Dear Sir:

I am contacting you in regard to 42CFR Part #84. Litton Instruments & Life Support Division, Davenport, Iowa has NIOSH approval for a two hour positive pressure closed circuit SCBA which uses mixed gas (38% O2 enriched).

In reviewing 42CFR Part #84, which I received today, I do not see anything that addresses a mixed gas closed circuit SCBA. Was this omitted by design or is this just an oversight? Please advise.

Best regards,

P.J. (Pat) McLaughlin
Assistant Director Business Development
