NIOSH Dose Reconstruction Program

The findings and conclusions expressed in this draft report are those of the author(s) and do not necessarily represent the views or position of the National Institute for Occupational Safety and Health (NIOSH), the Centers for Disease Control and Prevention (CDC), or the Department of Health and Human Services (HHS). Any statutory, regulatory, or other legal interpretation included in this draft report is outside the scope of this review and should not be construed to represent the official position of HHS, CDC, or NIOSH. This document is one of many factors that the Director of NIOSH may consider in the ten-year review of NIOSH’s performance under the Energy Employees Occupational Illness Compensation Program.

Draft

Ten Year Review - Phase I Report

Timeliness of Program Task Accomplishments

Nancy Adams
Dr. Lewis Wade

November, 2010
The findings and conclusions expressed in this draft report are those of the author(s) and do not necessarily represent the views or position of the National Institute for Occupational Safety and Health (NIOSH), the Centers for Disease Control and Prevention (CDC), or the Department of Health and Human Services (HHS). Any statutory, regulatory, or other legal interpretation included in this draft report is outside the scope of this review and should not be construed to represent the official position of HHS, CDC, or NIOSH. This document is one of many factors that the Director of NIOSH may consider in the ten-year review of NIOSH’s performance under the Energy Employees Occupational Illness Compensation Program.

**Timeliness**

**November, 2010**

**Ten Year Review of the NIOSH Radiation Dose Evaluation Program- Phase I Report**

**Timeliness of Program Task Accomplishments**

1. **Background**

This section of the Phase I Report focuses on the timing of Program Task Accomplishments. Looked at from a bottom line prospective, NIOSH program tasks fall into two distinct categories: 1) Individual dose reconstructions (DRs); and 2) Special Exposure Cohort Petitions (SECs). While there are many other tasks NIOSH performs, such as preparing Site Profiles and developing Procedures, all these tasks are performed to impact either the DRs or the SECs.

Terms such as Types of Dose Reconstructions, Dose Reconstruction Re-works, are described in detail in the Background section on Dose Reconstruction. During the period covered by this report, NIOSH completed and returned to the Department of Labor (DOL) 25,833 completed Dose Reconstructions, and prepared and submitted 79 SEC Evaluation Reports to the Advisory Board.

**Special Exposure Cohort**

The Special Exposure Cohort (SEC) is a uniquely defined category of employees established under the Energy Employees Occupational Illness Compensation Program Act (EEOICPA or The Act). The SEC is comprised of classes of employees who have any of 22 "specified cancers," who worked for a specified period of time at one of the SEC Work Sites or participated in certain nuclear weapons tests, and who meet other additional requirements under The Act. An individual member (or the eligible survivors of a member) of a class of employees included in the SEC is entitled to compensation without having to undergo a dose reconstruction performed for his or her case by NIOSH, or to have a decision by DOL as to whether the cancer was "at least as likely as not" caused by occupational exposure to radiation, as is required for other cancer claims covered by The Act.

In addition to establishing the SEC, Congress allowed for additional classes of employees to be added to the SEC under certain circumstances. The responsibility for adding classes of employees to the SEC was assigned to the Secretary of Health and Human Services (HHS). HHS used rulemaking procedures, which included the opportunity for the public to provide comments, to establish procedures for HHS to make decisions on whether to add classes of employees to the SEC. DCAS is responsible for collecting and evaluating petitions for the Secretary of HHS' consideration when determining whether or not to add groups of employees to the SEC. NIOSH is responsible for accepting petitions to add classes of employees to the SEC under EEOICPA.

---

1 The "live" data from which these numbers were taken is constantly changing, but for the purposes of this report will be as of April 16, 2010 unless otherwise noted.

2 A class of employees is defined in the regulation as a group of employees who work or worked at the same Department of Energy (DOE) facility or Atomics Weapon Employer (AWE) facility, and for whom the availability of information and recorded data on radiation exposures is comparable with respect to the informational needs of dose reconstructions under the dose reconstruction regulation.
Timeliness

November, 2010

SEC Process
New Special Exposure Cohort classes are initiated either by NIOSH or by petition from claimants or their representatives. NIOSH prepares evaluation reports for all petitions that qualify for evaluation. NIOSH may agree with the petitioners that facility data are too limited for dose reconstruction to be feasible, propose revisions to the time period or workers covered by the proposed petition, or propose methods of remedying the effect of limited data on dose reconstructions.

