Cincinnati, Ohio 45226**

Dear Mr. Taff:

I Gloria Gail Clary a decedent of [redacted] who worked at the Huntington, WV Pilot Plant, this is in regards to CLL being included as a Radiogenic Cancer under the EEOICPA.

This Pilot Plant was top Secret Government Plant at INCO LTD in Huntington, WV that produced Fine Nickel Carbonyl for a uranium enrichment Plant near Piketon, Ohio.

The Atomic Energy Commission owned this Pilot Plant or Reduction Pilot Plant and leased the property for the International Nickel Company to operate. This was Highly secured unit that the Federal Government had investigated and cleared my Father to work in.

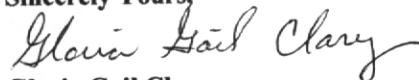

This extremely pure Nickel Carbonyl is known to cause extreme headaches, dizziness, weakness an increase in the number of White Blood Cells, know as Leukocytosis or Leukemia, many times my father would come home from work, complaining of Extreme Headaches, dizzy and weakness.

My Father was diagnosed with Chronic Lymphatic Leukemia in the early 1960's and he passed away with this dreadful disease October 21, 1974.

My father could not have Contacted this disease in any other way than the work place, because the only thing he did, was work in the plant, go to church and garden.

My feelings are my father lost his life at an early age in working in the Pilot or Reduction Plant and its enviornment and I strongly feel that CLL should be included as a radiogenic cancer under the Energy Employs occupational Illiness Program October of 2000.

Sincerely Yours,

Gloria Gail Clary
