**Production Tables on Mast Climbing Work Platforms**

Can Reduce Back Injuries and Falls

**MAST CLIMBING**

work platforms or mast climbers get the job done faster…

until a worker is injured or loses balance,

increasing the risk of falling off the mast climbing work platform.

**INJURIES**

such as back injuries often occur from manual material handling.

1 out of 2 overexertion injuries in construction are back injuries.¹

2 out of 5 fatal falls from mast climbers involve masons.²

**INTERVENTIONS**

that help masons maintain good posture and balance can reduce back injuries and prevent falls.

Production tables increase platform space with bricks and mortar stored on top and tools and materials below. The table is set at a comfortable height for work.

Production tables on mast climbers can help reduce back injuries and prevent falls.

**Production tables can help keep workers safe on the job**

**Production tables on mast climbers can help reduce fall and back injuries by**

- Improving standing balance.
- No longer stepping down to the lower deck.
- Reducing trunk motion during work.