The petitioners and the Advisory Board are notified when a petition meets the minimum requirements and NIOSH proceeds with an evaluation of the petition. The evaluation of a qualified petition includes in-depth research on the available monitoring records and worker data to determine if NIOSH has the information needed to reconstruct radiation doses with sufficient accuracy and if it does not, whether the radiation doses may have endangered the health of the class of workers defined in the petition. In this process, NIOSH may uncover new information that confirms, refutes, or supplements the information in the petition and the existing information in NIOSH’s database.

The results of the evaluation are given to the Advisory Board for review. During one of its regular meetings, the Advisory Board evaluates the review, hears from the petitioners if they choose, and reviews any other information the Advisory Board determines is appropriate for the petition. The Advisory Board deliberates on whether to recommend a class be added to the SEC, and submits its recommendation (to accept or deny the petition) to the Secretary of HHS.

The Director of NIOSH prepares a proposed decision for the Secretary of HHS, taking into consideration the NIOSH findings and the Board’s recommendation. The petitioners are notified of the proposed decision.

The final decision to add or deny a class to the SEC is made by the Secretary of HHS, after considering information and recommendations provided by NIOSH and the Advisory Board. Petitioners can only contest the Secretary’s final decision to deny adding a class to the SEC or a health endangerment determination.

The Secretary submits any final decision to add a class to the SEC to Congress for review. If Congress takes no action that reverses or expedites the Secretary’s decision, it will take effect 30 calendar days after the date the Secretary’s report is submitted to Congress. The Secretary provides a report to DOL and the petitioners containing the definition of the class and either the addition of the class to the SEC or the result of any action by Congress to reverse or expedite the decision.
The findings and conclusions expressed in this draft report are those of the author(s) and do not necessarily represent the views or position of the National Institute for Occupational Safety and Health (NIOSH), the Centers for Disease Control and Prevention (CDC), or the Department of Health and Human Services (HHS). Any statutory, regulatory, or other legal interpretation included in this draft report is outside the scope of this review and should not be construed to represent the official position of HHS, CDC, or NIOSH. This document is one of many factors that the Director of NIOSH may consider in the ten-year review of NIOSH's performance under the Energy Employees Occupational Illness Compensation Program.

Timeliness

83.13 SEC Process

42 C.F.R. § 83.13 states that it is feasible, in two situations, to estimate the radiation dose that the class received with sufficient accuracy. First, the rule states that radiation doses may be estimated with sufficient accuracy if NIOSH has established that it has access to sufficient information to estimate the maximum radiation dose for every type of cancer for which radiation doses are reconstructed that could have been incurred under plausible circumstances by any member of the class. Alternatively, radiation doses may be estimated with sufficient accuracy if NIOSH has established that it has access to sufficient information to estimate the radiation doses of members of the class more precisely than a maximum dose estimate. NIOSH will make a recommendation to include a class of workers in the SEC when: (1) it is not feasible to estimate with sufficient accuracy the radiation dose that the class received; and (2) there is a reasonable likelihood that such radiation dose may have endangered the health of members of the class. These are referred to or known as Form B Petitions.

83.14 SEC Process

42 C.F.R. § 83.14 permits a NIOSH-initiated SEC petition when NIOSH has attempted to conduct a dose reconstruction for a cancer claimant and finds that the dose reconstruction cannot be completed because there is insufficient information to estimate the radiation doses of the claimant with sufficient accuracy. When NIOSH reaches this conclusion, it notifies the claimant and provides information to the claimant about the SEC petitioning process. NIOSH assists the claimant in completing the SEC petition for qualification. These are also referred to or known as Form A Petitions.
The findings and conclusions expressed in this draft report are those of the author(s) and do not necessarily represent the views or position of the National Institute for Occupational Safety and Health (NIOSH), the Centers for Disease Control and Prevention (CDC), or the Department of Health and Human Services (HHS). Any statutory, regulatory, or other legal interpretation included in this draft report is outside the scope of this review and should not be construed to represent the official position of HHS, CDC, or NIOSH. This document is one of many factors that the Director of NIOSH may consider in the ten-year review of NIOSH's performance under the Energy Employees Occupational Illness Compensation Program.

Timeliness

November, 2010

Petition Evaluation

NIOSH has 180 days to provide a recommendation to the Advisory Board regarding qualified SEC petitions. The 180 day time frame begins when NIOSH receives a petition and ends when NIOSH sends the SEC Petition Evaluation Report of that petition to the Advisory Board. This time does not include days when the petitioner is working on a response to a deficiency in the petition that affects the qualification of the petition or on clarification of information for qualifying the petition.

