily Minimum FiO₂ for Monday and Tuesday

Ventilation is initiated late in the calendar day

	Monday 2300	2330	Tuesday 0030	0100	0300	0600	0900	1200
FiO ₂	0.70	0.80	0.80	0.80	0.80	0.75	0.75	0.80

Identify the Daily Minimum FiO₂

Ventilation is initiated late in the calendar day

	Monday 2300	2330	Tuesday 0030	0100	0300	0600	0900	1200
FiO ₂	0.70	0.80	0.80	0.80	0.80	0.75	0.75	0.80

- **Monday:** 0.70 is the Daily Minimum FiO₂, there was no value maintained for > 1 hour
- Do not look to the next calendar day to determine if a setting was maintained > 1 hour
- **Tuesday:** 0.75 is the Daily Minimum FiO₂, the lowest value maintained for > 1 hour

Daily Minimum MAP

- The daily minimum MAP is the **lowest value documented during a calendar day regardless of how long the value is maintained**
- When determining the daily minimum MAP, if MAP values include a decimal place then round the MAP value to the nearest whole number
 - A MAP of 10.00 – 10.49 is rounded to 10
 - A MAP of 10.50 – 10.99 is rounded to 11

Daily Minimum MAP

- For patients < 30 days MAP values of 0-8 cmH₂O are considered **equal to 8 cmH₂O**
 - Any day where daily minimum MAP is 0-8 cmH₂O will be assigned a daily minimum MAP value of 8 cmH₂O.
- For patients ≥ 30 days MAP values 0-10 cmH₂O are considered **equal to 10 cmH₂O**
 - Any day where daily minimum MAP is 0-10 cmH₂O will be assigned a daily minimum MAP value of 10 cmH₂O.

Identify the Daily Minimum MAP for a Patient < 30 Days

	Monday							
	12am	3am	6am	9am	12pm	3pm	6pm	9pm
MAP	8	6	8	5	5	8	10	10

Identify the Daily Minimum MAP - < 30 Days

Select the lowest value recorded for each calendar day

	Monday 12am	3am	6am	9am	12pm	3pm	6pm	9pm
MAP	8	6	8	5 (8)	5	8	10	10

- Monday: The lowest value is 5 cmH₂O.
- For patients < 30 days values 0-8 = 8
- Monday:** Daily Minimum MAP is 8 cmH₂O

Identify the Daily Minimum MAP for a Patient ≥ 30 Days

	Monday 12am	3am	6am	9am	12pm	3pm	6pm	9pm
MAP	8	6	8	5	5	8	10	10

Identify the Daily Minimum MAP for a Patient ≥ 30 Days

Select the lowest value recorded for each calendar day regardless of how long it was maintained

	Monday 12am	3am	6am	9am	12pm	3pm	6pm	9pm
MAP	8	6	8	5 (10)	5	8	10	10

- Monday: The lowest value is 5 cmH₂O.
- For patients ≥ 30 days values 0-10 = 10
- Monday:** Daily Minimum MAP is 10 cmH₂O

Identify the Daily Minimum MAP

Select the lowest value recorded for each calendar day

Remember to round values

	Monday 12am	3am	6am	9am	12pm	3pm	6pm	9pm
MAP	12.4	12.1	12.9	11.8	12.4	12.0	12.7	12.7
	12	12	13	12	12	12	13	13

- Monday: Daily Minimum MAP is 12 cmH₂O

Figure 1: Pediatric Ventilator-Associated Events (PedVAE) Surveillance Algorithm

Patient has a baseline period of stability or improvement on the ventilator, defined by ≥ 2 calendar days of stable or decreasing daily minimum* FiO_2 or MAP values. The baseline period is defined as the 2 calendar days immediately preceding the first day of increased daily minimum MAP or FiO_2 .

*Daily minimum FiO_2 is defined as the lowest value of FiO_2 documented during a calendar day that is maintained for > 1 hour.

