Subject: 103 - Endicott Project Comments

I worked in the Poughkeepsie IBM plant on the printed circuit board line. Since many of the chemicals that were used in Endicott were also used in Poughkeepsie, why aren't the Poughkeepsie employees that were exposed to these chemicals included in the cancer study? Especially with the use of heated trichloroethylene in the production process.

- had bladder cancer while working with trichloroethylene, approximately years old.