There are circumstances where NIOSH is unable to meet the 180-day time frame. This is most often due to data capture problems, either where a facility is having difficulty locating or assembling the records requested, or where DOE does not have the resources available to process the data. Because the evaluation of a qualified petition includes in-depth research on the available monitoring records and worker data to determine if NIOSH has the information needed to reconstruct radiation doses with sufficient accuracy, and if it does not, whether the radiation doses may have endangered the health of the class of workers defined in the petition. Additional time to evaluate the petition may occur when a petition covers a very broad time frame. In this situation research may take longer than 180 days. NIOSH's evaluation may also go well beyond the issues the petitioner identified in the petition. A petition might have identified a small number of issues to qualify, but based upon review of past Evaluation Reports, other issues under review by the Advisory Board and its technical contractor, and issues that may arise during NIOSH's site research, all these add to the list of issues to be researched during the evaluation.

This process allows NIOSH to make a thorough investigation of potential reasons that it might not be able to complete dose reconstructions with sufficient accuracy and determine if the radiation doses may have endangered the health of the class of workers.

Advisory Board Recommendation to HHS

No formal timeframes have been placed on the Advisory Board to submit a recommendation to the Secretary of HHS. The Board, however, has informally agreed to submit its recommendation to the Secretary within 21 days after the determination by the Advisory Board of their recommendation.
The findings and conclusions expressed in this draft report are those of the author(s) and do not necessarily represent the views or position of the National Institute for Occupational Safety and Health (NIOSH), the Centers for Disease Control and Prevention (CDC), or the Department of Health and Human Services (HHS). Any statutory, regulatory, or other legal interpretation included in this draft report is outside the scope of this review and should not be construed to represent the official position of HHS, CDC, or NIOSH. This document is one of many factors that the Director of NIOSH may consider in the ten-year review of NIOSH’s performance under the Energy Employees Occupational Illness Compensation Program.

II. Outline of this Timeliness Section

Phase I Reports are Data Driven assessments of NIOSH’s performance. Following the data driven assessment the author will present observations and conclusion drawn from the data presented. In this Phase I Report on the Timing of Program Task Accomplishments, six (6) subsections will be presented each consisting of a data presentation followed by observations and conclusions. The six subsections are:

1. Timeliness of Task Accomplishments – Dose Reconstruction
   
   1. Statistics concerning the number and time to complete individual dose reconstructions.
      a. Initial Submissions
      b. The Timing of initial Submissions vs. Returns

   2. Statistics concerning the number and time to complete individual dose reconstructions by dose estimation type
      a. Number of Claims
      b. Time to Complete Claims

2. Timeliness of Task Accomplishments – Step in Dose Reconstruction Process

   1. Initial Dose Reconstruction – Average Number of Days
      a. Initial DOE Request
      b. Initial Computer Assisted Technical Interview (CATI) Scheduled
      c. Initial CATI Summary
      d. Initial DR Draft
      e. Initial DR Final
      f. Approval of Draft DR
      g. Draft DR to Claimant
      h. DR Draft to DR final

   2. Dose Reconstruction Rework – Average Number of Days
      a. Complete Rework
      b. Rework Receipt to Draft DR
      c. Rework DR Draft to Rework DR Final
The findings and conclusions expressed in this draft report are those of the author(s) and do not necessarily represent the views or position of the National Institute for Occupational Safety and Health (NIOSH), the Centers for Disease Control and Prevention (CDC), or the Department of Health and Human Services (HHS). Any statutory, regulatory, or other legal interpretation included in this draft report is outside the scope of this review and should not be construed to represent the official position of HHS, CDC, or NIOSH. This document is one of many factors that the Director of NIOSH may consider in the ten-year review of NIOSH’s performance under the Energy Employees Occupational Illness Compensation Program.

3. Timing of Task Accomplishments – SEC Petitions

1. Time to complete steps leading up to the completion of an 83.13 SEC Petition
   a. Qualification Complete
   b. Evaluation Report Complete

2. Time to complete steps leading up to the completion of an 83.14 SEC Petition
   a. Pre Qualification of Petition
   b. Qualification Complete
   c. Evaluation Report Complete

4. Deaths of Claimants while in the NIOSH Program

5. Recent efforts by NIOSH to Reduce the Backlog of DR held more than One Year

6. Comments made to the Docket
The findings and conclusions expressed in this draft report are those of the author(s) and do not necessarily represent the views or position of the National Institute for Occupational Safety and Health (NIOSH), the Centers for Disease Control and Prevention (CDC), or the Department of Health and Human Services (HHS). Any statutory, regulatory, or other legal interpretation included in this draft report is outside the scope of this review and should not be construed to represent the official position of HHS, CDC, or NIOSH. This document is one of many factors that the Director of NIOSH may consider in the ten-year review of NIOSH’s performance under the Energy Employees Occupational Illness Compensation Program.

