Subject: public comment on federal register FW: cdc hides out from helping american citizens protect themselves from epa approved toxic chemicals - it never provides any health info to help protect - never - what use is this agency

it is time to revise the 1990 carcinogen docket. it is clear that with americans carrying around 248 toxic chemicals in their bodies that toxic chemicals are being approved for use in america. it is time to ban them. it is time to protect america. one has to wonder why all of the agencies taking billions in dollars from us fail to take any action to protect our health. cdc is an example of an utter failure as a health agency.