Daily minimum MAP is the lowest value documented during the calendar day.

For patients < 30 days old, daily minimum MAP values 0-8 cmH_2O are considered equal to 8 cmH_2O for the purposes of surveillance.

For patients ≥ 30 days old, daily minimum MAP values 0-10 cmH_2O are considered equal to 10 cmH_2O for the purposes of surveillance.

After a period of stability or improvement on the ventilator, the patient has at least one of the following indicators of worsening oxygenation:

- 1) Increase in daily minimum FiO_2 of ≥ 0.25 (25 points) over the daily minimum FiO_2 of the first day in the baseline period, sustained for ≥ 2 calendar days.
- 2) Increase in daily minimum MAP values of ≥ 4 cmH_2O over the daily minimum MAP of the first day in the baseline period, sustained for ≥ 2 calendar days.

Pediatric Ventilator-Associated Event (PedVAE)

PedVAE

- Patient must be ventilated > 2 days to be eligible for PedVAE surveillance
 - However, the first two days of mechanical ventilation can establish a baseline period
- Patients must be mechanically ventilated for at least 4 calendar days to fulfill PedVAE criteria (where the day of intubation or initiation of mechanical ventilation is day 1)
 - 2 days of stability or improvement
 - 2 days of evidence of worsening oxygenation

PedVAE Definition Is Met IF:

FiO₂– a baseline period of stability or improvement immediately followed by an increase over the baseline in the daily minimum FiO₂ of ≥ 0.25 (25%) that is sustained for ≥ 2 days

OR

MAP–a baseline period of stability or improvement immediately followed by an increase over the baseline in the daily minimum MAP of ≥ 4 cmH₂O that is sustained for ≥ 2 days

Daily Minimum MAP

- For patients < 30 days MAP values of 0-8 cmH₂O are considered **equal to 8 cmH₂O**
 - Any day where daily minimum MAP is 0-8 cmH₂O will be assigned a daily minimum MAP value of 8 cmH₂O.
 - **Following a ≥ 2 day period of stability at 8 cmH₂O an increase in daily minimum MAP to at least 12 cmH₂O sustained for at least 2 calendar days is required**
- For patients ≥ 30 days MAP values 0-10 cmH₂O are considered **equal to 10 cmH₂O**
 - Any day where daily minimum MAP is 0-10 cmH₂O will be assigned a daily minimum MAP value of 10 cmH₂O.
 - **Following a ≥ 2 day period of stability at 10 cmH₂O an increase in daily minimum MAP to at least 14 cmH₂O sustained for at least 2 calendar days is required**

PedVAE Definition

- **Baseline:** ≥ 2 calendar days of **stable or decreasing** daily minimum FiO₂ or MAP values and immediately precedes the first day of increased daily minimum MAP or FiO₂.
- **Worsening:** After a period of stability or improvement on the ventilator, the patient has at least one of the following indicators of worsening oxygenation:
 - Increase in daily minimum FiO₂ of ≥ 0.25 (**25 points**) over the daily minimum FiO₂ of the **first day in the baseline period**, sustained for ≥ 2 calendar days.

OR

- Increase in daily minimum MAP values of ≥ 4 **cmH₂O** over the daily minimum MAP of the **first day in the baseline period**, sustained for ≥ 2 calendar days.

7	8	40
8	8	40

 **PedVAC**

**≥ 0.25 (25%) increase
over the baseline period
is not sustained for ≥ 2
days**

Operationalizing PedVAE – FiO₂

(patient is < 30 days or ≥ 30 days)

Vent Day	Daily Minimum MAP	Daily Minimum FiO ₂
1	13	60
2	12	40
3	10	40
4	14	65
5	15	50
6	10	40
7	8	40
8	8	40

 **PedVAC**

Increase is not ≥ 4 cmH₂O over the daily minimum MAP of the first day in the baseline period.