Timeliness

November, 2010

Timing of Task Accomplishments - Dose Reconstruction

1. Statistics concerning the Number and Time to Complete Individual Dose Reconstructions

   a. Initial Submissions

As of this writing 25,833 claims (initial versions) have been received from and submitted to DOL. Table 1 lists the number of such initial receipts based upon the year the claim was received by NIOSH as well as the year the Claim was submitted to DOL.

**Author’s Observations and Conclusions:**

1. The number of initial claims received per year is declining from a high of 8967 received in 2002 to 2308 received in 2009.

2. The average time that an initial claim is with NIOSH is also declining from 1011 days for a claim received in 2002 to 189 days for a claim received in 2009.

3. It is reasonable to assume that the number of claims received in future years will likely be more like the number received in 2008 and 2009 as opposed to 2002. This should free up resources that can be applied to completing claims in a shorter time. NIOSH should set aggressive targets for the average time that an initial claim is with NIOSH. Any such target needs to take into account allowing for a reasonable amount of time to secure the appropriate records from DOE and others. As for NIOSH’s part of completing the dose reconstruction once the information is in hand, a target of 90 days or less should be considered.
The findings and conclusions expressed in this draft report are those of the author(s) and do not necessarily represent the views or position of the National Institute for Occupational Safety and Health (NIOSH), the Centers for Disease Control and Prevention (CDC), or the Department of Health and Human Services (HHS). Any statutory, regulatory, or other legal interpretation included in this draft report is outside the scope of this review and should not be construed to represent the official position of HHS, CDC, or NIOSH. This document is one of many factors that the Director of NIOSH may consider in the ten-year review of NIOSH’s performance under the Energy Employees Occupational Illness Compensation Program.

Timeliness

Author’s Observations and Conclusions:

1. It is reasonable that the time that NIOSH holds a returned claim should be less than the time NIOSH holds an initially submitted claim. Two reasons for this are, first a returned claim may well be the result of an additional cancer meaning that the claimant is experiencing deteriorating health and second the claimant of a returned claim has already been in the system for some time and therefore is understandably anxious to have their case completed.

2. In all years but 2008 the average time to complete an initial claim is longer than the average time to complete a returned claim.

3. In settings its goals for the timely completion of claims NIOSH should give a higher priority to returned claims.
2. **Statistics concerning the number and time to complete individual dose reconstructions by dose estimation type**

   a. **Number of Claims**

   Figure 1\(^3\) shows the number of initial claims that have been completed using Full Best Estimate Techniques, the term Full Best Estimate means that the dose reconstruction involved a Best Estimate determination for both internal and external dose, Overestimating Techniques and Underestimating Techniques. Initial claims were chosen for display as they better reflect NIOSH's choice of dose estimation technique when a claim is first encountered.

---

**Figure 1: Initial Claims Overall**

In total, 8.0% of claims have been worked by Full Best Estimate Techniques, 22.5% by Underestimating Techniques, and the majority, 69.0% by Overestimating Techniques.

---

\(^3\) The null bar captures claims that were worked before records were kept of such designations
The findings and conclusions expressed in this draft report are those of the author(s) and do not necessarily represent the views or position of the National Institute for Occupational Safety and Health (NIOSH), the Centers for Disease Control and Prevention (CDC), or the Department of Health and Human Services (HHS). This document is one of many factors that the Director of NIOSH may consider in the ten-year review of NIOSH’s performance under the Energy Employees Occupational Illness Compensation Program.

Timeliness

November, 2010

Figure 2 shows the number of initial claims work by the different dose reconstruction techniques per year from 2001 until 2009. For this Figure, the year represents the year in which the claim was received from DOL and not the year in which NIOSH sent the completed dose reconstruction back to DOL.

The year received was selected for display as the author feels this is more informative than using the year submitted to explore trends in NIOSH's use of dose reconstruction techniques, as a claim received in 2004 might not be submitted in 2004 or later for a number of reasons not related to the choice of Dose Estimate Technique.

Contrasting 2002, a year in which the dose reconstruction program was fully operational to 2008, the last year for which there are complete data indicates that the use of the Full Best Estimate Technique has increased from 7.8% in 2003 to 11.3% in 2008, note the percentage of Full Best Estimate Technique dose reconstruction in 2003 was 5.3% of the total for that year.

Author’s Observations and Conclusions:

1. The author was struck by the heavy use of Overestimating Techniques; however there is no evidence to suggest that Overestimating Techniques were used inappropriately.

2. It is not surprising that use of the Full Best Estimate Technique is increasing as the “easier” to complete Dose reconstructions are completed leaving the “more” difficult dose reconstructions that would require the Full Estimation Technique. One might has suspected that the percentage increase would have been larger than it actually is.

**Author’s Observations and Conclusions:**

1. Both Figure 4 and Table 5 point out the significant improvements that have been made in the time to complete individual dose reconstructions.

2. While Full Best Estimate dose reconstructions take longer, as measured by calendar time passed, than Overestimates and Underestimates (in the majority of years evaluated) that difference is not that great particularly in recent years, 2006 through 2008. For that reason NIOSH needs to explore whether or not it should continue to use Overestimating and Underestimating techniques given the confusion that their use causes with claimants (see Author’s Comment 3 in section 1 above). Note: At this writing the author did not have data to determine the man hours consumed by the various types of Dose Estimate Techniques, such data would need to be considered in making any decisions on the continued use of Overestimating and Underestimating Techniques.

\(^8\) The null captures claims that were worked before records were kept of such designations
The findings and conclusions expressed in this draft report are those of the author(s) and do not necessarily represent the views or position of the National Institute for Occupational Safety and Health (NIOSH), the Centers for Disease Control and Prevention (CDC), or the Department of Health and Human Services (HHS). Any statutory, regulatory, or other legal interpretation included in this draft report is outside the scope of this review and should not be construed to represent the official position of HHS, CDC, or NIOSH. This document is one of many factors that the Director of NIOSH may consider in the ten-year review of NIOSH’s performance under the Energy Employees Occupational Illness Compensation Program.

Timeliness

3. Timeliness of Task Accomplishments - Steps in Dose Reconstruction Process

1. Initial Dose Reconstruction

The following pages chart the time periods between various distinct steps in the NIOSH Dose Reconstruction process. Each chart shows the average time to complete one of the DR steps. Figure 1 shows that the time for NIOSH to make and initial request to DOE for data to initiate a dose reconstruction has dropped from an average of 68 days in 2001 to 5 days in 2010.

### November, 2010

Timeliness

Figure 4 shows that the average number of days for NIOSH to complete the initial draft of a DR from the date of the initial receipt of claim has dropped from 1089 days in 2001 to 53 days in 2010. There was a slight increase to an average of 374 days in 2007 from 259 days in 2006.  

**Figure 4**  
Average Days to Draft Initial DR

![Average Days for Initial DR Draft](image)

Figure 5 shows the average number of days for NIOSH to complete the Initial Final DR from Initial Receipt of Claim has dropped from 1117 in 2001 to 76 in 2010. There was a slight increase in 2006 from an average of 58 days in 2005 to 67 days in 2006.  

**Figure 5**  
Average Days from Initial to Final DR

---

9 Increases in timeliness occurred between 2006 and 2007 when DOL returned a large number of claims and resulted in a large impact on available NIOSH’s resources. See Figure 12.

Timeliness

November, 2010

| Claim Receipt Back to DOL | 1117 | 483 | 208 |

Author’s Observations and Conclusions:

1. The trend from 2001 to 2009 in the duration or timeliness of process for the most part is downward. The data shows blips upward when there is an influx of claims, above “normal,” such as during 2007 when DOL sent back a significant number of claims to be reworked, and available resources remain the same. (See Figure 15)

2. It seems reasonable after the initial start up in 2001, that the largest amount of time a claim is in the NIOSH DR process is during the time it takes to draft the initial DR and again the time it takes to complete the final DR.

3. There are still efficiency measures in the DR process that have not been fully explored to decrease the time a claimant waits for their DR.
The findings and conclusions expressed in this draft report are those of the author(s) and do not necessarily represent the views or position of the National Institute for Occupational Safety and Health (NIOSH), the Centers for Disease Control and Prevention (CDC), or the Department of Health and Human Services (HHS). Timeliness

2. Timing of Task Accomplishments – SEC Petitions

When reviewing the following information on the Timeliness of the SEC Process, it is important to note that EEOICPA was amended on October 28, 2004, by language contained in the Ronald W. Reagan National Defense Authorization Act (DAA) for Fiscal Year 2005, Public Law 108-375. Among the amendments included in the DAA was the 180-day clock for completing NIOSH SEC Evaluation Reports. NIOSH issued an interim final rule on December 22, 2005, to make the changes to our SEC rule that were necessary due to the DAA amendments that had been made to the statute. That interim final rule was published in the FR: Vol. 70, No. 245 beginning on page 75949.