Date of Event / Event Date

- The date of onset of worsening oxygenation (day 1 of the required ≥ 2 day period of worsening oxygenation)
 - Earliest date of event for VAE is mechanical ventilation day 3 (first day of worsening oxygenation)
 - First possible day that PedVAE criteria can be fulfilled is mechanical ventilation day 4

Date of Event

- Defines the period during which the antimicrobial and pathogen questions apply
- Sets the 14-day PedVAE Event Period
 - Each PedVAE is 14 days in duration (arbitrary—to standardize).
 - Day 1 is the Event Date—so if June 1 is date of onset of worsening oxygenation and a **PedVAE** is reported, a second **PedVAE** cannot be detected and reported until June 15.

Reporting Exception related to Date of Event

- If the date of event (date of onset of worsening oxygenation) is on or after the date of documentation of evidence of consent AND the patient is being supported for organ donation purposes, the event should not be reported as a PedVAE.

Operationalizing PedVAE

(patient is < 30 days)

Vent Day	MAPmin	FiO ₂ min
1	13	60
2	8 (7)	40
3	8 (7)	40
4	12	40
5	12	50
6	10	40
7	8	40
8	8	40

Event Date = Vent Day 4 (first day of worsening oxygenation)
14 Day event period is Vent Day 4 – Vent Day 17

Pediatric Ventilator-Associated Event Calculator

Version 1.0

Welcome to Version 1.0 of the PedVAE Calculator. Version 1.0 operates based upon the currently posted PedVAE protocol.

The Calculator is a web-based tool that is designed to help you learn how the PedVAE surveillance definition algorithm works and assist you in making PedVAE determinations.

Please note that the PedVAE Calculator will not ask you to enter any patient identifiers (other than dates of mechanical ventilation, which you can change as you see fit). The PedVAE Calculator does not store any patient data that you enter, and it will not report any data that you enter or any PedVAE determinations to the NHSN. You will not be able to export data entered into the Calculator.

If you have questions or suggestions about the Calculator, please feel free to send them to the NHSN mailbox, nhsn@cdc.gov.

Pediatric Ventilator-Associated Event Calculator

Version 1.0

(must have javascript enabled)

<https://www.cdc.gov/nhsn/pedvae-calculator/index.html>

NHSN Pediatric Ventilator-Associated Event (PedVAE) Calculator Ver. 1.0

Welcome to the Pediatric Ventilator-Associated Event Calculator. Version 1.0 operates based upon the currently posted PedVAE protocol. It is strongly encouraged that you thoroughly review the [PedVAE protocol](#).

- The calculator recognizes Mean Airway Pressure (MAP) values 0-8 cmH₂O as equal to 8 for patients < 30 days of age and MAP values 0-10 cmH₂O as equal to 10 for patients ≥ 30 days of age and corrects entries according to the PedVAE protocol prior to making a PedVAE determination.
- Daily minimum MAP readings are to be rounded to the nearest whole number using the following method as an example: A MAP value 10.00 - 10.49 is rounded to 10 and a MAP value 10.50 - 10.99 is rounded to 11.
- The calculator finds multiple PedVAEs per patient as long as they conform to the 14 day rule.

To get started, **enter a date below that corresponds to the first day the patient was placed on mechanical ventilation during the mechanical ventilation episode of interest.** You may type in a date or use the popup calendar when it appears. You may only enter dates within the past year. If the patient has been on mechanical ventilation for more than one year during the current mechanical ventilation episode, choose a start date that is more recent but is at least 7 days before the period of interest. [more...](#)

NHSN Pediatric Ventilator-Associated Event (PedVAE) Calculator Ver. 1.0

Welcome to the Pediatric Ventilator-Associated Event Calculator. Version 1.0 operates based upon the currently posted PedVAE protocol. It is strongly encouraged that you thoroughly review the [PedVAE protocol](#).