(e) The NIOSH report under paragraph (d) of this section shall be completed within 180 calendar days of the receipt of the petition by NIOSH. The procedure for computing this time period is specified in § 83.5(c). In addition, the computing of 180 calendar days shall not include any days during which the petitioner may be revising the petition to remedy deficiencies identified by NIOSH under § 83.11(a) or (b), nor shall it include any days during which the petitioner may request a review of a proposed finding under § 83.11(c) or during the conduct of such a review under § 83.11(d).

Prior to this change there was not a 180 day limit on the time for NIOSH to complete an SEC Evaluation Report. SEC Petitions 1 through 65 were evaluated prior to a change in EEOICPA. This amendment shortened the HHS approval clock from 180 days in the original law to the 30 day timeframe it is now. SEC Petitions from 66 forward reflect the changes in approval times.

Petitions 1-65: The 180 Working Day Clock started the day a petition qualified for evaluation.
The findings and conclusions expressed in this draft report are those of the author(s) and do not necessarily represent the views or position of the National Institute for Occupational Safety and Health (NIOSH), the Centers for Disease Control and Prevention (CDC), or the Department of Health and Human Services (HHS). 12 Data as of April 16, 2010
1. Time to Complete Steps Leading Up to the Completion of an 83.13. SEC Petition

The graph in Figure 18 for petitions 1 - 65 shows the number of days for each process for 83.13 petitions that qualified for evaluation. Petitions 43, 46, and 58 are currently with the Board.

Figure 18 SEC 83.13 Petition Process Times [Days]

SEC 83.13 Petition Process Times
Qualified for Evaluation Petitions 6 - 59

The 180 working day clock began the day the petition qualified for evaluation and stopped the day the Evaluation Report was sent to the Board. Ref: FRN Vol. 70, No. 245, Thursday, December 22, 2005 "Interim Rule."
The findings and conclusions expressed in this draft report are those of the author(s) and do not necessarily represent the views or position of the National Institute for Occupational Safety and Health (NIOSH), the Centers for Disease Control and Prevention (CDC), or the Department of Health and Human Services (HHS). Any statutory, regulatory, or other legal interpretation included in this draft report is outside the scope of this review and should not be construed to represent the official position of HHS, CDC, or NIOSH. This document is one of many factors that the Director of NIOSH may consider in the ten-year review of NIOSH’s performance under the Energy Employees Occupational Illness Compensation Program.

**Timeliness**

November, 2010

The graph in Figure 19 shows the number of days for each process for 83.13 petitions, which qualified for evaluation, for petitions 66 - 173.

Petitions 154, 155, 157, 162 and 173 are currently in Evaluation Process.

Petitions 68, 88, 103, 105, 107, 109, 116, 131, 136, 139, 141, 143, 164 and 166 are currently with the Board.

This document is one of many factors that the Director of NIOSH may consider in the ten-year review of NIOSH's performance under the Energy Employees Occupational Illness Compensation Program.

Timeliness

November, 2010

Author’s Observations and Conclusions:

1. Overall when NIOSH determines it is not able to reconstruct dose at a site, they have increased their process efficiency and move an 83.14 Petition from Pre Qualification to completed Evaluation Report in a timelier manner.

2. The data reflects a more effective communication process with a petitioner for an 83.14 petition.

3. NIOSH experienced a significant lag time in the claimant information data capture process necessary in the SEC Qualification process during 2007. This lag time resulted from the government wide response to the theft of Personal Identifying Information (PII), from a Federal government computer. This event corresponds to the spike in the timeliness of the 83.14 process during 2007.
The findings and conclusions expressed in this draft report are those of the author(s) and do not necessarily represent the views or position of the National Institute for Occupational Safety and Health (NIOSH), the Centers for Disease Control and Prevention (CDC), or the Department of Health and Human Services (HHS). Timeliness

November, 2010

4. Deaths of claimants while in the NIOSH Program

The data below speaks for itself. From the beginning of the Program until May 26, 2010, when the data was run, 2212 workers have passed away after NIOSH received their initial claim from DOL. 340 of the 2212 workers passed away after NIOSH received their initial claim and before their CATI was scheduled.

Timeliness

November, 2010

5. Recent NIOSH Efforts to Reduce the Backlog of Individual Dose Reconstructions

In June 2009 the NIOSH Director instituted a management objection to complete all individual dose reconstructions that NIOSH would have in its possession on June 1, 2010 that would be more than one year old.

Table 1 shows the number of dose reconstruction in NIOSH’s possession for longer than one year on June 1, 2009.

Table 1. Number of claims at NIOSH on June 1, 2009

| Initial Claims | 2,711 |
| Rework Claims | 1,600 |
| Total Claims | 4,311 |

Table 2 shows the number of dose reconstruction in NIOSH’s possession for longer than one year on June 1, 2010.

Table 2. Number of claims from Table 1 that remained at NIOSH on June 1, 2010

| Initial Claims | 229 |
| Rework Claims | 33  |
| Total Claims | 262 |

During the twelve months between June 2009 and June 2010, NIOSH completed 4049 claims older than one year. 2482 were initial claims and 1567 were Reworks. The 262 remaining were a mix of claims that were affected by the SEC class recommendations the Board made at its May 2010 meeting, those awaiting DOE response for supplemental data, and about 85 that were affected by the Board declining to recommend an 83.14 class recommended by NIOSH for GE Evendale.

Table 3 shows the current number of dose reconstruction claims and their time in NIOSH possession. [Data is current as of July 2, 2010.]

<th>849</th>
</tr>
</thead>
<tbody>
<tr>
<td><strong>Total</strong></td>
<td><strong>2,401</strong></td>
</tr>
</tbody>
</table>

Time at NIOSH is measured from date of latest referral or return from DOL.

### Author’s Observations and Conclusions:

1. A comparison of the data in Tables 1 and 2 demonstrates that it is possible to complete dose reconstructions in less than one year.

2. A comparison of the number of dose reconstructions remaining as of June 2010 with the number of dose reconstructions that were completed between June 1, 2009 and June 1, 2010, convinces the author that it should be possible to have no claims in hand older than one year or at a defined target considerably less than one year.

3. NIOSH Leadership should consider establishing such a target of six months or less.
The findings and conclusions expressed in this draft report are those of the author(s) and do not necessarily represent the views or position of the National Institute for Occupational Safety and Health (NIOSH), the Centers for Disease Control and Prevention (CDC), or the Department of Health and Human Services (HHS). Any statutory, regulatory, or other legal interpretation included in this draft report is outside the scope of this review and should not be construed to represent the official position of HHS, CDC, or NIOSH. This document is one of many factors that the Director of NIOSH may consider in the ten-year review of NIOSH's performance under the Energy Employees Occupational Illness Compensation Program.

Timeliness

6. Comments Made to the Docket on Timeliness

A docket was held opened on the NIOSH website to receive public comments related to the Ten Year Review. Many excellent comments were received. All public comments will be contained in their entirety in the Appendix to the Phase I Report. In this section on Timeliness I have included all of the excerpts of comments that I think directly related to Timeliness. These comments are included to provide the Phase II authors with all related Timeliness materials in this section.

I will not offer opinion on the excerpts presented. It is possible that the Phase II authors may wish to expand or modify the Phase I report based upon their consideration of public comments.

EXCERPT #1

1. Timeliness: Are claims processed in a timely manner?
   o What is the duration from receipt to closure (by sites, type of cancer, occupation, time period of exposure, etc?) NOTE: Closure means either a POC determination or a referral to SEC?
   o What is the duration from time an SEC petition is received until it is adopted or rejected by NIOSH?

   The timing of the accomplishment of NIOSH's program tasks.

   Whatever timeliness means, it is not the 3-6 years it has taken NIOSH to complete a DR or the 2-4 years to review a SEC petition.

   This is one of the most difficult criterions to define, since (except for the review of SEC petitions) neither the law nor NIOSH's regulations establish any enforceable time limit. NIOSH has consistently refused to set time limits on its duties or where one exists (such as for the review of SEC petitions), it has been routinely been ignored. Unless NIOSH sets a time limit, how can timeliness be evaluated?

   In its review, NIOSH should determine if claims have systematically been placed on the “backburnner” because DCAS lacks data to process them. The review should determine and identify any disparities in any group of claimants. Also, the underlying documents used in the DR process, such as site profiles, should be reviewed.

   In CPWR's employment verification contract with DOL to research union records that produce employment verification evidence on claimants for which DOE cannot establish an employment relationship, CPWR has 30 business days from the time it gets the claim to produce whatever it can.
The findings and conclusions expressed in this draft report are those of the author(s) and do not necessarily represent the views or position of the National Institute for Occupational Safety and Health (NIOSH), the Centers for Disease Control and Prevention (CDC), or the Department of Health and Human Services (HHS). Any statutory, regulatory, or other legal interpretation included in this draft report is outside the scope of this review and should not be construed to represent the official position of HHS, CDC, or NIOSH. This document is one of many factors that the Director of NIOSH may consider in the ten-year review of NIOSH’s performance under the Energy Employees Occupational Illness Compensation Program.