- The calculator recognizes Mean Airway Pressure (MAP) values 0-8 cmH₂O as equal to 8 for patients < 30 days of age and MAP values 0-10 cmH₂O as equal to 10 for patients ≥ 30 days of age and corrects entries according to the PedVAE protocol prior to making a PedVAE determination.
- Daily minimum MAP readings are to be rounded to the nearest whole number using the following method as an example: A MAP value 10.00 - 10.49 is rounded to 10 and a MAP value 10.50 - 10.99 is rounded to 11.
- The calculator finds multiple PedVAEs per patient as long as they conform to the 14 day rule.

To get started, **enter a date below that corresponds to the first day the patient was placed on mechanical ventilation during the mechanical ventilation episode of interest**. You may type in a date or use the popup calendar when it appears. You may only enter dates within the past year. If the patient has been on mechanical ventilation for more than one year during the current mechanical ventilation episode, choose a start date that is more recent but is at least 7 days before the period of interest.

The calculator runs locally on your machine. Data that you enter are not stored, nor are they transmitted to NHSN. Feel free to enter or change as much data as you like. If you don't understand something, there are several mechanisms for getting help. Most of the buttons and table headings will give an expanded description if you hover your mouse over the item in question. Also the explain button will pop up an explanation of the reasoning behind the calculation. The explanation box is movable as are all the popup windows. That allows you to open one up and drag it to the side as you work. The explanation will automatically update itself as you work through the protocol.

- PedVAE identified

* All values of MAP less than 8 cmH₂O (or less than 10 cmH₂O **) are considered to be 8 cmH₂O (or 10**) for purposes of the PedVAE definition. So for MAP values entered as less than or equal to 8 (or 10**) cmH₂O, an increase in the daily minimum MAP to at least 12 cmH₂O (or 14**), sustained for 2 or more calendar days, is required to meet the PedVAE definition.

** 10 for patients greater than or equal to 30 days

NHSN Pediatric Ventilator-Associated Event (PedVAE) Calculator Ver. 1.0

No Pediatric Ventilator-Associated Event (PedVAE) detected. Click on the "Explain" button to see an explanation of the PedVAE definition.

Is the patient's age less than 30 days?: No

Calculate PedVAE

Start Over

Explain...

MV Day	Date	Min. MAP 0 - 50 (cmH ₂ O)	Min. FiO ₂ (21 - 100)	PedVAE
1	12/30/2018	10 (3)*	30	
2	12/31/2018	10 (8)*	30	
3	1/1/2019	12	30	
4	1/2/2019	12	40	
5	1/3/2019	12	40	

Legend: † - PedVAE ‡ - PedVAE Date

- Patient \geq 30 days
- MAP values 0-10 = 10
- No PedVAE
- Increase over baseline is not \geq 4 cmH₂O

* All values of MAP less than 8 cmH₂O (or less than 10 cmH₂O **) are considered to be 8 cmH₂O (or 10**) for purposes of the PedVAE definition. So for MAP values entered as less than or equal to 8 (or 10**) cmH₂O, an increase in the daily minimum MAP to at least 12 cmH₂O (or 14**), sustained for 2 or more calendar days, is required to meet the PedVAE definition.

** 10 for patients greater than or equal to 30 days

Is the patient's age less than 30 days?: Yes

Calculate PedVAE

Explain...

WARNING: The calculator's PedVAE determination may be affected when the patient crosses the 30-day threshold during the period of interest (2 day baseline period and 2 day period of worsening oxygenation).

MV Day	Date	Min. MAP 0 - 50 (cmH ₂ O)	Min. FiO ₂ (21 - 100)	PedVAE
1	12/30/2018	8 (3)*	30	
2	12/31/2018	8	30	
3	1/1/2019	12	30	± PedVAE
4	1/2/2019	12	40	
5	1/3/2019	12	40	
6	1/4/2019			
7	1/5/2019			
8	1/6/2019			
9	1/7/2019			
10	1/8/2019			
11	1/9/2019