**Timeliness**

NIOSH should have an established time limit as well and it should not be a “goal.” DCAS should be able to complete a DR in 90 days from the time it receives the case. If it can’t get it done in that time period, then it should refer the case to the SEC.
The findings and conclusions expressed in this draft report are those of the author(s) and do not necessarily represent the views or position of the National Institute for Occupational Safety and Health (NIOSH), the Centers for Disease Control and Prevention (CDC), or the Department of Health and Human Services (HHS). Any statutory, regulatory, or other legal interpretation included in this draft report is outside the scope of this review and should not be construed to represent the official position of HHS, CDC, or NIOSH. This document is one of many factors that the Director of NIOSH may consider in the ten-year review of NIOSH’s performance under the Energy Employees Occupational Illness Compensation Program.

Timeliness

November, 2010

Excerpt #2

Comment #2: Timeliness of SEC Evaluations – Regulatory Time Constraints of Evaluation Reports

The Linde Ceramics SEC Action Group is currently involved in the evaluation of its SEC petition covering the residual radiation period at the Linde Ceramics facility. There has been an ongoing concern about the ability for DCAS to revise SEC Evaluation Reports (ER) ad infinitum and well beyond the regulatory 180 day deadline specifically delineated at 42 CFR 83.13. The ability for DCAS to revise ERs well beyond the 180 day deadline unfairly penalizes petitioners. Why is DCAS permitted to revise ERs continually and then present the final revised ER to the Advisory Board for the Board’s evaluation? It is understandable that ERs should be revised to benefit petitioners, however the recommendation that DCAS submits to the Board for the Board’s final evaluation of the viability of any SEC should be limited to the original ER issued by DCAS at the 180 day deadline prescribed at 42 CFR 83.13. DCAS should not be permitted to go beyond the regulatory deadline for the issuance of an ER when such latitude creates a detriment to the petitioner’s best interests and an imbalance in the capacity a petitioner has to defend against DCAS’s recommendation.

In conclusion, the Linde Ceramics SEC Action Group very much appreciates the opportunity to address these matters with NIOSH and we ask that the foregoing issues be addressed specifically within the ten year EEOICPA review.

Excerpt #3

The timing of the accomplishment of NIOSH’s program tasks. For example, have dose reconstructions been completed in as timely a manner as possible? Have completed dose reconstructions been timely reported to the U.S. Department of Labor?

Answer to question #1. Completion times for DRs at various sites I am aware of have been strikingly different. A pattern is not discernible. The scientific rationale and scheduling to complete DRs at various sites is hard to discern or fathom.

At GSI I began giving NIOSH detailed source information in mid-2005 and dose reconstructions were not started until mid-2007. Only 4 DR had been completed up until that time, and 3 of the 4 turned out to be at another ineligible site in Granite City, IL (see PER-24). GSI workers, site experts and the petitioners strongly objected to use of Appendix BB when it first appeared and urged NIOSH to either revise Appendix BB to correct glaring errors, or as recommended by then Senator Obama, recommend an 83.14 SEC for GSI. NIOSH instead went ahead and completed DRs and now faces reopening many or all denied GSI claims as Appendix
The findings and conclusions expressed in this draft report are those of the author(s) and do not necessarily represent the views or position of the National Institute for Occupational Safety and Health (NIOSH), the Centers for Disease Control and Prevention (CDC), or the Department of Health and Human Services (HHS). Any statutory, regulatory, or other legal interpretation included in this draft report is outside the scope of this review and should not be construed to represent the official position of HHS, CDC, or NIOSH. This document is one of many factors that the Director of NIOSH may consider in the ten-year review of NIOSH's performance under the Energy Employees Occupational Illness Compensation Program.

**Timeliness**

**November, 2010**

BB has never been revised since 2007. By now 250 (94.3%) of 265 GSI DRs have been completed.

**DRs at Dow Madison** were not started until well after the 83.14 SEC had been recommended for 1957-60 in 2006-7. It took months to do any partial DRs for the SEC Class who didn’t have one of the 22 specified cancers. Other DRs were not done until 2008 through now, at which time 115 (65.3%) of 176 Dow DRs have been completed.

**DRs at Texas City Chemicals.** Only 2 of 17 DRs had been completed when I first began interacting with the TCC site in 2006 and the same situation exists today. I have written to DCAS twice recently asking why TCC DRs are not being completed in light of the NIOSH recommendation to deny SEC-00088 and their claim it is feasible to reconstruct DRs with sufficient accuracy. Why then are the remaining small number of 15 DRs not finished? To date only 2/17 (11.8%) of TCC DRs have been completed out of 17 cases referred to NIOSH.

**Answer to question #2.** Completed DR have been reported to DOL in a timely manner as far as I am aware.
